EDUCATIONAL.

St. Francis Academy for Boys,
UNDER THE CARE OF THE FRANCISCAN BROTHERS
Loretto, Cambria County, Pa.

THIS INSTITUTION, NATURALLY situated for Educational purposes, affords all the inducements that can be desired for a Catholic Institution. It is located in the most healthy and picturesque portion of the Allegheries, distant four miles from Cresson Station, the direct railroad between Philadelphia and Pittsburgh. The scholastic year commencing the first Monday in September, with close the 15th of July following.
The Terms for Board, including a thorough English Scholastic Course, are $150 per annum.
The Classic and Modern Languages form an extra charge of $10 per annum.
Washing and use of Bedding $10.
For further particulars apply to the superior of the Academy.
References can be made to the Rt. Rev. Dr. O'Connor. ap30dly*dw

Vincent's College and Seminary,
UNDER THE CARE OF THE BENEDICTINE FATHERS,
Near Latrobe, Westmoreland county, Pa.

IN THE COLLEGE ARE TAUGHT THE usual branches of English Education.
In the SEMINARY, the Classics, Mathematics, History, Rhetoric, Philosophy, etc., and the different branches of higher erudition necessary or useful to those aspiring to Priesthood.
The terms for Board and Tuition are $80 per year, to be paid semi-annually, strictly in advance.
German and French and other languages, Drawing, Painting and Music, form no extra charge, excepting some recompensation for the use of instruments.
Medicine, Washing, Books, Stationery, etc., form extra charges.
For prospectuses apply to the Director of the College.
The Collegiate year begins on the 1st of September, and ends on the 22 of July following.
FATHER G. D. UMM,
Director of the College. jy18

BY AUTHORITY.

Steam Machinery for Screw Propeller Sloops-of-War at the U. S. Navy Yards of Portsmouth, N. H., Boston, New York, Philadelphia, Gosport, and Pensacola.

NAVY DEPARTMENT, July 26, 1858.
SEALED PROPOSALS, endorsed "*Proposals for Steam Machinery for Screw Propeller Sloops of War*," will be received at this department until 3 o'clock P. M., of the 6th of September next, for the complete construction of the 8 sets machinery and appendages, and placing the same on board, for each of the screw sloops-of-war building at the U. S. navy yards at Portsmouth, N. H., New York, Philadelphia, and Gosport in accordance with the following conditions:
The offer must be for a specific sum for putting the whole in the entire operation, that includes all patent fees, and the department will require a release from the proprietors of any patented article or arrangements used in or about the machinery, and must state the time in which the work will be completed; which time will not be accompanied by the usual guarantee required by law.
The name of the establishment in which the work is to be executed must be stated. The details of the design and arrangement of the machinery will be left with the party whose proposition may be accepted as combining the greatest number of advantages, keeping in view cost, simplicity, economy of fuel, facility of access for adjustment when in working parts; it being the object of the department to procure machinery which can develop great power when required, as well as be of the most economical speed for ordinary cruising, while at the same time they will be able to propel the vessel at a moderate speed with great economy of fuel, so that long voyages may be performed with one supply of coal.
With this view, the department will expect the builders to guarantee that it will be prepared to be accepted by a competent board of engineers for adjustment when in working order, and to specify those results under the following heads:
1st. The amount of horse power which the engines can develop for five days consecutively when driven up to their highest capacity, to be measured on board the vessel by the indicator, at the rate of 35,000 pounds lifted one foot high in a minute for each horse power; 2d. The horse power, at least 80 revolutions per minute.
The consumption of coals per horse power per hour must be stated. The pressure in pounds per square inch of the steam on the piston of the engines at the above velocity, the screw being disconnected and the engines without a load, except the one of shafting, must not exceed 2½ pounds per square inch of piston by indicator diagram.
The quantity of coal which can be stowed in the ship without exceeding the total weight of 400 tons for machinery, appendages, boilers water in them, bunkers, bolts, spare pieces, and coal within the length occupied by the engines and boilers. The boilers to be of iron of the multitubular kind, with brass tubes and with telescopic smoke pipe stay, as it is intended to use fresh water in the boilers. A surface condenser of the most approved kind will be required.
The propeller with the connections for hoisting it will be of composition, to be properly proportioned for at least 80 revolutions per minute and for the immersed amidship section of the vessel.
The pumps, apparatus for ventilating, and appurtenances of all kinds necessary for the perfect working of the whole to be of the most approved kinds.
The coal bunkers, shaft passage, to a watertight iron bulkhead, a distilling apparatus for fresh water, from which can be made not less than 500 gallons per day, and the tools and duplicate pieces necessary and satisfactory for an efficient cruising steam sloop-of-war, must be included in the proposition, and a list of them will be furnished.
The wood and carpenter work, except the boring out the deadwood for the shaft necessary to adapt the vessel for the reception of the machinery, boilers and appendages will be provided at the expense of the Navy Department, and it will permit the use of such facilities as it may have for hoisting the heavy machinery on board.
For the accommodation of the entire steam machinery and fuel there will be allowed in the body of the ship, the entire space under the spar deck commencing at the foremost shaft the main mast, and thence extending forward a distance of 60 feet.
Within this space it is expected to carry coal for five days' steaming at the maximum speed.
In the specifications the daily consumption of fuel will be stated; also the weight of the machinery, coal, boilers, water in them, shaft, propeller and appendages, with tools and spare work, all of which must not exceed 400 tons of 2,240 pounds.
The distance from the after side of the mainmast to the after side of the forward stern post will be about 80 feet, and the distance between the forward and the after stern posts will be seven feet. The depth from the load water line to the top of the keel under the propeller will be 12 feet 1 inch.
The proposal must be accompanied by full specifications and general drawings, having the position of the centre of gravity of the machinery, boilers, etc., marked on them, giving also the capacity of the steam cylinders, pressure of steam, area of foot and delivery valves, and of air pump and outboard delivery valves, space for steam above the water line on the boilers, the fire and grate furnace, also the diameter, pitch, surface, and kind of propeller and other principal points, that comparisons can readily be made.
The terms of payment will be that, when one-half of the materials and labor provided for in the contract shall have been completed to the satisfaction of the department, there will be made a payment of ½ part of the whole amount of the contract. When the whole shall have been completed and ready for erection in the ship a further payment of ⅓ will be made; and when a satisfactory trial of seven consecutive days shall have been made, then a further payment of ⅙; and when the ship shall have performed satisfactorily at sea for a period of three months, the remaining sum shall be paid. The repairs necessary during this period from defective workmanship or materials will be at the expense of the contractor.
It is to be understood that if the weight and other conditions specified in the contract be not complied with, the department is to be at liberty to reject the whole machinery, the contractor to be at the expense of taking it out of the ship and refund whatever amount of the contract price may have been paid.
PROPOSALS will also be received at the same time and place for the steam machinery and appendages, and placing the same on board each of the screw sloops-of-war building at the navy yards at Boston, Philadelphia, and Pensacola under the specifications and conditions above stated, with variations in the following particulars, viz:
1st. Horse power 750 nt. at least, 80 revolutions per minute.
2d. The total weight for machinery, appendages, boilers and water in them, bunkers, tools, spare pieces, and coal must not exceed 350 tons of 2,240 pounds each. The length occupied by the engines and boilers will commence 14 feet abaft the mainmast, and thence extend forward a distance of 40 feet.
The distance from the after-side of the mainmast to the after-side of the forward stern post will be about 75 feet. The depth from the load water line to the top of the keel under the propeller will be 9 feet 2 inches.
Steam engine manufacturers who desire to bid, can obtain a copy of the section of any one of the vessels upon making application to the department.
ISAAC TOUCEY,
jy31dtaS Secretary of the Navy.
