Agricultural.

To Make an Omelet.—Proportions: About one ounce of butter for four eggs, and a pinch of salt, says Pierre Blot, are what is wanted for an omlet.

Process: Salt the eggs, and beat them well with a fork. Have a brisk fire; put the butter into the pan, and set it over the fire. Shake and move the pan in every way so as to melt the butter as fast as possible, and without allowing any of it to turn brown. When melted, turn the eggs in, and by means of a fork stir so as to heap up the part cooked, allowing the other part, that is liquid, to come in contact with the pan, and so on until the whole is solidified. Then fold it up; that is, one half is turned over the other with a fork, commencing on the side of the pan to which the handle is attached. Then have a warm dish, which you place on your left hand; take hold of the handle of the pan with your right, the fingers underneath, and the thumb on the top; raise the left side of your left hand so as to have the right side of the dish melined, and then turn the pan upside down right over the dish, the side of the pan opposite that of the handle touching the edge of the dish and the right hand moving from right to left, so that the upper side of the omelet when in the pan will be the under side when on the dish, and you have a soft, juicy, and tasty omelet, as the dish on which it is placed.

An omelet can not be made too quickly. Many cooks fail in making omelets because, by their process, it is made too slowly, and it is either dry or burned and tasteless.

By carefully following the above directions, and after one or two experiments, any one or two experiments, any one with an ordinary amount of natural capacity can make an omelet properly. Some have the habit of adding water or milk to the eggs, but it is not necessary to make the omelet soft; for, when properly made, an omelet is always soft enough without any liquid being mixed with the eggs.

How to Have Good Cider.—Prof. Horsford, of Harvard University, has published a receipt for improving and preserving cider, by means of which the progress of the vinous and acetic fermentations may be arrested at pleasure, and the cider preserved in just such a state as may be desired. It is this:

"Put the new cider into clear casks or barrels, and allow it to ferment from one to three weeks, according as the weather is cool or warm. When it has attained to lively fermentation add to each gallon three-fourths of a pound of white sugar, and let the whole ferment again until it possesses nearly the brisk pleasant taste which it is desirable should be permanent. Pour out a quart of the cider and mix it with one quarter of an ounce of sulphite of lime for every gallon the cask contains. Stir it until it is intimately mixed, and pour the emusion into the liquid. Agitate the contents of the cask thoroughly for a few moments; then let it rest that the cider may settle. Fermentation will be arrested at once, and will not be resumed. It may be bottled in the course of a few weeks, or it may be allowed to remain in the cask and drawn off in draught. If bottled, it will become a sparkling cider of surpassing excellence."

Professor Horsford was the first to use the sulphate of lime for this purpose, and to him is due the credit of first calling attention to its usefulness. It is in no respect deleterious, the sulphate, into which the sulphite is changed by the liberation of sulphurous acid, is entirely insoluble, and remains at the bottom of the vessel. Remember, it is the sulphite of lime, not sulphate, must be used.

The quantity of the cider will remain unchanged for years.

Notes for the Farmer.

There must be an interchange of the pollen of flowers to make them productive, and we must depend on insects for this service.

A good orchard involves in its planting and care all the knowledge, vigilance, tact, effort oversight and labor necessary to make a man successful as a farmer.

The beauty of California woods, especially of laurel and redwood, and their susceptibility to a high degree of finish, makes them particularly valuable for purposes of ornamental work, and may rapidly attract the attention of manufacturers in this country and Europe.

A barrel smeared with tar or other viscous substance having a lighted lamp inside properly protected and placed the orchard or garden during the season of moths and millers, will trap and hold large quantities of these pests. We have thus caught large quantities in this way, particularly the moths of the family of *Bombycidæ*, from the eggs of which cut worms are produced.

Colored Wash for Fences.—The following, says the Massachusetts *Ploughman*, is a most excellent, cheap and durable wash for wooden fences and building. It owes its durability to the *white vitriol* which hardens and fixes the wash:

Take a barrel and slack one bushel of freshly burned lime in it, by covering the lime in it, with boiling water. After it is slacked, add cold water enough to bring it to the consistency of good whitewash. Then dissolve in water, and add one pound of white vitriol (sulphate of zinc), and one quart of fine salt.

To give this wash a *cream* color, add one-half a pound of yellow ochre, (in powder). To give it a *fawn* look, add a pound of yellow ochre, and one-fourth of a pound of Indian red.

To make this wash a handsome gray stone color, add one-half a pound of French blue, and one-fourth pound of India red; a drab will be made by adding one-half of a pound of burnt sienna, and one-fourth pound of Venetian red.

For brick or stone, instead of one bushel of lime, use half a bushel of lime, and half a bushel of hydraulic cement.

Tomato Sauce in the Italian Manner.—Slice five or six onions and a dozen of tomatoes into a stewpan with a sponge of thyme, two bay leaves, six pods of pimento, two tea spoonfuls of curry-powder, salt and a pint of rich gravy, simmer very gently until the whole will pump through a colander; stir, well, that the sauce may not burn.

A copy found in a pocket-book, and receipted to its owner, will be taken by the boy bringing it to the office instant, and then handing it delicately back, audibly signed, as he said, "I can't charge it."

In connection with the above, and meals at all hours of the day.

D. W. SCOTT & CO.
Towanda, Feb. 10, 1874.

APPLETONS' AMERICAN CYCLOPEDIA.
NEW REVISED EDITION.

Entirely rewritten by the ablest writers on every subject. Printed from new type, and illustrated with Several Thousand engravings and Maps.

The work originally published under the title of The New American Cyclopedia, was completed in 1863, since which time the wide circulation which it has attained in all parts of the United States, and the signal developments which have taken place in every branch of science, literature and art, have induced the editors and publishers to submit it to an exact and thorough revision, and to issue a new edition entitled The American Cyclopedia.

Within the last ten years the progress of discovery in every department of knowledge, has made a new work of reference an imperative want.

The movement of political affairs has kept pace with the discoveries of science, and their fruitful application to the industrial and useful arts and the convenience and refinement of social life. Great wars and consequent revolutions have occurred, involving national changes of peculiar moment. The civil war of our own country, which was at its height when the last volume of the old work appeared, has happily been ended, and a new course of commercial and industrial activity has been commenced.

Large accessions to our geographical knowledge have been made by the indefatigable explorers of Africa.

The great political revolutions of the last decade, with the natural result of the lapse, of time, have brought into public view a multitude of new men, whose names are in every one's mouth, and of whose lives every one is curious to know the particulars. Great battles have been fought and important sieges maintained, of which the details are as yet preserved only in the newspapers or in the transient publications of the day, but which ought now to take their place in permanent and authentic history.

In preparing the present edition for the press, it has accordingly been the aim of the editors to bring down the information to the latest possible dates, and to furnish an accurate account of the most recent discoveries in science, of every fresh production in literature, and of the newest inventions in the practical arts, as well as to give a succinct and original record of the progress of political and historical events.

The work has been begun after long and careful preliminary labor, and with the most ample resources for carrying it on to a successful termination.

None of the original stereotype plates have been used, but every page has been printed on new type, forming in fact a new Cyclopædia, with the same plan and compass as its predecessor, but with a far greater pecuniary expenditure, and with such improvements in its composition as have been suggested by longer experience and enlarged knowledge.

The illustrations which are introduced for the first time in the present edition, have been added, not for the sake of pictorial effect, but to give greater lucidity and force to the explanations in the text. They embrace all branches of science and of natural history, and depict the most famous and remarkable features of scenery, architecture and art, as well as the various processes of mechanics and manufactures. Although intended for instruction rather than embellishment, no pains have been spared to insure their artistic excellence; the cost of their execution is enormous, and it is believed they will find a welcome reception as an admirable feature of the Cyclopædia, and worthy of its high character.

This work is sold to Subscribers only, payable on delivery of each volume. It will be completed in sixteen large octavo volumes, each containing about 800 pages, fully illustrated with several thousand Wood Engravings, and with numerous colored Lithographic Maps.

PRICE AND STYLE OF BINDING.

In extra Cloth, per vol.	$ 5.00
In Library Leather, per vol.	6.00
In Half Turkey Morocco, per vol.	7.00
In Half Russia, extra gilt, per vol.	8.00

THE NEW IMPROVED

REMINGTON SEWING MACHINE

AWARDED THE "MEDAL FOR PROGRESS,"

AT VIENNA, 1873

THE Highest Order of "Medal" Awarded at the Exposition.

NO SEWING MACHINE RECEIVED A HIGHER PRIZE.

A FEW GOOD REASONS:

1.—A New Invention thoroughly Tested and secured by Letters Patent.

2.—Make as perfect lock stitch, alike on both sides, on all kinds of goods.

3.—Runs Light, Smooth, Noiseless and Rapid—best combination of qualities.

4.—Durable—runs for years without repairs.

5.—Will do all varieties of work and Fancy Stitching in a superior manner.

6.—Is Most easily Managed by the operator. Length of stitch may be altered while running, and the machine can be threaded without passing thread through holes.

7.—Design simple, ingenious, elegant, forming the stitch without the use of cog wheel gears, rotary cams or lever arms. Has the Automatic Drop Feed, which insures uniform length of stitch at any speed. Has our new Thread Controller, which allows easy movement of needle-bar, and prevents injury to thread.

8.—Construction most careful and finished. It is manufactured by the most skillful and experienced mechanics, at the celebrated REMINGTON ARMORY, ILION, N. Y. PHILADELPHIA OFFICE, 810 CHESTNUT ST. [July 11]

SAYRE.—THE NEW TOWN OF SAYRE, PA., is situated on the Susquehanna River, between Waverly, N. Y., and Athens, Pa., 93 miles from the Anthracite, 43 miles from the Sullivan, and 35 miles from the Semi-Bituminous Coal Mines of Pennsylvania. It is the Southern terminus of the Southern Central Railroad, also of the Ithaca & Athens Railroad, and is virtually the Northern terminus of the Lehigh Valley and Pa. & N. Y. Railroads. It is a mile and a quarter from the Erie Railway at Waverly.

SAYRE has already in successful operation a large Car Wheel Foundry, a Furniture Factory, a Flouring Mill, a Woolen Mill, and a Fishing Mill. A vigorous growth is anticipated for 1874.

THE TOWN PLOT

Is now ready for examination. Lots for residences and business places for sale on reasonable terms.

Its favorable location makes it a

DESIRABLE POINT FOR MANUFACTURERS,

and especial inducements are offered.

Apply at the First National Bank, of Waverly, or at the Office in Sayre, Pa.

DANIEL F. BEATTY & CO., or

BEATTY & PLATT'S

CELEBRATED GOLDEN TONGUE PARLOR ORGANS.

Are ranked by eminent musicians and distinguished men of honor in this country and in Europe, as the leading parlor organ now in use. We challenge any maker to equal them! For Church, Sabbath Schools, Lodges, as well as the parlor, they have no equal. Testimonials and cards of honor are constantly being received in their favor. An offer. Where we have no agents we will allow any one wishing to purchase one of our organs, the agent's discount. Also to any responsible party wishing to purchase one of our organs from a distance, and prefer to see and examine it before paying for it, the same will be granted them by sending us a recommendation from the cashier of your nearest bank, or some prominent man in your vicinity, and if the organ is not just as represented, you have the liberty to return the same at our expense, we paying the freight both ways. It is with pleasure we introduce the Golden Tongue, knowing that it will give universal satisfaction, as it possess many advantages over all others. The tone excels in fullness, and the deep vibration of sounds an evidence that it stands first as to merits of all musical instruments now in use.

We select a few abstracts from letters and editorials which we are constantly receiving in favor of our organs, and wish you to read them:

We cry "Eureka," for we found what we wanted. J. F. WILBAR, Harrisburg, Pa.

I am pleased with the sweetness of its tone. PROF. N. P. VAN LURANEE, Moline, Ill.

Pure as gold.—Daily Patriot.

Our musical critics call to see it. They are delighted with it. GEO. L. FREET, Altoona, Pa.

We would recommend this excellent instrument to the musical world, for its fineness of tone.—Petersburg (Indiana) Democrat.

Combines sweetness and strength in its tone.—Lewistown Gazette.

For quality, promptness and exquisite of tone they are unequalled. PROF. ROBT. HENCE.

I can with pleasure recommend it to any in want of a first-class parlor organ. PROF. O. HUNGER, Mahoby City

I am well pleased with them. J. B. SECHRIST, Hagerstown, Md.

I am pleased with the tone of the instrument. WM. ROBERTS, Brooklyn, L. I.

First among its advantages is the great scope of its expression, being constructed to play the softest music, and, when desired, to increase its power, can either gradually or suddenly produce more volume of tone than any other organ of its class. This is accomplished by our new Patent Double Forte Swell, so arranged that the sound is thrown out by a direct passage through the case.

We desire that every family throughout this country, as well as Europe, may test its wonderful musical producing qualities. Orders have been received at such rapid rates that we have been compelled to enlarge the manufactory, and put on a still larger force of skillful mechanics in order to supply the demands. We, however, now are happy to announce that we can fill orders promptly and with the utmost dispatch. We also call the attention to our world-renowned

EUREKA PIANO.

This Piano is fast gaining a reputation as the leading piano-forte now in use.

Send for illustrated price list and a list of testimonials, some of whom you may know using our organs from the past six months to seventeen years. Address, DANIEL F. BEATTY & CO., Washington, Warren Co., New Jersey.

Aug. 6tf.
