

AN exchange refers to the fact that under the school laws of Pennsylvania the authority of a teacher in directing the conduct of the pupil in his or her large begins when the child departs from a home for school and only ends when it returns again to that abode.

THE VALUE OF HUMAN LIFE.

The Medical Classics in putting a money value on human life, has been at some trouble in ascertaining what it is worth. Going back to the times of American slavery it finds that a fairly good negro field hand was valued at about \$1,000, and a skilled mechanic was worth over \$2,000 to \$2,500. Dr. Thur says in England an agricultural laborer, at the age of twenty-five, is worth, over and above what it costs to clothe, shelter and feed him, \$1,191, and taking men, women and children he puts the average value of each at \$771; while Edwin hadwick places it at \$800.

Now we don't go much upon the correctness of any of these estimates since we find, as we have seen specimens of the tramp type, who with all their accumulation of that which constitutes an estate, would not sell for a nickel a year.

DISCUSSING SHAKESPEARE.

The discussion in educational circles seems to be one of the necessary consequences of progress, but why it should prevail to the extent it does in a Democratic country is one of the unaccountable peculiarities of the public mind. Concerning President Harrison's domestic affairs are what all over the nation with as much particularity as are those respecting a disaster by water or fire. If it should go to church on Sunday, dispend by over the wires telling to what church he went and who flattered in the pulpit, and if a communion day the manner of how he partook of the bread and wine is detailed, next Sunday morning the Sunday papers generally, had an account of Blaine and John eating supper with the President at Deer Park on Saturday evening, with a customary reference to Lady Becken.

NEWS OF THE WEEK.

Ex-Lieutenant Governor Clarence F. Black, who has been a Philadelphia reporter, and his remarks are particularly clear and to the point. From his emphatic expressions we take that Mr. Black intends to be the champion of the cause of the pensioners in political warfare, also William C. Wallace, prominent and gentlemanly the gubernatorial race.

It is manifest to those who keep the political barometer in view, that William C. Wallace, states politician and political wanderer, is setting up his "game" this early in the day to the end that he may occupy the chair of honor if it is in the scale.

William, like Tony Hagstock, is "sly," sly, devilish sly.

Mr. Black fought the last campaign which he was a candidate, with indelible courage and very great success, simply because the Democratic forces throughout the State were badly demoralized. In his interview he intimates that he is about descending to the tricks which were shown and used. Mr. Wallace and I agreed, in public declaration in 1885 that we would never do for the seat of Governor would degrade it personally suffering delegates.

The ex-Lieutenant Governor went on to say: "I have no idea that there will be any comeback or any trap laid out for the party in 1890. We will go to the state on the same terms and principles on which we stood in the campaign of '88. Upon them we would offer the strongest opposition of the general with a Republican machine, finally fall to be opposed by a Democratic position of the most unscrupulous quality, by sustained antagonism, fully sustained by the votes of both the Republican legislature and the Republican Governor, and by the growing conservatism of the party in favor of the superior management of the Constitution."

It is in fact the superior management of the Constitution which has so far all recorded the Republicans in that respect fully to be by an adoption of the state laws concerning law.

In these proceedings there are the promises of that Democratic machine that will be the result of the party. They were confirmed by the Democratic which announced right to follow the majority, and they will be followed the majority will be followed at Government, as we who are not tied down to any party, but we will be the result of the majority.

It is in fact the superior management of the Constitution which has so far all recorded the Republicans in that respect fully to be by an adoption of the state laws concerning law.

Many things that are to be done by money, and we have seen how well it is done. It is in fact the superior management of the Constitution which has so far all recorded the Republicans in that respect fully to be by an adoption of the state laws concerning law.

make things they describe not only uncertain in their details, but doubtful as to their main facts. Ancient historians, such as those of Greece, Rome and Egypt, were written by men of lively imaginations—written in the true oriental style that dealt largely in hyperbole. Some of it, in fact a good deal of it, by writers like Xenophon, who is rightly styled "the father of lies."

But aside from ancient history much of the modern kind is full of uncertainties owing to a want of correct information, and to a particular bias of mind in other instances. The various attempts to write up scenes in our late rebellion furnish striking proofs of the uncertainties of even quite modern history. Those who read the series of papers published in the Century Magazine, and the numerous corrections, know how difficult it is to reconcile the conflicting statements of men who were eye witnesses and participants in many of the scenes described. But still later, take the many conflicting and absurd stories that were written by parties from Johnson respecting our disaster. Many of these imaginary things will go into history, and in after years will be referred to as "historical facts," which we now all know to be mere fictions.

We do not wonder at the doubts and uncertainties that cluster around the authority of the plays usually ascribed to Shakespeare. Though only dating back a few hundred years, the question now is who wrote them? If Shakespeare, who was he anyhow? What literary advantages had he? Some writers say he was a man of no learning—of no recognized literary abilities, and, therefore, he could not have written them. Hence, the Baconian theory.

But on the other hand a distinguished writer comes forward with a volume of proofs to show that Bacon could not have been their author, so he was nothing more than "a mean, bootlicking courtier—a pedant, addicted to all the vices of his times—setting himself up for a wit and affecting authority," and in a word, what Pope calls him, "the monument of mankind." This same writer, Rev. James Freeman Clarke, of Boston, lays before us a mass of evidence to prove that Shakespeare, was one of the most noted scholars of his age, and not only wrote all the plays bearing his name, but was the paid author of all the works ascribed to Bacon.

We only refer to this to show that a good deal of what is called history, might come under the head of fiction; and that people who are voraciously devouring things by their array of historical facts, might prove them by some more plausible means.

PENSIONERS AND PENSIONERS.

There are some things connected with the affairs of our general Government, whether they are in the hands of Democrats or Republicans, that get awfully mixed up occasionally, and which require a great deal of patience on the part of the public, and very many explanations by those who are conducting them. An instance of which is now furnished in the modified affairs of the Pension Bureau. Since the retirement of Corporal Turner much has been said on the alleged loose-ness, to put it mildly, in the way of re-issuing of pensions were made, and at savings allowed. The other absence of any official announcement concerning the matter, other than the fact of the General's ordered retirement, opens a wide door for guesses and speculation as to the true whereabouts of that department.

In the face of the wide spread dissatisfaction prevailing in Grand Army circles over the displacement of Corporal Turner, it is rather a delicate and ungenerous act to criticize the operations of the Pension Bureau, but the motive is constrained into opposition to granting pensions to our honored and injured veterans. We yield to no one in advocacy of liberal pensions to truly and worthy soldiers, their widows and orphans. The people all over this land not only owe them a debt of gratitude that never can be paid, but our Nation is indebted to them to the amount of millions that should be paid to them by liberal pensions.

But while all this is true, we cannot close our eyes to the fact that irregularities and want of accuracy in the Pension Department have led to impositions, by which hundreds of thousands have been wrongfully drawn out of the nation's treasury. The conversations touching friends of this nature have been more than confirmed by an article in a popular weekly of recent date, in which facts and figures tell a tale that ought to arouse the indignation of everyone all over the country. The greater outrage could be perpetrated than that of fraudulently drawing from a fund which rightly and properly should be laid out in the interests of those made dependent by serving their country in the line of duty.

The list of pensioners now being out of all proportion to the number of widows, divorced and dependent soldiers and widows and orphans of soldiers.

It is in fact the superior management of the Constitution which has so far all recorded the Republicans in that respect fully to be by an adoption of the state laws concerning law.

400,000? And all this to be remembered in the course of four years.

There can be but one plausible way of accounting for this long list of pensioners. It is the natural work of the hands of men called pension agents, whose integrity in manipulating claims is only equalled by their greed. It is not too much to say that by their wiles and machinations they in many instances induced old soldiers to believe and swear that their ailments and infirmities, peculiar to advanced age, were the result of injuries received while in the Government service.

On this subject a New York veteran, Edward G. Shirley, of the N. Y. 92d., in a letter, dated Albany, N. Y., August 20, 1890, says: "After three years and a half service in helping to put down the rebellion, I returned home with a depleted pocket book, and with health, never very rugged, considerably the worse for exposure and privations, and applied myself to business in order to make a living, believing the Government did for me all it agreed to, and if I had been so disabled as not to make a living would have granted me a pension. While some are quite able to make a living, are gratified in receiving a pension check every three months, I have far greater gratification because I do not get it. Fortunately there are thousands of veterans who served all through the war, who do not go around wearing a big badge, and who do not claim positions or money for services rendered as patriots during the rebellion—feeling they only did their duty."

During the last presidential campaign Republican stump orators shouted themselves hoarse to impress on workmen the benefits labor would derive from a Republican Administration. Certain manufacturers went so far as to inform their employes if a Democratic President was elected they would be compelled to close their establishments. This is all changed now. Their great love for the working-man is on the wane. Several large manufacturing concerns have gone by the board, notwithstanding they were protected by a very high tariff. The latest case comes from North Adams, Massachusetts. The shoe manufacturers have had trouble with their employes. In order to check the labor problem they threaten to hire Chinese to do the work, and it is declared if the Chinese are brought in a riot and massacre will ensue immediately. Noe food for reflection for the workmen.

Edison's plans are soon to marry Miss McCormick the millionaire heiress of the man who invented the reaper. An extensive public will await with anticipated curiosity to see whether he and his crazy mamma will pursue the same course of treatment toward the young bride, that she and her other son did to Mrs. James G. Blaine, Jr. As there are "millions in it," however, mamma may order a honor public course in matrimonial days.

Dr. Beebe's Freight Train Contract, sometimes after the food a lady came late in search of her husband. She gave her name as Mrs. Catherine Hart. She was without money, and owing to this fact, and also the fact that she could not tell whether her husband had been at work in Johnston before the flood or not, she was considered by quite a number of people as an adventuress. In her extremity she applied to Rev. Dr. Beebe. Relating her story to the gentleman he was rather favorably impressed with the woman and promised her all the aid possible. As it well known the doctor had, and has at the present time, a valuable book, his own personal property, which contains a description of all the bodies received at the different morgues. The woman gave a description of her husband's clothing, and when the morgue book was referred to, the number of a body, which was entered in the log book in Grand View, was found and corresponded with her description. The good doctor exhibited the sympathy of some friends and enough money was secured to enable Mrs. Hart to leave the remains disinterred. The book seemed like a treasure chest, as the trunk contained as many bodies, but it was undertaken, and strange to relate, the first body taken out was that of her husband.

The remains were re-interred and the lady left town. She came back again last Saturday, and will remove her husband's body to their former home.

Why They Took This Home. He was a delicate little chap, and he had not much appetite. He was also a plain man and easy to get into a boy's suit. They got him one and told him if he did not eat he would not fill his clothes. He ate, he loved himself to eat, so we as afraid they would take him away again. His mother took him with her to visit some friends. There was a beautiful garden, charming indeed, young lady. The party was at dinner, and the d. State little chap was sitting there gorging and belching. The youngest young lady was in love of something, I suppose some interesting young man had captured her mind and she, something very tender in doing something very silly, she was not eating any thing.

They think her pretty to be left with appetite. Thus the delicate little chap looked across the table and said "You'd water out something or your pants won't fit you."

They took this home. The National Democrat is the name of a new paper, published at Washington, D. C. It is a weekly paper, with all the things that are going on in the world, and it is a very interesting paper.

Worse Than Whisky. A discovery of immense scientific interest has recently been made near Wharton, Texas, a discovery which it is thought will add a little more to the element to the sixty-five already familiar to the chemist. Mr. Chas. H. Mason, a prominent cotton planter, living about five miles from town, while boring an artesian well on his place struck water a few days ago at a depth of 215 feet. A powerful stream was thrown up with a loud report and a slight trembling of the surrounding earth. Mr. Mason, in order to test the quality of the water, drank a glass of it, and the negro workmen also crowded about and drank freely of the water, which was found to be very cold and good, though possessed of a slight unfamiliar flavor, which was, however, not disagreeable.

Within a quarter of an hour, or even less, after drinking the water, Mr. Mason began to feel strange twinges in the muscles of the face, and his workmen also commenced to complain of the same sensation. This twinging soon extended to the arms and legs, increasing all the while in violence, until at last the negroes cast themselves down, crying that they had been enjured, and relied about on the ground shrieking aloud and writhing with hideous contortions of the face and body. As the jerking and jumping of the muscles of the limbs grew more and more violent, all hands sprang up and joined in a wild, uncontrollable dance, or rather hopping up and down like so many demented frogs.

Mr. Mason, describing his sensation, says that he was conscious of a feeling of great exhilaration and an increased sensibility of every sense. The sight of the hopping negroes, who were too frightened to realize that they were suffering only from fear, and their cries and shrieks provoked him to bursts of laughter that sounded almost morose. Mrs. Mason, seeing her husband's extraordinary behavior, became alarmed and, running out, attempted to help him down, but, though he endeavored to get at her by clinging with all his strength to a post, it was found impossible to restrain him.

The dance was kept up, says a Philadelphia Times correspondent, until after explanation caused the temporary participants to fall prostrate to the earth, where they lay and kicked for some minutes, after which they fell into a deep sleep. This sleep was the least, however, less than that which follows intoxication, and lasted for several hours, but, like that with other kinds and several consecutive beyond a seizure of the back and limbs, and a pain in the face resembling neuralgia, which, however, soon passed away.

Mr. Mason sent a jug of the water to Houston to have it analyzed, but the chemists of that city profess themselves at a complete loss to account for one of the elements entering into the composition of the water, and give as their main reason opinion that it may be added to the number of known elements at a future date. This element imparts to the water a beautiful bright blue tinge of a beautiful hue, and gives it a taste more like that of fresh ether than anything else. When the water is heated this element passes off in a colorless gas of a most agreeable odor, resembling the perfume of tuberose, only more penetrating and pungent, and so powerful that a pillow of the water steaming over a stove for a few minutes imparts to the room a delicious perfume. Taken from the well and left to stand, however, the water loses its beautiful color and likeness to the consistency of turpentine, with a faint granular tinge, and will, when drunk or inhaled, produce violent nausea and vomiting. Accompanied by a numbness in the head and a feeling of the light and burning, which lasts for hours.

WORSE THAN WHISKY

AN ARTESIAN WELL IN TEXAS THE WATER OF WHICH MAKES YOU DIZZY.

Discovery of a Wonderful Natural Fluid—Negroes Made to Dance and White Frogs Affected Strangely—Some Lacerations and Lacerable Wounds.

A discovery of immense scientific interest has recently been made near Wharton, Texas, a discovery which it is thought will add a little more to the element to the sixty-five already familiar to the chemist. Mr. Chas. H. Mason, a prominent cotton planter, living about five miles from town, while boring an artesian well on his place struck water a few days ago at a depth of 215 feet. A powerful stream was thrown up with a loud report and a slight trembling of the surrounding earth. Mr. Mason, in order to test the quality of the water, drank a glass of it, and the negro workmen also crowded about and drank freely of the water, which was found to be very cold and good, though possessed of a slight unfamiliar flavor, which was, however, not disagreeable.

Within a quarter of an hour, or even less, after drinking the water, Mr. Mason began to feel strange twinges in the muscles of the face, and his workmen also commenced to complain of the same sensation. This twinging soon extended to the arms and legs, increasing all the while in violence, until at last the negroes cast themselves down, crying that they had been enjured, and relied about on the ground shrieking aloud and writhing with hideous contortions of the face and body. As the jerking and jumping of the muscles of the limbs grew more and more violent, all hands sprang up and joined in a wild, uncontrollable dance, or rather hopping up and down like so many demented frogs.

Mr. Mason, describing his sensation, says that he was conscious of a feeling of great exhilaration and an increased sensibility of every sense. The sight of the hopping negroes, who were too frightened to realize that they were suffering only from fear, and their cries and shrieks provoked him to bursts of laughter that sounded almost morose. Mrs. Mason, seeing her husband's extraordinary behavior, became alarmed and, running out, attempted to help him down, but, though he endeavored to get at her by clinging with all his strength to a post, it was found impossible to restrain him.

The dance was kept up, says a Philadelphia Times correspondent, until after explanation caused the temporary participants to fall prostrate to the earth, where they lay and kicked for some minutes, after which they fell into a deep sleep. This sleep was the least, however, less than that which follows intoxication, and lasted for several hours, but, like that with other kinds and several consecutive beyond a seizure of the back and limbs, and a pain in the face resembling neuralgia, which, however, soon passed away.

Mr. Mason sent a jug of the water to Houston to have it analyzed, but the chemists of that city profess themselves at a complete loss to account for one of the elements entering into the composition of the water, and give as their main reason opinion that it may be added to the number of known elements at a future date. This element imparts to the water a beautiful bright blue tinge of a beautiful hue, and gives it a taste more like that of fresh ether than anything else. When the water is heated this element passes off in a colorless gas of a most agreeable odor, resembling the perfume of tuberose, only more penetrating and pungent, and so powerful that a pillow of the water steaming over a stove for a few minutes imparts to the room a delicious perfume. Taken from the well and left to stand, however, the water loses its beautiful color and likeness to the consistency of turpentine, with a faint granular tinge, and will, when drunk or inhaled, produce violent nausea and vomiting. Accompanied by a numbness in the head and a feeling of the light and burning, which lasts for hours.

The negroes about here, distinguished the well "Devil's Water," and regard it with superstitious awe, and with the exception, caused by previous eyes to even to drink it. This exception is an old Turkey head known as Frank Brown, who is usually known as a "water-drinking" man, and who, in a very quiet way, is known to be a "water-drinking" man.

One day I was taken with chills and headache, right that my old enemy, malaria, was on hand. My quinine box was empty, and I was looking forward to a rest, sleepless night. In desperation I got a jar of water and slowly ate it, and then went to bed with water feet and an extra conductor, when presto! I was asleep in five minutes, and awoke in the morning free from malaria and ready for the day's duties.

Our hourly hot steam friend will be appreciated in time as a medicine, and if agriculturalists would turn their attention to raising a useful mine, with the strong steam boiler that takes the heat so regrettably, families will be getting their "chills" in the cellar by the hundred, and the doctors would be busy making. The water is a valuable and medicinal, and may help to break up a cold or loosen the chest symptoms. And a doctor: "I always store a barrel of water in my cellar during the fall. We have been taken down a week, and without the help of the water, I could not have been so well as I am now. It is a valuable and medicinal, and may help to break up a cold or loosen the chest symptoms. And a doctor: "I always store a barrel of water in my cellar during the fall.
