To put it in round numbers for ten acres, it will cost \$350 per acre. In addition to all this, a house is needed, with beds, a stove, cooking and table ware, for a family of twenty-five to for use only from fifteen to forty, twenty days, in picking time. I believe these are about what will be needed, and the prices on an average nearly correct. I have said nothing about the use of the land for the first year, or the cultivating, as the corn crop will pay this; nor have I said anything of such tools and implements as are needed in usual farming, for these are on hand, if no hops are raised. A two-horse culti-vator will be desirable, on the score of economy. The labor, cost of harvesting, use of land, fifteen per cent. on cost of poles to make them good when worn out, ten per cent on other capital, etc., for each year, with good fair crops, will be about fifteen cents per pound.

Davis, of W. Va., introduced a bill to reduce the tax on the circulation of State banks to an amount equal to that paid by national banks. He said the tax on national bank circulation was one per cent., and that on State bank cir-culation ten per cent., which practically pre-vented any circulation of the latter class. He saw no reason why national banks should have an advantage over State banks ten to one.
