4. It is a stimulant, and is beneficial to the system.

5. It is a nutritive, and is beneficial to the system.

6. It is a restorative, and is beneficial to the system.

7. It is a preservative, and is beneficial to the system.

8. It is a preservative, and is beneficial to the system.

9. It is a preservative, and is beneficial to the system.

10. It is a preservative, and is beneficial to the system.

11. It is a preservative, and is beneficial to the system.

12. It is a preservative, and is beneficial to the system.

MISCELLANEOUS, The Fatality of Overwork.

It is said that the financial crash of 1857 killed thirteen Bank Presidents in the city of New York. They were not all crushed to death instantly. Some were, and they were dug out of the ruins only to be buried.

Others survived several months. They dragged their shattered frames about from place to place. Some crossed the ocean, and wandered in foreign lands, seeking rest and finding none. Some lived on a year, two years, or more, wrecks indeed of what they have been.

"Dying at the top, as Deagan says, is the most painful death, but it is the least of the number invited at our time. Perhaps the number thirteen is an exaggeration. Perhaps it should not be stated at all. But more than that number of business men, men of finance and standing, on whom great burdens of responsibility have been laid, have succumbed to that storm, and now lie at rest in their graves.

At this moment, many men of high position in commercial and professional life—merchants, bankers, ministers, lawyers, and some physicians—are traveling in Europe in quest of repose of mind, relaxation from the cares of business, to have come too late a friend of ours, recently returned, has mentioned the names of some he met abroad who are searching in vain for a new lease of life—they are lying at the top. One is from—

He began in trade in that city less than ten years ago. He was vigorous from the start. As the grain was poured into his granaries, the gold of the greenbacks flowed into his coffers. Riches increased, and he sat his heart upon them. The more he had, the greater his greed for more. He gave his mind to his business all day and most of the night. He had small time to sleep, and none to pray. He is now sick and weak. In the prime of life, in the midst of his days, he was threatened with softening of the brain. He is dying at the top. A New York merchant is over with his family—

They say a man servant and a courier take care of him, and lead him from city to city and land to land. They were in Paris in the early summer, and at a German watering place later, and will winter in Italy or Egypt. He has no pain, and denies that he is overworked. He is lying at the top. Fifty clergymen, perhaps, have gone from the United States within the last six months, because they were overworked—or they overworked themselves. It comes to the same thing. Their people get out of them all they could get, and asked for more. They are weary, and they are giving up, and wanted to give them more. Perhaps as many lawyers, politicians, men in various departments of active life, have been compelled, for the same reason, to suspend their labors and seek in a foreign land a respite from that intense application to business which has threatened them with a premature burial. There are more men than any other country. We are the hardest-worked people on earth. The rush of mind in this country is unequalled elsewhere. In England the mind is contented with a room without windows. A book is good company. It is full of conversation without loquacity. It talks to you, not through the ear, but another way.

THE ELASTIC EGG.—Take a good and sound egg, place it in strong vinegar, and allow it to remain twelve hours; it will then become soft and elastic. In this state the egg can be squeezed into a tolerably wide mouthed bottle, when it should be covered with water having some soda in it. In a few hours this preparation will restore the egg nearly to its original solidity, after which the liquid should be poured off, and the bottle dried. Keep it as a curiosity, to puzzle your friends for an explanation how the egg was laid in the bottle.

INHABITANTS OF AN OYSTER.—Observations with a microscope have shown that the shell of an oyster is a world occupied by a considerable number of small animals, compared to which the oyster is a colossus. The liquid enclosed between the shells of an oyster contains a multitude of embryos covered with transparent scales, which swim with ease; a hundred and twenty of these embryos, placed side by side, would not make an inch in breadth. This liquor contains also a great variety of animalcula, five hundred times less in size, which give out a phosphoric light. Yet besides these inhabitants of this dwelling, there are also three distinct species of worms.

Brazil anticipates this year the largest harvest of coffee ever gathered.

Nitro-glycerine was discovered in 1847 by an Italian chemist named Sombrover.

The stock of flour now in New York is estimated at half a million of barrels.

Who is he? He that is teachable. Who is mighty? He that conquers himself. Who is rich? He that is contented. Who is honored? He that honors others.

Love cannot exist in the heart of a woman unless modesty is its companion, nor in that of man unless honor is its associate.

There was a Fenian ball at Norwich, Conn., recently, at which general and colonels appeared in full uniform of the "I. R. A."

A "bellows" fish was caught at New London, Conn., the other day, six feet long, and weighing four hundred and fifty pounds. His mouth was eighteen inches wide, and full of sharp teeth.

Large beds of decayed wood, like cedar, with numerous sea shells, have been found forty feet below the surface of the ground in Connessville, Ind., while digging to lay a railway track.

There is an old gentleman living in Claremont, Conn., who believes that the earth is flat, and that the democratic party is the only hope of the country.

A farmer in Wisconsin raised seven acres of hops this season, and made a clear profit of seven thousand dollars.

The sheriff of one district in South Carolina has sixteen hundred executions for non-payment of taxes in his hands.

Japan has shipped 1,000,000 pounds more tea to New York this year than last, all coming through direct over 100,000 pounds by way of San Francisco.

Josh Billings, in his advice to a young lady as to how she should receive a proposal, says: "You ought to take it kind, look down half with an expression about half tickled and half scared. After the pop is over, if your lover wants to kiss you, I don't think I would say yes or no, but let the thing kind of take its own course."

Heaven rarely grants to the same man the gift of thinking well, speaking well and acting well at all times.

A Ride in the Sewers of Paris. But a few of the Americans who visit Paris, know of the opportunity which may be afforded them to visit the very extensive sewerage of Paris, and examine its system.

Receiving cards of invitation, we stationed ourselves near the tower of St. Jacques, at an iron trap door, and the party were soon called upon to descend. Not knowing of the *modus operandi* of getting into these dark regions below, we all felt as if we were going to take a nap in the dark; but what was our surprise to find elegantly fitted up carriages or cars, lighted by four large globe lamps at each corner! These cars contained twelve persons each, and there were five of them, making sixty persons, which is the limit of the number invited at one time.

Of course our ride was limited to the large tunnel or main sewer, which was about twenty feet high and fifteen wide. The cars ran on a six foot gauge track, and are pushed on a down grade by two men to each car.

The water sewerage or drain is below, and is from six to eight feet deep, so that small boats can be towed all the way, and has down-grade enough to make quite a current. We rode by this train of cars across the Boulevard Sebastopol, to the head of Rue de Valenciennes, where we entered Tuilleries' gardens to the Place Concord, a distance of more than three miles, where we disembarked into boats, and sailed under the whole length of Rue Royale, coming out by the side of the Church of the Madeleine.

All along the whole length of the sewerage, the ground is covered with gratings at the head of each cross street, which are marked by the names of the streets on the side of the tunnel. By this means complete ventilation is secured. On the top of the tunnel are two large iron pipes in which passes through the sewerage the ground at almost any point. The telegraph would also be serviceable on such occasions. Besides this navigable sewer which is fitted up especially for pleasure trips, there are smaller sewers running under twenty-five of the principal streets, and the whole length of the sewerage of Paris, large and small, including that under construction, I was informed, is over three hundred miles in length, and by these means the drainage of Paris is effected on a magnificent scale, and far surpasses the subterranean wonders of ancient Rome.—Paris Correspondent.

BOOKS IN A FAMILY.—Give us a house furnished with books rather than furniture. Both if you can, but books at any rate. To spend several days in a friend's house and hunger for something to read, while you are under construction, is a most vexatious thing. Napoleon can transport, secretly, troops from one part of the city to the other, and the whole length of the sewerage is covered with gratings at the head of each cross street, which are marked by the names of the streets on the side of the tunnel. By this means complete ventilation is secured. On the top of the tunnel are two large iron pipes in which passes through the sewerage the ground at almost any point. The telegraph would also be serviceable on such occasions. Besides this navigable sewer which is fitted up especially for pleasure trips, there are smaller sewers running under twenty-five of the principal streets, and the whole length of the sewerage of Paris, large and small, including that under construction, I was informed, is over three hundred miles in length, and by these means the drainage of Paris is effected on a magnificent scale, and far surpasses the subterranean wonders of ancient Rome.—Paris Correspondent.

There are also three lines of telegraph wires enclosed in lead pipes. It is well known that the great sewers are built for a double purpose, and one is for the underground transportation of troops in the time of an insurrection or war. By this means Napoleon can transport, secretly, troops from one part of the city to the other, and the whole length of the sewerage is covered with gratings at the head of each cross street, which are marked by the names of the streets on the side of the tunnel. By this means complete ventilation is secured. On the top of the tunnel are two large iron pipes in which passes through the sewerage the ground at almost any point.
