DAILY MORNING POST.
MONDAY MORNING ..... APRIL 17.

☞ Mr. Cheshire, in his *Results of the Census*, thus illustrates the vast size of the metropolis of England:—"London extends over an area of 78,029 acres, and the number of its inhabitants, rapidly increasing, was 2,362,236 on the day of the last census. A conception of this vast mass of people may be formed by the fact, that if the metropolis was surrounded by a wall, having a north gate, a south gate, an east gate, and a west gate, and each of the four gates was of sufficient width to allow a column of persons to pass out freely four abbreast, and a peremptory necessity required the immediate evacuation of the city, it could not be accomplished under four-and-twenty hours, by the expiration of which time the head of each of the four columns would have advanced a useless distance than seventy-five miles from their respective gates, all the people being in close file, four deep."

☞ It is stated by a Paris letter-writer that porous stones, by being dipped in coal tar for a few hours, acquire a great degree of hardness, and are thereby rendered much more useful for laying foundations, and for the construction of vaults.

☞ Geologists assert that five entire groups of animals and plants have come into existence, lived their time, and have totally disappeared from the earth. Man is the last of the sixth class, and it would be interesting to know what would be coming next after we are gone.

☞ Lieut. Gillis, who went to Chili on an astronomical expedition—for the purpose of observing the parallax of Venus—said there three years, and made more than 40,000 observations on the planets.

DE QUINON'S
Improved Non-Explosive Camphene Lamps.
HAVING PURCHASED THE right for the above LAMP in the City of PITTSBURGH, WASHINGTON, FAYETTE and GREENE, we are now prepared to furnish Lamps or sell Rights for a reasonable price. These Lamps are constructed so as to render explosion impossible, and the public may rest satisfied that they are safer than any other Burner that has been introduced, and the materials used being cheaper than the "Long Tailed" or oils of any kind, they must come into general use. We have LANTERNS and CANDLES on the same principle.
RECOMMENDATIONS:
This certifies that we have been acquainted with Dr. Quinon's Improved Non-Exploding Camphene Lamp, patented January 6th, 1852, and are fully satisfied that it is very valuable invention, and will be found of great profit to any other Lamp in use. We believe for safety it is perfectly reliable, and therefore deem it worthy the attention of all such as have occasion to use Lamps of any kind.
