Agricultural.

WEARING OUT OF SOILS.—It is common to hear people in the far west boast that they can take crop after crop from their virgin soils for several successive years without imparing the general fertility thereof. This is ragarded as something marvelous and as something which could not occur in any other part of the world. It is, however, clear that this representation has been overdrawn. Only in the bottoms, such as that of the Muskingum, and Scioto, in Ohio, is there any great degree of permanence in this continual cropping, and this chiefly from the fact that fertilizing agents are brought down from the high lands about them. In the flat lands the stability of the great richness is little more than in the lands of the older States. In Ohio especially, lands once of superior quality for corn and wheat, have become so run down that they are given over to sheep-walks, as being the only sure thing at least the surest return that can be made from the land.

We can do nearly as much here in the east. We have known land near Philadelphia which has been under culture for perhaps a hundred years, produce corn six successful years in fair quantity, with no artificial aid but a little "shovelings," which means rich earth scraped together here and there and put in the hills when the corn is planted.

The fact is, land is pretty much the same all the world over in its adaption to certain crops. When things are forced to grow in land not well suited to their growth they soon fail, even when well-cared for; but when they find their natural element no great amount of artificial aid is required to keep the land in good condition for many years.

Even in the older countries of Europe, where land has been in cultivation for a thousand years, has this principle been found to hold good. Experiments have been made with some of the cereals—first selecting land known to be favorable to some special thing, and then by manuring annually lightly with material also known to be favorable to the plant. Crop after crop has been taken for twenty years, and the last has been as good as the first.

Yet with all these facts we often read of the question being discussed. Will soils wear out? We believe there is no such thing in nature. Some of the elements will of course be much diminished, and will need an occasional replenishing but we would not suppose our digestive organs had worn out because we feel hungry, and neither in any sensible light can we suppose soil will wear out.—*Germantown Telegraph.*

A CONVENIENT WAY TO MEASURE LAND.—It is frequently desirable to measure a given plot of ground or a portion of a field, and a simple method, such as the following, for which we are indebted to an exchange, will be of use to many of our readers. Surveyors are not always at a convenient distance to attend to such jobs, and even when they do reside in the immediate vicinity, one does not always care to incur the expense incident to such a small job. If the lines are already established, the plot can be measured with sufficient accuracy for all practical purposes by means of a neat rodpole, made as follows: Procure a stick of pine whitewood, basswood or almost any other timber, one and a half inches square and sixteen and a half feet long. Dress each end, tapering from the middle so that the pole will be one and a half inches square at the middle and about an inch square at each end. Such a pole will be light and quite stiff. Now graduate one side with the marks representing feet and inches, and graduate another side to indicate a surveyor's links. A pole one rod in length must be equal to twenty-five links. To divide one side correctly, let a mechanic's compass be adjusted, so that the points will divide the distance into twenty-five equal spaces or links. A line can be measured with such a pole nearly as accurately as with a surveyor's chain.

Now, then, if a person does not understand how to multiply chains and links, let him compute the measurement by square feet. In one acre there are 43,560 square feet. Any intelligent school boy can measure the length and bredth of a square plot, multiply one by the other, and divide the product by 43,560, which will give the number of acres, and the number of square feet representing the fraction of an acre. It is desirable to measure a triangular plot, two sides of which lie at right angles, measure these two sides, multiply the distance in feet one by the other, and divide that product by two, which will indicate the number of square feet, by 43,560, and the quotient will represent the number of acres.

FEEDING STOCK WITH PROFIT.—In theory a fattening animal cannot be overfed; but in practice the limit of excessive feeding is fixed by the animals powers of assimilation. The feeder must consider various circumstances, such as the quality of the food—for if it be rich and lavishly used a large quantity will be ejected in an undigested state—the state of the animal, his age and condition.—Less animal, for example, are unable to appropriate an enormous amount of highly nutrious food, and they are liable to very much upset if they are fed too fast until they have begun to move in the right direction. They should be kept on cheap and bulky food till their powers of assimilation have improved with their condition, when they should be pushed on more rapidly.

The art of fattening depends upon supplying an excess of food judiciously. A mature animal needs a certain amount of food to maintain him in store condition, and the greater the amount he can be induced to take over and above this fixed quantity the faster will the process of fattening proceed and the smaller will be the waste of that portion of food which goes merely to maintain life and which must, therefor, be lost, in a sense, to the feeder.

As a stimulant for plants one tablespoonful of Spirits of Hartshorn, or Ammonia, to three pints of water is the proper proportion. Rain water is preferable; and the application may be made once a week. Let the earth get dry and then give it a free watering not on the pot, but on the leaves.

The lady who gives the prescription from which she has fully tried, says, "I have received much benefit." By turning a flower pot upside down and immercing the leaves in tepid water.

Miscellaneous.

MRS. WOODRUFF,

Having decided to go out of the business, offers her entire stock of

HATS, CAPS AND BONNETS

FEATHERS, FLOUNCES, AND RIBBONS,

AT COST, (FOR THE NEXT THIRTY DAYS).

PLANING, RESAWING, &c.

BILL LUMBER SAWED TO ORDER.

SEASONED WHITE PINE AND PITCH PIN BOARDS, FLOORING, SIDING,

And a variety of Hemlock Boards for sale.

We have now in operation a new, heavy, six-rol Planer, and other machinery, combining all the recent improvements, and of the most superb workmanship. Running by a never-failing water-power, we are able to do work as soon as it is presented—do it cheaply, and bestow all the care necessary for doing it perfectly. Roll in the work and orders: we will satisfy every man as to prices and workmanship.

H B. INGHAM.

Camptown, April 7, 1873.—1y

HOW IS THIS FOR LOW!

We offer DRESSED LUMBER at the following rates:

Hemlock Flooring, (choice)	$18 per M.
White Pine " "	26 "
Pitch " "	22 "
Siding " "	$15 to 25 "

Pickets from $2 to $4 per hundred.

PLANING, MATCHING, RE-SAWING, &c.,

Done at a moment's notice and by the best machinery now made. We have on hand

ONE HUNDRED THOUSAND FEET DRY LUMBER

We have in the Mill Pond

THREE HUNDRED AND FIFTY THOUSAND FEET OF LUMBER

And are constantly Manufacturing.

☞ Parties who can reach us are foolish to go near the railroad for Lumber, as under any circumstances we can SELL IT CHEAPER—at least the cost of transportation from here to the railroads—say $2 to $3 per thousand.

H. B. INGHAM,
June 26, '73. Camptown.

SUSQUEHANNA COLLEGIATE INSTITUTE

The Spring term of this institution will commence MONDAY, APRIL 6, 1874.

No pains will be spared to maintain the high standing of the institution, and by carefully looking to the interests of each individual student to make its work even more efficient. Each teacher will have his specialty, and use every facility to make the topics interesting, and to secure the largest possible results in his department.

Classes will be organized in several new studies in Science and Language. Also the classes in English will be remodeled so as to meet the wants of new students desiring to pursue these branches.

To save expense, text books, the same as in the county will be used in the English branches, with the exception of Geography.

To make the sojourn of non-resident students more pleasant, the Principal will use his house—situated but a few rods from the Institute building—for boarding purposes, where rooms furnished throughout and provided with clothes closets and other conveniences will be furnished for the young ladies.

The best rooms in the Institute will be furnished and assigned to the young men; all will board at the house of the Principal. There will be a careful supervision on the part of the Principal and teachers of the manner in which students employ their time.

Price for furnished room and board, including fuel, lights, and washing not to exceed six pieces, $4 00 per week. Students will furnish their own toilet and be held accountable for the furniture in their rooms.

Those desiring to prepare themselves for the work of teaching during the following Summer, should apply to the Principal at once.

Tuition from Four to Ten Dollars per term, according to studies pursued.

For further particulars or circulars, address the Principal, E. E. QUINLAN, Towanda Pa.

Towanda, Feb. 10, 1874.

APPLETONS' AMERICAN CYCLOPÆDIA.

NEW REVISED EDITION.

Entirely rewritten by the ablest writers on every subject. Printed from new type, and illustrated with Several Thousand engravings and Maps.

The work originally published under the title of THE NEW AMERICAN CYCLOPÆDIA, was completed in 1863, since which time the wide circulation which it has attained in all parts of the United States, and the signal developments which have taken place in every branch of science, literature and art, have induced the editors and publishers to submit it to an exact and thorough revision, and to issue a new edition entitled THE AMERICAN CYCLOPÆDIA.

Within the last ten years the progress of discovery in every department of knowledge, has made a new work of reference an imperative want.

The movement of political affairs has kept pace with the discoveries of science, and their fruitful application to the industrial and useful arts and the convenience and refinement of social life. Great wars and consequent revolutions have occurred, involving national changes of peculiar moment. The civil war of our own country, which was at its height when the last volume of the old work appeared, has happily been ended, and a new course of commercial and industrial activity has been commenced.

Large accessions to our geographical knowledge have been made by the indefatigable explorers of Africa.

The great political revolutions of the last decade, with the natural result of the lapse of time; have brought into public view a multitude of new men, whose names are in every one's mouth, and of whose lives every one is curious to know the particulars. Great battles have been fought and important sieges maintained, of which the details are as yet preserved only in the newspapers or in the transient publications of the day, but which ought now to take their place in permanent and authentic history.

In preparing the present edition for the press, it has accordingly been the aim of the editors to bring down the information to the latest possible dates, and to furnish an accurate account of the more recent discoveries in science, of every fresh production in literature, and of the newest inventions in the practical arts, as well as to give a succinct and original record of the progress of political and historical events.

The work has been begun after long and careful preliminary labor, and with the most ample resources for carrying it on to a successful termination.

None of the original stereotype plates have been used, but every page has been printed on new type, forming in fact a new Cyclopædia, with the same plan and compass as its predecessor, but with a far greater pecuniary expenditure, and with such improvements in its composition as have been suggested by longer experience and enlarged knowledge.

The illustrations which are introduced for the first time in the present edition, have been added, not for the sake of pictorial effect, but to give greater lucidity and force to the explanations in the text. They embrace all branches of science and of natural history, and depict the most famous and remarkable features of scenery, architecture and art, as well as the various processes of mechanics and manufactures. Although intended for instruction rather than embellishment, no pains have been spared to insure their artistic excellence; the cost of their execution is enormous, and it is believed they will find a welcome reception as an admirable feature of the Cyclopædia, and worthy of its high character.

This work is sold to Subscribers only, payable on delivery of each volume. It will be completed in sixteen large octavo volumes, each containing about 800 pages, fully illustrated with several thousand Wood Engravings, and with numerous colored Lithographic Maps.

PRICE AND STYLE OF BINDING.

In extra Cloth, per vol.,	$ 5.00
In Library Leather, per vol.,	6.00
In Half Turkey Morocco, per vol.,	7.00
In Half Russia, extra gilt, per vol.,	8.00

SAYRE.—THE NEW TOWN OF SAYRE, PA., is situated on the Susquehanna River, between Waverly, N. Y., and Athens, Pa., 32 miles from the Anthracite, 48 miles from the Sullivan, and 35 miles from the Semi-Bituminous Coal Mines of Pennsylvania. It is the Southern terminus of the Southern Central Railroad, also of the Ithaca & Athens Railroad, and is virtually the Northern terminus of the Lehigh Valley and Pa. & N. Y. Railroads. It is a mile and a quarter from the Erie Railway at Waverly.

SAYRE has already in successful operation a large Car Wheel Foundry, a Furniture Factory, a Flouring Mill, a Woolen Mill, and a Planing Mill. A vigorous growth is anticipated for 1874.

THE TOWN PLOT

Is now ready for examination. Lots for residences and business places for sale on reasonable terms.

Its favorable location makes it a

DESIRABLE POINT FOR MANUFACTURERS,

and especial inducements are offered.

Apply at the First National Bank, of Waverly, or at the Office in Sayre, Pa.

THE MILD POWER CURES!

HUMPHREYS'

HOMEOPATHIC SPECIFICS

Have proved, from the most ample experience, an entire success. Simple, prompt, efficient and reliable. They are the only medicine perfectly adapted to popular use—so simple that mistakes cannot be made in using them; so harmless as to be free from danger; and so efficient as to be always reliable. They have the highest commendation from all, and will always render satisfaction.

NOS.	CURES.	CENTS.
