Agricultural.

Seasonable and Important to Cow Owners.

I am, after a long silence, happy to report that I am by the mercy of God still able and ever willing to communicate, through your stable and reliable old journal, my experience and observation in any and all the practical matters pertaining to that great National interest to which my well-lengthened life has been devoted. I deem it opportune at this time to drop a few suggestions relative to the management of Cows which are now generally about to go into their winter-quarters. I have observed in my travels among "farmers" that it is a very common practice, on the approach of cold weather, to turn their cows, which have fed only on the coarse and indigestible food which they have subsisted in a condensed, valuable and merchantable form, to shift for themselves, their food consisting of the coarse stalks and grass which they can find in the fence corners, or in the barnyard, the most valuable one being the water-soaked and weak, and often fermented or succulent to dry and indigestible food is often so good and so severe on them that they lose much, from gold, and fall off in their degree that under ordinary management they remain thin and weak all winter, and commence the following season so reduced that frequently the best of the season is lost before they recuperate on the pasture to a condition that enables them to yield a profitable return in milk. That this is bad economy must be apparent to all observers, yet it is a condition of things that may be seen on ordinary farm in the best dairy districts of the country, and it has been so for the past fifty years to my knowledge and probably will be so for hundreds of years more.

It is not only bad economy but it is harmefully cruel, and deserves to be condemned by all who possess a desire to exert an influence to prevent cruelty to animals; and it is to be hoped that those who practice it will be made to feel that they are a disgrace to a community possessing civilization, much more Christianization.

Cows require special care, protection and food at this season of the year. A sudden change of food should not be made, but as the pastures are rendered insipid, sour and unnutritious by the effects of frost, they should be daily supplied with palatable, nutritious food, such as turnips, apples root-foliage and chopped stalks and blades of corn, or fine second growth hay, and they should be sheltered at night and in stormy weather as carefully as they would be in the most severe weather in winter. Rain-storms of autumn have more suffering in domestic animals exposed to them than the blasts of mid-winter. Their coats have not become fully grown, nor have they become inured to the cold, and they require the special care and protection that I have claimed at this season. The stage of pregnancy in the cow at the time she is dried for milk, is so far advanced that it requires all the good nutritious food she is capable of consuming to nourish her physical condition and nourish properly the fetus; she also requires much care and kindness during the latter portion of the period of pregnancy as she does upon food.

Food and Tepid Water.—I have made many careful experiments with feeding cows, when dry, the warm food and by taking the chill from their water, and have always found it very profitable and economy. I formerly advocated cutting stalks, straw and coarse fodders, but my late experiments with boiling a thin slop of proportions of corn-meal or rye meal and bran, (using steam for cooking it,) and applying the hot mess on chopped forage and allowing it to steep for twelve hours before feeding, have satisfied me that is much less expensive and more profitable.

I have also learned that it is better to supply the cow with rock-salt in the manger than put none in the feed or in the mows. I have known a considerable quantity of salt in the food to occasion very fatal consequences, such as violent and excessive thirst that the cow gorged herself with cold water to the extent that she did not recover to a normal condition for several weeks.

I could add a volume of relevant facts, but I know you do not like to be tedious, and I love to please. I will sign myself once more, A Farmer.—*Correspondent of German Telegraph.*

Preserving Machinery.—The saving in the operations of husbandry by use of modern implements and tools is equal to one half the cost of workings. By the improved plough, labor equivalent to that of three horse in three is saved. A bushel of drills two bushels of seed as far as three bushels broadcast. The plants in rows, and may be tended by horse hoes; being in the bottoms of little furrows, the ground crumbles down against the plant, which is not readily *heaved out* by the winter's frost. The reaping machine is a saving of more than one-third of the labor when it cuts and rakes, and will eventually save fully three-fourths when it is made to bind automatically, as it shortly will be. The threshing machine is a saving of one-tenth on the old hand flail mode. Root-cutters for stock in England, and in some places in the Northern States and Canada, much reduce the labor of winter feeding. The saving of the labor of handling hay in the field and barn by means of horse-rakes and horse hay-forks is equal to one-half. With the exception of the hand drill which had a precarious existence previous to 1776, all these improvements have been commenced and brought to the present relative perfection within the century now closing.—*Harper's Magazine.*

Preserving Eggs.—The *Advertiser*, London, Ontario, recently offered a prize for the best method of keeping eggs over winter. The receipt given below took the prize:—"Water excludes the air from the pores of the egg. When an egg is laid it should be dipped into a quantity of water sufficient to place a quarter of an inch above the egg. Then take the left hand and turn the water in the egg, so that every pore shall be closed; then dry a sufficient quantity of bran in an oven or by the fire, and when you have the bran well dried, or it will rust,) Then pack it with the small ends down, a layer of bran and another of eggs, in your box is full; then place in a cool, dry place. If done when new laid, they will retain the sweet milk and curd of a new laid egg for at least eight or ten months. Any oil will do, but salt butter never becomes rancid, and a very small quantity of butter will do a very large quantity of eggs. To insure freshness I rub them when gathered in from the nests; then pack when there is a sufficient quantity."

In connection with the above, and meals at all hours of the day.

D. W. SCOTT & CO.

Towanda, Feb. 10, 1874.

APPLETONS' AMERICAN CYCLOPÆDIA.

NEW REVISED EDITION.

Entirely rewritten by the ablest writers on every subject. Printed from new type, and illustrated with Several Thousand engravings and Maps.

The work originally published under the title of THE NEW AMERICAN CYCLOPÆDIA was completed in 1863, since which time the wide circulation which it has attained in all parts of the United States, and the signal developments which have taken place in every branch of science, literature and art, have induced the editors and publishers to submit it to an exact and thorough revision, and to issue a new edition entitled THE AMERICAN CYCLOPÆDIA.

Within the last ten years the progress of discovery in every department of knowledge has made a new work of reference an imperative want.

The movement of political affairs has kept pace with the discoveries of science, and their fruitful application to the industrial and useful arts and the convenience and refinement of social life. Great wars and consequent revolutions have occurred, involving national changes of peculiar moment. The civil war of our own country, which was at its height when the last volume of the old work appeared has happily been ended, and a new course of commercial and industrial activity has been commenced.

Large accessions to our geographical knowledge have been made by the indefatigable explorers of Africa.

The great political revolutions of the last decade, with the natural result of the lapse of time have brought into public view a multitude of new men, whose names are in every one's mouth, and of whose lives every one is curious to know the particulars. Great battles have been fought and important sieges maintained, of which the details are as yet preserved only in the newspapers or in the transient publications of the day, but which ought now to take their place in permanent and authentic history.

In preparing the present edition for the press, it has accordingly been the aim of the editors to bring down the information to the latest possible dates, and to furnish an accurate account of the most recent discoveries in science, of every fresh production in literature, and of the newest inventions in the practical arts, as well as to give a succinct, and original record of the progress of political and historical events.

The work has been begun after long and careful preliminary labor, and with the most ample resources for carrying it on to a successful termination.

None of the original stereotype plates have been used, but every page has been printed on new type, forming in fact a new Cyclopædia, with the same plan and compass as its predecessor, but with a far greater pecuniary expenditure, and with such improvements in its composition as have been suggested by longer experience and enlarged knowledge.

The illustrations which are introduced for the first time in the present edition, have been added, not for the sake of pictorial effect, but to give greater lucidity and force to the explanations in the text. They embrace all branches of science and of natural history, and depict the most famous and remarkable features of scenery, architecture and art, as well as the various processes of mechanics and manufactures. Regular instruction in drawing rather than embellishment, no pains have been spared to insure their artistic excellence; the cost of their execution is enormous, and it is believed they will find a welcome reception as an admirable feature of the Cyclopædia, and worthy of its high character.

This work is sold to Subscribers only, payable on delivery of each volume. It will be completed in sixteen large octavo volumes, each containing about 800 pages, fully illustrated with several thousand Wood Engravings, and with numerous colored Lithographic Maps.

PRICE AND STYLE OF BINDING.

In extra Cloth, per vol.,	$ 5,00
In Library Leather, per vol.,	6,00

Towanda, Pa., September 2d, 1874.

SUSQUEHANNA COLLEGIATE INSTITUTE.

The first winter term of this Institution will commence MONDAY, November 2, 1874, with the following list of experienced teachers:

EDWIN E. QUINLAN, PRINCIPAL,
Ancient Languages, Math and English Branches
E. L. BILLIS, A. B.,
Commercial, Mathematical and Scientific Branches.
MISS MARY E. MERRILL, PRECEPTRESS,
Common and Higher English.
MISS MAY I. MASON,
Common and Higher English.
MLLE J. LEQUIN,
French, Drawing and Painting.
MRS. O. A. BALDWIN,
Vocal Music.
MISS MINNIE C. HAWES,
Instrumental Music.

Classes will commence the study of Philosophy and other Sciences. The customary reorganization of classes will take place, in order that new students may be properly classified, and new classes will be started as the wants of the students may demand.

Special attention will be given to those students pertaining to a business education, that this demand made upon the school by students from the country may be fully provided for. An additional advantage will be an access, free of charge, to students of the school, to the evening school, which will probably commence with the opening of the term.

Special attention given to the preparation of boys for College. Regular instruction in Drawing and Vocal Music free of charge. Excellent advantages in Instrumental Music and voice culture.

Tuition from $4 to $10 per term. Board, including furnished rooms, lights, washing, &c., $40 per term.

For circular or further information, address or call upon the Principal, E. E. QUINLAN, at Towanda Pa.

MILLER FOX, Pres't. Board of Trustees.

BLOOD & CO.,

Still continue to manufacture their celebrated

HORSE POWERS & CLEANERS,

and will sell a better machine, for less money than can be had elsewhere in the world. We claim for our machines that they will do as much, or more, than any other, and are more durably built. We personally superintend our work and see that it is well down. We will send

DESCRIPTIVE CATALOGUES,

of our machines, on application.

ONE AND TWO HORSE POWERS,

One & Two Horse THRESHER & SEPERATORS, THRESHER and CLEANERS,

FANNING MILLS,

CIRCULAR AND DRAG SAW MILLS,

SAW AND GRIST MILL work done to order.

Give us a call before purchasing elsewhere.

BLOOD & CO.,

ATHENS, BRADFORD CO., PA.

THE NEW IMPROVED

REMINGTON SEWING MACHINE

AWARDED THE "MEDAL FOR PROGRESS."

AT VIENNA, 1873

THE HIGHEST ORDER OF "MEDAL" AWARDED AT THE EXPOSITION.

NO SEWING MACHINE RECEIVED A HIGHER PRIZE.

A FEW GOOD REASONS:

1.—A New Invention thoroughly Tested and secured by Letters Patent.

2.—Make a perfect lock stitch, alike on both sides, on all kinds of goods.

3.—Runs Light, Smooth, Noiseless and Rapid—best combination of qualities.

4.—Durable—runs for years without repairs.

5.—Will do all varieties of work and Fancy Stitching in a superior manner.

6.—Is Most easily Managed by the operator. Length of stitch may be altered while running, and the machine can be threaded without passing thread through holes.

7.—Design simple, ingenious, elegant, forming the stitch without the use of cog wheel gears, rotary cams or lever arms. Has the Automatic Drop feed, which insures uniform length of stitch at any speed. Has our new Thread Controller, which allows easy movement of needle-bar, and prevents injury to thread.

8.—Construction most careful and finished. It is now manufactured by the most skillful and experienced mechanics at the celebrated REMINGTON ARMORY, ILION, N. Y. PHILADELPHIA OFFICE, 629 ARCH STREET.

G. CLINTON GARDNER, Gen'l Supt.

DANIEL F. BEATTY & CO., or

BEATTY & PLATT'S

CELEBRATED GOLDEN TONGUE PARLOR ORGANS.

Are ranked by eminent musicians and distinguished men of honor in this country and in Europe, as the leading parlor organ now in use. We challenge any maker to equal them! For church, sabbath Schools, Lodges as well as the parlor, they have no equal. Testimonials and cards of honor are constantly being received in their favor. An offer. Where we have no agents we will allow any one wishing to purchase one of our organs, from agent's discount. Also to any responsible party willing to purchase one of our organs from a distance, and prefer to see and examine it before paying for it, the same will be granted them by sending us a recommendation from the cashier of your nearest bank, or some prominent man in your vicinity, and if the organ is not just as represented, we have the liberty to return it the same at our expense, we paying the freight both ways. It is with pleasure we introduce the GOLDEN TONGUE knowing that it will give universal satisfaction, as it possesses many advantages over all others. The tone is rich in fullness, and the deep vibration of sounds is evidence that it stands first as to merits of all musical instruments now in use.

We select a few abstracts from letters and editorials which we are constantly receiving in favor of our organs, and wish you to read them:

We cry "Eureka" for we found what we wanted.
J. P. WILBAR, Harrisburg, Pa.

I am pleased with the sweetness of its tone.
PROF. N. P. VAN LORANEE, Moline, Ill.

Pure as gold.—Daily Patriot.

Our musical critics call to see it. They are delighted with it. GEO. L. FREET, Altoona, Pa.

We would recommend it as excellent instrument for the musical world, for its fineness of tone.—Pittsburg Indiana Democrat.

Combines sweetness and strength in its tone.—Newstown Gaz-tte.

For quality, promptness and exquisite of tone they are unequalled. PROF. ROBT. HENCE

I can
