

MAIN EXHIBITION BUILDING.

The Space Occupied by the Different Nations and the Centennial in which they are—A Hasty Glance through the Building.

Size of building, 1,880 feet in length and 464 feet in width; height, seventy feet; floor space, 21.47 acres. The United States occupies an area of 189,231.3 square feet, or nearly one-third of the floor space in the building.

Great Britain and Ireland have an area of 51,776.3 square feet. This section is one of the four occupying the posts of honor in the building, the others being the United States, Germany and France. Very nearly ready. Display excellent.

France and colonies have an area of 3,314.5 square feet. So nearly ready that two days after the opening suffices to have everything in excellent shape. Germany has an area of 27,705.5 square feet. The display was in a partial condition quite as far advanced as any in the building.

Austria and Hungary have an area of 24,070.3 square feet. Austria but partially incloses her space, and that with a triple arch filled with Tyrolean stained glass.

Canada has an area of 24,070.3 square feet. In this section prominence is given to an educational display, mineralogical specimens, petroleum, hides, and furs.

Sweden has an area of 17,755.3 square feet. A grand wooden archway leading into this section is perhaps the most elaborately finished piece of common carpenter work on the grounds.

Japan has an area of 17,080.8 square feet. This section is not inclosed by a pavilion, but is filled with large structures of white pine, rounded, grooved and stained in imitation of bamboo.

Denmark has an area of 8,238.8 square feet, a rectangular inclosure being formed by means of a series of glass showcases, with a beautiful pagoda at one end of the rectangle.

Tunis and Sandwich islands have an area of 3,589.5 square feet. Tunisian area, 2,015 square feet; exhibits not completely arranged.

Belgium has an area of 15,358.8 square feet. The Belgian pavilion will not be completed before June.

Spain has an area of 13,253 square feet. Spain's pavilion is of the Renaissance style, the nearest structure in the building.

Russia has an area of 11,022.3 square feet, too much to remain unoccupied at the opening ceremonies. It contains nothing but a few dozen unopened cases.

Norway has an area of 6,897 square feet. The pavilion is as much in keeping with the romantic country and hardy people which it represents as an eggshell is with its contents.

Switzerland occupies an area of 6,646.3 square feet. Clocks and watches, watches and clocks, cloaks of silver and brass, wotches of gold and silver; philosophical sections and of the whole of the renowned country; anatomical charts, and entomological, zoological, mineralogical, agricultural and botanical specimens; carved cabinetware, relieved by gilt

mountings and floral paintings; courtly costumes, heavy with embroidery of gold and silver; great seamless expanses of the most valuable lace; jewelry and regalia, and fine straw and delicately tinted silks are the main features of the display.

Mexico has an area of 6,504.8 square feet. The pavilion is built of wood and plaster, and is of the Gothic style, being a representation of the leading architecture of the city of Mexico at the time of the conquest of the country by Cortez.

Egypt has an area of 5,022 square feet. In a pavilion which is a perfect model of an Egyptian temple of the ninth or tenth century, Egypt presents, in perfect order, a display of plaster casts of monuments, obelisks, busts and statues; Arabic ornamental plaster work; a collection of household utensils, and implements and weapons of war used by the native of interior Soudan; cabinetware of modern make, exquisitely carved in the ancient Arabic style and inlaid with ivory, ebony and mother-of-pearl.

China occupies an area of 5,642 square feet. The pavilion, which was constructed in Canton in sections, is a gaily affair. The cases are arranged in circles, and contain pottery, porcelain, bronzes, carved wood work, chasings, inlaid work, silks, etc., both cases and contents being decorated with the curious patterns of the Chinese.

Portugal has an area of 3,569.5 square feet. The exhibits comprise a representation of the flora of the country, a full display of the wines for which Portugal is noted, and a great variety of manufactures, including articles made of Lisbon marble.

Denmark has an area of 2,510 square feet. A plain, neat, fortress-like structure, bearing the Danish coat-of-arms, incloses this section. The display is mainly of terra-cotta ware, with a dark ground, relieved by raised figures of a light color, or with a light ground relieved by dark figures.

Belgium has an area of 8,238.8 square feet, a rectangular inclosure being formed by means of a series of glass showcases, with a beautiful pagoda at one end of the rectangle.

Tunis and Sandwich islands have an area of 3,589.5 square feet. Tunisian area, 2,015 square feet; exhibits not completely arranged.

Belgium has an area of 15,358.8 square feet. The Belgian pavilion will not be completed before June.

Spain has an area of 13,253 square feet. Spain's pavilion is of the Renaissance style, the nearest structure in the building.

A Desperate Encounter.

On one occasion the late Judge Dowling and Jourdan were sent to arrest two noted English burglars. For several days they pined them, but never got near enough to their hiding place to make it wise to seize them.

Finally they received information that their men had hired lodgings in a tenement in Cherry street. It was deemed best to wait until night before attempting the capture, and it was also thought to be unwise to take a large force.

Dowling always, when talking about the arrest, regretted that he had not taken a third officer with him. It was, he thought, his only mistake. They didn't knock at the outer door, fearing to frighten their game. But they had to burst it in, and thus gave the burglars an intimation of danger.

Reaching the door of the room in which they hoped to find the men, Dowling drew his pistol, while Jourdan held a club. Dowling opened the door and entered, and he did so a crack over the head with an iron bar nearly knocked him down.

This warned Jourdan, who jumped in quickly, and, avoiding a blow aimed at him, got in on the open face of one of the scoundrels, while Dowling, recovering, went vigorously for the other. There then ensued a hand to hand fight, the equal to which has rarely happened. Described in romance it would seem unnatural and impossible.

As acted in a darkened room of a dilapidated Cherry street tenement house it was simply frightful. Dowling was as brave as a lion, but he had a little more of his temper when his blood was up. A dozen times he leveled his pistol at the head of his man. A dozen times Jourdan found time to knock it up.

He wanted the pleasure of carrying the two burglars to the station, and was unwilling to get a triumph by the necessary homicide. Jourdan, however, as an exhibition feller, had thus interfered with Dowling's purpose time and time again, Joe suddenly turned his pistol end for end, and with tremendous force rained his butt end blows on the rascal's head, until covered with blood he fell to the floor unconscious.

Meanwhile Jourdan wrestled the iron bar from his opponent, but the floor came as an exhibition feller, had thus interfered with Dowling's purpose time and time again, Joe suddenly turned his pistol end for end, and with tremendous force rained his butt end blows on the rascal's head, until covered with blood he fell to the floor unconscious.

Each division must pay \$3 quarterly for "the goods," or password and signs, and they are changed quarterly. The order in America always receives these "goods" from the body master, in which they were used in the old country. Some of the signs were explained and shown in court by the witness, creating quite a sensation.

Some of the signs were explained and shown in court by the witness, creating quite a sensation.

THE MOLLY MAGUIRES.

The Story of a Detective who Joined the Order and Learned its Secrets—The Signs and Passwords—How He Was Placed in a Desperate Encounter.

Detective James McParlan, alias McKens, in the court of Pottsville, Pa., told the story of his exposure of the secret organization of Molly Maguires, so far as it related to the prisoners at the bar. McParlan related how he became connected with the Ancient Order of Hibernians, more commonly known in the coal regions as the Molly Maguires, on April 14, 1874.

By his initiation he was ordered to take off his hat and kneel down. An obligation called "the test" was then read to him, the substance of which was that he should obey the officers of the society in all things lawful, but not otherwise if he heard friends or members illy spoken of by him.

He was then read the constitution of the society, which was in English, and he was to keep everything pertaining to the order a secret. He kissed the test and arose, which ended the ceremony.

The password, signs and grips were called "the goods," and were obtained by the members from the body master, or division master, who was the chief officer of a division or lodge. The witness obtained them from the county delegate, who obtained them from the State delegate at Pittsburgh, who, in turn, got them from the president of the national board.

Each division must pay \$3 quarterly for "the goods," or password and signs, and they are changed quarterly. The order in America always receives these "goods" from the body master, in which they were used in the old country. Some of the signs were explained and shown in court by the witness, creating quite a sensation.

Requites in a Good Wife.

One evening lately, says a correspondent, in our family circle, the conversation turned on female character, and the various elements of its composition. The subject narrowed by degrees, till the question came to be, what were the main requisites in a good wife?

There being considerable diversity of opinion, and room for endless argument, it was agreed that each should write on a slip of paper certain qualifications, in the order deemed most important. The number of points was to be limited in each list to seven, and those which were found in greatest number in all the lists were to be regarded as the decision of the company.

When the papers came to be examined, there was great variety in the elements noted, and still greater in the order, as might be expected from the different ages and characters of the voters. By a very decided majority the following points, in the order given, appeared on the seven elements of the best wife: 1—Fidelity. 2—Sense. 3—Temper. 4—Education. 5—Manners. 6—Beauty. 7—Riches.

Why is it, —Ruskin observes that as a rule women have no eye for color. This explains why a woman is obliged to spend three-quarters of a day getting the exact shade of ribbon to trim a dress, while when she comes to mending her husband's pantaloons she seems to think that a yellow patch is just the thing to match black broadcloth.

Clapped hands, face, pimples, ringworm, scurvy, and other cutaneous affections, and rough skin made soft and smooth, by using Dr. J. C. Wood's "Beauty" Cream, New York, as there are many imitations on the market, all of which are worthless.—Com.

His BUSINESS EDUCATION.—It is stated that the late Mr. A. T. Stewart incited his business talent from his mother, who followed him to New York, and carried on the business for many years with marked success, but finally, at the earnest solicitation of her son, gave up the store and went to live with him, continuing to reside in his house until her death.

Xantippe. It seems that the memory of this woman, like that of her notorious husband, is likely to be kept alive to the present day, or have become a very irritable temper, and the name has become a synonym of "vixen," or "scold." It is more than possible, however, that the judgment of mankind has been too severe. A more charitable disposition would undoubtedly have discovered her many good qualities, and have attributed her fallings more to physical infirmities than to moral obliquity.

There are several kinds of worms which trouble horses: the pin-worms (pointed at the end), and the round worms, which are dangerous. Sheridan's Cough Condition Powder will, in a few days, cure the worms, and the horse will be able to thrive.

Factories and machine shops should not be allowed to run a day without Johnson's Anodyne Liniment. In case of a sudden accident an immediate use of it may save weeks of suffering and perhaps a limb, or even life.

Don't Throw Away Your Money.—To the Public.—For over twenty years Dr. FORTAN'S VENEREAL TREATMENT has been known to cure all cases of venereal disease, and not one has been returned. Thousands of dollars have been paid for this medicine, but it has done nothing for the sufferer. It is sold by Dr. Fortan, 101 Park Place, New York. It will cure all cases of venereal disease, and not one has been returned.

H.W. JOHNS' PATENT MATERIALS. Asbestos Roofing—With LEADY GRAY PAINT PROOF COATING for steep or flat Roofs. The only reliable substitute for lead, in use by all the LEADY GRAY PAINT MANUFACTURERS and R. R. Co's. Ready for use. Easily applied. Asbestos Paints, All colors, ready for use, invaluable to richness of color and beauty of finish.

The Markets. NEW YORK. Beef Cattle—Prime to Extra Bullocks 12 1/2 11 1/2. Common to Good Texas 10 1/2 10 1/2. Milch Cows 10 1/2 10 1/2. Sheep—Washed 10 1/2 10 1/2. Dressed 10 1/2 10 1/2. Sheep—Washed 10 1/2 10 1/2. Dressed 10 1/2 10 1/2. Sheep—Washed 10 1/2 10 1/2. Dressed 10 1/2 10 1/2.

CENTENNIAL BOOK OF BIOGRAPHY. THE SUN FOR THE CAMPAIGN. The events of the Presidential campaign will be so minutely and fully illustrated in THE NEW YORKER'S SUN as to command it to command men of a patriotic heart. It will be the most complete and reliable record of the year's history.
