The season thus far has been a little cold for Indian corn, but it could hardly have been better for oats. This grain seems to delight in cold weather, and succeeds better at the north than in southern latitudes. The crop is peculiarly subjected to rust, often blasting just as the grain begins to fill, especially if the weather is extremely hot and showery at that time. In southern New England, where hay sells nearly twice as high as in the more northern portions, oats, as a grain crop, have become more and more unpopular from year to year, till at the present time probably more than half that are sown are intended more for fodder than for the grain. Some farmers let tuem stand till the grain will pay for thrashing, but cut while the straw is yet green. Others cut when in bloom, and thus get the hay when it is in its best condition for feeding. Oats have usually been grown on old ground where corn or potatoes have been cultivated one or more seasons. A few farmers make a practice of manuring oats the same spring they are sown, but usually this crop is compelled to feed upon manure already in the soil, such as has been applied to previous crops and not wholly consumed. In un-

dressing of stable manure. For the past two years we have made special efforts toward raising upon the farm all the fodder to be used by the stock kept, and in order to do this have experimented in various ways. Among other experiments, we have tried growing oats for fodder upon old mowing fields, which were producing too little hay for profit. The land has been plowed in the autumn, after the hay crop was secured. Then it is harrowed fine and smooth, during the leisure between harvesting and other work. Before winter the soil may be made to look almost like an old field, providing the plowing and harrowing is thoroughly done. Manure of some kind is applied before the ground freezes, and if convenient is cultivated lightly into the

Early in spring, as soon as the soil is dry enough to work well, it is cultivated thoroughly and sowed to oats, at the rate of from four to five bushels per acre. If the grain is small, four bushels may be enough, but otherwise five would be better. This will give straw nearly as fine as ordinary stout timothy. It is easily cured, and, when cut early and well cured, makes hay that is better than timothy and red top, which are allowed to stand till dead ripe. We have had nearly five acres of such oats this season, most of which has been grown upon greensward, and the result has been quite equal to our highest anticipations, Iwo fields were manured with Brighton fertilizers, applied in the fall, after the ground froze, and left exposed during the winter, and with no perceptible loss land somewhat subject to washing. More labor is required for growing such crops than for cutting the hay upon old run-out fields, but from our experience we should claim that such labor pays,

It would seem that land producing two or three crops of grain in a season, each being fairly manured and the stubble plowed in, must be gaining in fer-tility. It certainly improves in mechanical condition, being light and exceeding-ly mellow. We doubt if oats, as a fodder crop, are yet appreciated according to their real merits,—New England

## Household Hints.

SCROFULA. -A tea made of ripe, dried whortleberries, and drank in place of water, is a sure and speedy cure for scrofulous difficulties, however bad.

FOR REMOVING PAINT FROM WOOD, -Mix one pound of washing soda and two named Allen and Broadway, have a pounds of unslacked lime, and if the good character for honesty from the The corn crop of gredients well together, and dilute with

green tomatoes, ten white onions, six several of the women expressing a green peppers, one small box of mustard, two quarts of vinegar, one and one-half pints of salt, one-half pound white

Wish to have their children baptized,

Mr. Harriman visited their camp

Friday afternoon and held a service, mustard seed, one-quarter pound whole cloves, one tablespoonful black pepper; who witnessed it. On a little knoll, cut onions and tomatoes in thin slices, and chop peppers thin; make layers of oak tree, was placed a wagon seat, them in a large stone pot, and sprinkle a covered with white and bearing a little salt on each layer. Let them stand twenty-four hours, and then drain off the brine. Put tomatoes, onions and gypsies and a number of visitors, makpeppers in a preserving kettle, sprinkling each layer the mustard-seed, spice, and pepper, and so on to fill the kettle. The box of mustard should be thoroughly mixed in the vinegar, and thrown into the kettle after everything else is in. Stew slowly over a moderate fire for threequarters of an hour.

How to Preserve Ice.—The following method of preserving it is highly recommended, and is certainly worth trying: Cut a piece of flannel about nine inches square, and secure it by ligature round the mouth of an ordinary tumbler, so as to leave a cup-shaped depression of flannel within the tumble to about half its depth. In the flannel cup so constructed pieces of ice may be preserved many hours, all the longer if a piece of flannel from four to five inches square be used as a loose cover to the form. ice cups. Cheap flannel, with comparatively open meshes, is preferable, as the tive, and our greatest happiness arises water easily drains through it and the ice is thus kept quite dry. When good flannel with close texture is employed, a small hole must be made in the bottom of the flannel cup, otherwise it holds the water, and facilitates the melting of the ice. Placed in a cup of this kind, two ounces of ice has been known to last for nine or ten hours.

Mr. Lester, of Providence, R. I., says that when he was a boy ten or twelve years of age, he was one day standing in Market square with his grandfather, when four Irishmen came up, one of whom asked the distance to Pawtucket. He was told by the old gentleman that it was about four miles, "Well, faith," said Pat, in a mock tone of encouragement to his three tired companions, "that's not bad at all—only a mile apiece for us." "Whom do you want to see in Pawtucket?" inquired Mr. to see in Pawtucket?" inquired Mr. by self-sacrificing endurance; and the Lester, senior. "Be jabers," was the crowds that pour forth in the morning quick reply, "I want to see meself there and return at night are daily processions the most of anybody !"

FARM, GARDEN AND HOUSEHOLD. Remarkable Escapes of Eminent Men.

Some years ago a young man, holding subordinate position in the East India Company's service, twice attempted to deprive himself of life by snapping a loaded pistol at his head. Each time the pistol missed fire. A friend entering his room shortly afterward, he requested him to fire it out of the window; it then went off without any difficulty. Satisfied thus that the weapon had been duly primed and loaded, the yourg man

sprang up, exclaiming:
"I must be preserved for something great," and from that moment gave up the idea of snieide, which, for some time previous, had been uppermost in his houghts. That young man afterward ecame Lord Clive,

Two brothers were on one occasion walking together, when a violent storm of thunder and lightning overtook them. One was struck dead on the spot; the other was spared, else would the name of the great reformer, Martin Luther, have been unknown to mankind.

Bacon, the sculptor, when a tender boy of five years old, fell into the pit of soap-boiler, and must have perished, had not a workman, just entering the yard, observed the top of his head. When Oliver Cromwell was an infant,

a monkey snatched him from his cradle, leaped with him from a garret window, and ran along the leads of the house. favorable seasons, when the weather is hot and damp, oats are thought to do best under such treatment; but in a sea-The utmost alarm was excited among the inmates, and various were the devices used to rescue the child from the guardson like the present they do equally well upon newly plowed land, and with a fair ianship of his newly-found protector, All were unavailing; his would-be rescuers had lost courage, and were in despair of ever seeing the baby alive again, when the monkey quietly retraced its steps, and deposited its burden safely on the bed. On a subsequent occasion, the waters had well-nigh quenched his insatiable ambition. He fell into a deep pond, from drowning in which a clergy man named Johnson was the sole instru ment of his rescue.

At the siege of Leicester, a young soldier, about seventeen years of age, was drawn out for sentinel duty One of his comrades was very anxious take his place. No objection was made, and this man went. He was shot dead while on guard. The young man first drawn, afterward became the author of the "Pilgrim's Progress."

Doddridge, when born, was so weakly an infant he was believed to be dead. A nurse, standing by, fancied she saw some signs of vitality. Thus the feeble sperk of life was saved from being extinguished, and an eminent author preserved to the world.

John Wesley, when a child, was only just preserved from fire. Almost the moment after he was rescued, the roof of the house where he had been fell in. Of Philip Henry, a similar instance is recorded.

Many years have now elapsed since three subalterns might have been seen struggling in the water off St. Helena; one of them, peculiarly helpless, was fast succumbing. He was saved to live as Arthur Wellesley, Duke of Well-

The life of John Newton is but the from such exposure, even though upon history of marvelous deliverances. As a youth he had agreed to accompany some friends on board of a man-of-war. He arrived too late; the boat in which triends had gone was capsized and all its occupants drowned. On another occan, when tide-surveyor in the port of Liverpool, some business had detained him, to the great surprise of those who were in the habit of observing his undeviating punctuality. He went out in the boat, as heretofore, to inspect a ship, which blew up before he reached her. Had he left the shore a few moments sooner, he must have perished with the the rest on board.

## Gypsy Burial and Baptism.

Wednes- States wheat crop for 1876 exceeded the GREEN TOMATO PICKLES.—One peck at home in "the old country," and wish to have their children baptized, of the corn produced. retired from the tents and shaded by an a company of about fifty persons. Mr. Harriman baptized seven children, one of them only five days old, and addressed the elders on the practical duties and responsibilities of parents, The gypsies were reverent and attentive, and expressed much gratitude for the interest taken in them and their children. Within the week the gypsy camp has been the scene of birth and

death. Thoughts for Saturday Night. Reason is a very light rider and is

easily shook off. How sad a sight is human happiness those whose thoughts can pierce beyond an hour.

The object of art is to crystalize emotion into thought, and then to fix it in All pleasure is more or less imagina-

from delusion The surest sign of age is loneliness, While one finds company in himself and his pursuits he cannot grow old, whatever

his years may be. The severest punishment of any injury is the consciousness of having done it; and no one but the guilty knows the withering pains of repentance.

There cannot live a more unhappy creature than an ill-natured old ma who is neither capable of receiving pleasures nor sensible of doing them to others.

In youth grief comes with a rush and overflow, but it dries up, too, like the torrent. In the winter of life it remains a miserable pool, resisting all evaporation.

A thousand wheels of labor are turned by dear affections and kept in motion of love and duty.

Nicknaming Professors A correspondent of the New York Evening Post writes from Easton, Ps.,

about the University students there. He says: The facetiousness of the students displays itself in the nicknames which they bestow upon their instructors. Dr. March, who stands at the head of the corps of instructors here, and is one of the ablest Anglo-Saxon and philological scholars on either side of the Atlantic, is yelept "Shanghai." That the worthy doctor is familiar with his own sobridoctor is familiar with his own sobri-quet is evident, for one of his little boys, when asked who he was, answered: "I am little Shanghai." The late Dr. Coffin, whose loss is still keenly felt by the institution, was called "Old Spookie," and his son "Young Spookie," from an awkward habit they had of turning up among the students at unexpected times and places. An encedite is told of the and places. An anecdote is told of the doctor which is characteristic of him, for he was at heart a modest and retiring, even a timid, man. He had missed several chickens from his roosts, and suspected a student who was boarding him-self in his own room. He planned a surprise for the culprit at his meal one day; but the young thief, seeing him coming, hastened with his ill-gotten poultry to his bedside, and was on his knees in the act of concealing it when the doctor broke in upon him. The good doctor beat a hasty retreat, exclaiming at the same time: "I beg a thousand pardons; I did not mean to interrupt you in your devotions!" Dr. Porter, a professor of natural sciences, a friend of Dr. Leidy, of Philadelphia, is familiarly known among the boys as "Bugs." In many cases this affectionate nomenclature formed by taking the first syllable of the name and adding to it an "ie," after the fashion of the young ladies; thus, Professor Bloomberg is known as "Bloomie," and tutor Diefenderfer as "Diefie." Numerous laughable instances have occurred where some freshman, in his innecence and ignorance, has accosted a professor by one of these latter names. It would be doing the students injustice to think that these names are used out of any disrespect. This is one of the ways the boys have of divesting their instructors of the grim terrors which invest them in the class-room. The students, however, do not seem to fail in recognizing the eternal fitness of things, for now that Dr. Coffin is dead, the old jesting name of "Spookie" laid aside, and you will not hear the roughest boy among them making use

The Value of Corn as Food.

The Milwaukee Milling Journal beieves that the economic value of corn as fodder for the human family is underrated, and presents the following reasons

for its theory:
Wheat is the dearest food consumed by mankind, and when the comparative value and cheapness of the different grains is more thoroughly understood, the singular fact will be developed that there is as much caste in food as in the human race that is supported by it. Scarcity and high cost of wheat eventually force nations and individuals to learn that the moral and financial elevation of the masses depends upon the substitution of some food material cheaper than wheat, and bearing nearer proportion to the reduced scale of wages commodations for two thousand cusnow prevalent the world over. When tomers at once. It is owned by a the conventional necessities of life in-crease in cost laborers' wages diminish, whom it was first opened in 1873. No and suffering and discontent ensue. The following comparison will show that corn the patrons are mostly residents of as well as cats is cheaper food than Tokio, though occasionally a rural party wheat: Oats contain 19.91 per cent, may be seen staring at the unaccustom nourishment; corn, 12.30 per cent., and ed sights about them, to the no small wheat, 14.06 per cent. Taking present amusement of their urban neighbors. Boston market quotations, and each The customer is given a numbered pound of nourishment from oats at fifty-eight and one-quarter cents per bushel ticket on entering, by which his ac-count with the house is kept. A few ald says: Six families of gypsies are encamped near Yalesville, Conn. They are under the leadership of two men \$1.07 per bushel each pound of nourish-

The corn crop of the United States ranging in price from five to fifteen neighbors, and appear to be a superior equals the wheat crop of the civilized cents each, the charges depending pendence from the rapidly increasing population of the world. Corn must be-fore many years be consumed as a partial substitute, at least, for wheat, and the better the quality of the grain, and the more perfect the process of preparing it for food, the quicker will come the enlarged demand. This is in part confirmed by the fact that our exports of a very gay appearance, - Tokio (Japan) 1876 were three per cent, for our whole crop, while for the twelve preceding years they averaged only one per cent.

Water in the Moon.

In a review of Nelson's recent work on the aspect of the moon, the Academy mentions some of the reasons for believing that water cannot remain on its surface as a liquid. Day and night on the moon are each a fortnight long. On the night side any water would be frozen solid. When the sun's rays melted this ice in a lunar morning, there would be no liquid produced, but instead an invisible vapor. If we assume that the moon has an atmosphere of a hundreth of the density of our air, the building in a few minutes. He returned boiling point of water on the moon is forty-two and a half degrees Fahrenheit. But if Regnault's estimate be correct, and the moon's atmosphere has only a three-hundreth of the density of our air, the boiling point of water on the moon is below the melting point of ice; and, therefore, no water could make its appearance on the moon's surface. There is a wide field for conjecture, however, as to the changes which might take place in ice and glaciers under such strange conditions. The notion that the lunar surfaces may be more or less capped with ice, seems to be gaining

A Family Struck by Lightning. During a recent thunder storm which occurred in the night, the residence be-longing to Mr. Theodore Studebaker, in Keg Creek Township, Iowa, was struck by lightning, and every member of the family, all of whom had retired to bed, were more or less injured. Mr. Studebaker had his right leg badly burned from his hip to his foot. His wife had the left side of her face completely blis-tered by the subtle fluid. In the same room their little son was sleeping in a trundle bed, and at the time was lying on his back, in which position he re-ceived a very severe shock, the fluid striking him apparently on the chin, and running down the front of his body, passed off from both his feet, scorching the skin like fire as it went. The hired man, who was sleeping in another apartment, was momentarily rendered insensible, and for some time after consciousness was restored was unable to speak a word. Not one of them was fatally injured, and they are all recovering

## ENGLISH KINGS.

How Some of England's Rulers Died. William the Conqueror died from his enormous fat, from drink, and from the violence of his passions,
William Rufus died the death of the

oor stags that he hunted. Henry the First died of gluttony. Henry the Second died of a broker heart, occasioned by the bad conduct of his children.

Richard Cœur de Lion died like the animal from which his heart was named, by an arrow from an archer. John died, nobody knows how, but it is said of chagrin, which, we suppose, is another term for a dose of hellebore. Henry the Third is said to have died a

atural death. Edward the First is likewise said to have died of a "natural sickness," which it would puzzle all of the college of phy-

sicians to denominate. Edward the Second was most barbarously murdered by ruffians employed by

Edward the Third died of dotage, and Richard the Second of starvation, the very reverse of George the Fourth. Henry the Fourth is said to have died of fits, caused by uneasiness," and uneasiness in palaces in those times was a very common complaint.

Henry the Fifth is said to have died of a painful affliction, prematurely.' This is a courtly phrase for getting rid of a king.

Henry the Sixth died in prison, by means known then only to his jailer, and known now only to Heaven. Edward the Fifth was strangled in the tower, by his uncle, Richard the Third.

Richard the Third was killed in battle. Henry the Seventh wasted away as niser ought to do, and Henry the Eighth died of carbuncles, fat and fury, while Edward the Sixth died of a decline, Queen Mary is said to have died of "a broken heart," whereas she died of a surfeit, eating too much of black pud-

Old Queen Bess is said to have died of melancholy, from having sacrificed Essex to his enemi James the First died of drinking.

Charles the First died on the scaffold, and Charles the Second died suddenly, it is said, of apoplexy.
William the Third died from consump-

tive habits of body, and from the stumbling of his horse. Queen Anne died from her attachment to "strong water," or, in other words, from drunkenness, which the physicians

politely called the dropsy.

George the First died of drunkenness. which his physicians as politely called an apoplectic fit,

George the Second died of a rupture of the beart, which the periodicals of that day termed a visitation of God. George the Third died as he livedmadman. Throughout life he was at

least a consistent momrch. George the Fourth died of gluttony and drunkenness. William the Fourth died amidst the

sympathies of his subjects.

A Japanese Eating-House. The most popular of all the eatinghouses of the capital is the Matsuda, on the Ginza, at Kiobashi, This is really an immense establishment, having acrooms are let for lodging purposes, and

cludes some twenty different dishes, largely on the state of the fish market. While no meat is served, fowls are cooked in a number of forms, and all kinds of liquors can be obtained. The sunset, when the fifty attendants are kept very active by the crowds of hungry and thirsty patrons. To the

passer by, the restaurant looks most attractive at night, when the rows of lanterns under the eaves, and the illumi-uation of the whole building, showing through panes of colored glass, present Dom Pedro's Escape. The Emperor of Brazil had a very

narrow escape recently. He was stand-ing on the track at Kings Bridge, Dublin, waiting for the train which would take him to Killarney. He did not happen to be watching the move-ments of the locomotives and suddenly his imperial majesty was struck by a train of thought which caused him to recollect that he had ten minutes to spare. He quickly inquired of those about him after this crowning feat just in time to take his place in the train. He therefore narrowly escaped losing the train.

Promise and Performance.

The proprietors of Hostetter's Stomach Bitters promise nothing in behalf of this famous tonic and regulating elixir which it will not perform. No presentions irreconcilable with common sense are made in reference to it, but evidence of the most positive nature has been accumulating for over a quarter of a century in its behalf, which proves to be a reliable preventive and curative of malarial diseases and efficient and genial tonic and general corrective, and specially valuable in cases where the bowels, liver, stomach or arinary organs are affected. Debility, the source from whence so many bodily evils spring, is entirely remedied by the invigorative action of the Bitters, which arrests premature decay and repairs losses of nervous and muscular power while improving the appetite and rendering digestion easy.

Caution to the Fublic.

We understand there are unprincipled grocers and dealers who palm off on unwary purchasers yeast powder in bulk or loose, for the genuine Dooley's Yeast Powder. For the protection of housekeepers and the public generally, we are authorized to state that the genuine Dooley's Yeast Powder is sold only in cans. Always refuse to take it except in cans, securely labeled. The fac-simile signature of Dooley & Brother, the manufacturers, is plainly printed on each label.

Kendall's Spavin Cure, discovered by Dr. B. J. Kendall, Enosburgh Falls, Vt., is a wonderful discovery,, as it cures all blemishes and removes the bunch without blistering. It is now sold by dealers throughout the country or sent to any address on receipt of one dollar. Sond address for circular giving proof of its wonderful effects and a list of agents, etc.
