RUST PROOF IRON
FOR ROOFING, WINDOW SHUTTERS, &c.
THE subscribers beg to call the attention of all those interested in roofing, to their GALVANIZED TIN PLATES, and to the many advantages which they possess over all metalic and other substances hitherto used for this purpose, possessing as they do, the strength and lightness of iron without its liability to rust, having now been tested several years, both in this country and in Europe. They are also less subject to expansion and contraction from sudden changes of the atmosphere than common Tin Plate, Iron, Zinc, &c., or any other metal now used for roofing, and consequently form a much better and tighter roof, requiring far less frequent repair, whilst the first cost is but a trifle more.
The subscribers would also call the attention of all dealers and workers in metals, to the many other purposes to which Iron thus protected, can be applied.—In general terms it is applicable to all articles of iron which it is desirable to protect from the action of the atmosphere. And they would especially call the attention of those interested in TELEGRAPHIC LINES, to their Galvanized Wire, which is now almost entirely used in Europe, and which answers every purpose as a conductor of electricity, costing only, about one half as much as copper, and possessing equal durability with that metal.
Having lately erected works in this city for the purpose of galvanizing nails, spikes, bolts, wire, &c., they will be able to furnish any article which may be desired. A supply of Plates (manufactured in Europe,) constantly on hand, from 16 to 32 wire guage.
