AN UNPARALLED PROGRAM OF ENTERTAINMENT—Hippodrome, Vaudeville, Circus—in front of Grand Stand afternon and Evening.

HORSE SHOW— DOG SHOW—PENNSYLVANIA'S LARGEST FIRST AID MEET.

DANCING EVERY NIGHT CHORUS OF 50 VOICES.

S. S. LEVIATHAN ORCHESTRA. IZZY CERVONNE'S BAND.

WONDERLAND—Marvelous display of Mechanical Toys in Operation.

THE GREATEST SHOW ON EARTH FOR 50 CENTS.

About Your Health

Things You Should Know

by John Joseph Gaines, M. D.

Hot Weather Hints

Assuming that there will be some hot weather this summer, it behooves the "fats" as well as the "leans" to get all the comfort out of it that is possible. Perspiration, a most valuable process, should not be arrested, but its discomforts should be dealt with intelligently, if it is to be made bearable.

Light, airy clothing is indispensable; it permits free access of air to the person, which is effectual in carrying away excess moisture. Some people have sweat glands that are excessively active, especially the fat bodies with nervous temperaments—these may attempt to hunt skin-drainage, by maintaining more free action of bowels and kidneys. It is not always advisable to cut down water-drinking in hot weather, unless it be the intake of ice-water, which for many reasons is bad and for the human system. Neither should plenty of exercise be neglected, exercise and sweat are good, but water are needed for the best conservation of health.

If some perspiration has a very offensive odor, good ventilation by means and dietary of economizing between our dietary of animal and vegetable foods.

Locally, bathing, especially the cool shower is tonic; the coarser dry towel is a faithful ally. Many powders are used for dusting rectum surfaces; know the quality of the stuff you buy. If the skin presents a "greasy" surface, the starate of zinc is excellent—may be used freely without danger of poisoning in any way. The only precaution to be observed, never let baby so that he inhales the powder—and the applies to any dusting powder on the market. The starate of zinc is a good face powder after shaving, especially if the skin is oily. Perspiration, Thymol powders are very useful as irritable skins, and entirely harmless. No dusting compound should contain lead.

GUIDING LAKE SHIPS BY RADIO COMPASS

Steamers Greater Detroit and Greater Buffalo of the Detroit and Cleveland Navigation Company, Detroit Mich., operating "Steamer Line" between Buffalo, Cleveland Chicago and Detroit, have the distinction of being the first passenger steamers on the Great Lakes to be equipped with radio compass.

For radio compass has been employed on the Great Lakes only a comparatively short time, and up to the present 145 vessels, all of them lake freighters, have been equipped with this unfailing direction finder," said A. A. Schantz, president of the company.

Radio experts say that this compass is the only invention up to the present in radio that has worked out a hundred per cent. This instrument enables the captain of a vessel racing along at full speed in the thickest fog and on the stormiest night to know precisely and continuously just where he is. It supplies the greatest lack of navigation, the ability to discover the exact location of a ship when the light houses and other navigation marks are blotted out by fog and mist.

"The action of the radio compass is based on the working of the loop aerial familiar to all radio fans who know that when the edge of the loop is pointed directly at the distant sending station the signals are heard the loudest, and that when the loop is turned the signals diminish in volume until when the loop is at right angle with the station the signals disappear altogether. On the boat the loop is placed over the pilot house mounted on a shaft that runs down into the pilot house directly over the compass dial. On the lower end of the shaft two sight wires are stretched directly over the dial. The operator grasping a wheel connected with the shaft turns the shaft carrying the loop until he hears a signal. Then he turns it back until the signal disappears. The sight wires stretched above the compass card are then pointing directly at the sending station. There is no guess work about it. If the fog was so thick that the captain could not see the end of his nose he could steer his boat to that light house as straight as the flight of an arrow.

"Out in the lake surrounded by fog or mist the one thing that the captain wants to know is the exact position of his ship; how far he is from shore and from certain shoals that he worries about. Today the captain dons the head set over his ears and turns the loop. Soon he picks up a signal dash, an interval, and then a dash again. That is a signal for the Detroit River light and a glance at the sight wires show him the exact location of the light house. For all practical purposes he can see that light house just as well as though no fog was present. If it is necessary for the captain to know his exact position, he turns the loop until he picks up another station to give him a cross bearing and with that information he can make a dot on the chart at the exact spot where his ship is riding.

"The government has established two radio sending stations in Lake Erie; one at the Detroit River light and one at Buffalo. Other stations have been placed in operation at different locations along the chain of lakes. And in addition to this all of the important broadcasting stations on the lakes have been accurately located for the benefit of the users of the radio compass so it is now possible for a captain groping in a fog in Lake Erie to listen to a little jazz music from WCX and learn how close his ship is to the south east shoals. The signals from the government ra-
