### INSIDE

### NEWS

No, not really, but a lot of students would pay top dollar to see that; actually we just wanted to get your attention, but now we forgot what we were going to say here.

Hey, you never know. Maybe we have Britney Spears and Josh Hartnett, you'll just have to look inside and find out for yourself.

Strange odors coming from the SGA office?

Check out all of the funny stuff written by this extremely funny man!

The "don't kill us, this is all a joke for April Fool's Day" disclaimer is located on Page 4

## Behrend adopts Macintosh platform for entire campus!

by Bob editor-in-chief

Intern Provost and Dean Jack Burke recently announced that Apple Computer bought Penn State Behrend and the campus will soon adopt the Macintosh platform for all computing purposes.

Apple Computer, under the keen insight of Steve Jobs, will rename the campus "iBehrend" and use its facilities to harbor new and more

powerful G4's and even cooler-looking iMacs.

"Any remaining PC's will be disposed of in an orderly fashion; some will be kept for experimentation, but for the most part they will all be recycled into remote controls and watches," said Jobs.

"Macs are great. I really wish we adopted this platform years ago," said John Hoffman, iDirector of the new Mac Computer Center.

"They're virtually superior to any other computer."

Jobs stated that the new iMacs arriving at Behrend will feature three internet hook-ups, so students can download more crap like Britney Spears music onto their computers at triple the speed.

"We're just happy that the students accepted the transition with such great enthusiasm," said Jobs.

"Once we explained the new internet hook ups and the development of iCrap, a new crappy music downloading program, the students were overwhelmed with joy. It even brought a tear to John Hoffman's eye."

Students will be able to trade in their crappy PC's for a new iMac within the week.

## Bruno's discovers way to cook warmer than room temperature

by Ben K. village idiot

Recently, in a landmark discovery, an employee at Bruno's discovered it is possible to heat food above room temperature. When interviewed the student (who wishes to remain anonymous) said, "I was in the back burning my chem book in a garbage can when I accidentally dropped the Chicken Spazmo I was eating into the fire. I picked it back up and was amazed to find that the Chicken patty was warmer than 78 degrees!"

Amazed by her discovery, the student immediately told her supervisor. Due to the proprietary nature of any food-related discoveries made by student employees, no recognition will be given to this student pioneer.

"Stephen Hawking can kiss our asses! All he did was prove that if general relativity is true and the universe is expanding, a singularity must have occurred at the birth of the universe!" said the supervisor, who wished not to be named until Bruno's discovery received proper recognition from the scientific community.

"This is the most important discovery in thousands of years - who would have thought that food could be served warmer than 78 degrees Fahrenheit?" We always believed that heating food above this "absolute maximum" would cause it to spontaneously combust or possibly open up a wormhole.

Although all Housing and Food Service employees from the top down are excited about this discovery, they aren't quite ready to heat their food to these unheard of high temperatures.

"Students are used to eating burgers, chicken wraps, pizza, and Spazmos that are only slightly warmer than their soft drinks. We don't want to alarm them by giving them food that is actually hot. Besides, we haven't perfected the technology yet to cook and hold food above room temperature."

Housing and Food Service has enlisted the engineering department to help design new equipment. Thomas Edison, head of the School of Engineering and Engineering Technology was contacted by the Bacon about their work in the field of food warming.

"Housing and Food Service know what they're talking about. They go to any commercial food service supply company to purchase equipment to keep their food above 78 degrees. We're just acting like its some amazing feat to heat food above room temperature so we can milk them out of a ton of money. Suckers.

According to their plans, within four or five months food will be cooked above 120 degrees. "We're going to

phase in these new higher temperatures. We think students might be scared of so called 'hot' foods, seeing them as some sort of voodoo."

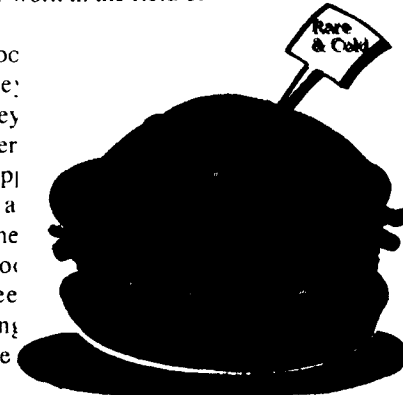

In order to gauge student opinion on this newfangled form of food preparation, several random students were interviewed around campus.

"Hot food? That's just crazy. I like my burgers no hotter than 75 degrees. Them people from the health department said its not real good to eat red meat that's less than 150 degrees, but like Charlton Heston says, 'what doesn't kill you only makes you stronger, you damn dirty ape!'" said Mitch Buchanan, DUS 10.

"Food warmer than room temperature? I've had coffee before that was pretty warm, but I don't know about eating a hot chicken sandwich. I heard that will burn a hole in your stomach." Said Molly Ringwald, Elish 015.

Ten other students were interviewed and all had similar reactions of superstition and fear.

On behalf of the Bacon staff, we urge you, Bruno's, keep the kids happy - KEEP THE FOOD COLD!

## Cinematography major, new Polygon club among new additions at Behrend

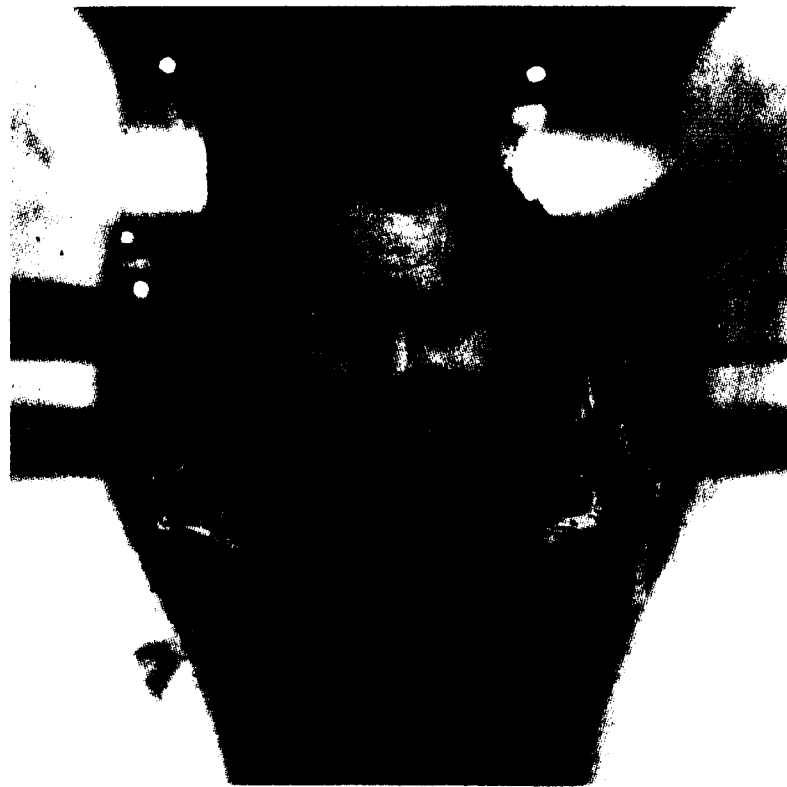

by Anthony Ryan resident hippie

With scheduling now occurring for the upcoming summer and fall sessions at Behrend, students should be aware of several changes in the school's near future. A number of new courses will be offered and several new clubs will be forming.

Behrend's Humanities and Social Sciences department will be greatly expanded with a new major and supporting course offerings. Students will be able to earn a degree in Cinematography and Pornography, adding either directing or acting as a minor.

A recent donation to the school by an unknown source in Hollywood stipulated that the money be used to create a program that would support the adult film industry. It also provided money for a scholarship. The donor wishes to be unidentified, but the title of the new scholarship is the L. Flint Award.

Using the new funding, the H&SS hired a number of distinguished faculty and purchased supplies necessary for the courses. Among new faculty members who will be seen on campus in the fall will include Ron Jeremy, Tonya Harding, Jenna Jameson, and Beetlejuice, of Howard Stern fame. H&SS is not the only school

Dr. Ron Jeremy and Dr. Jenna Jameson will join the Behrend faculty next year as gender studies professors.

to add a new major. The School of Engineering and Engineering Technology will offer students a degree in Custodial Engineering. Custodial Engineers, of course, are the fearless and dedicated individuals who spread sawdust over vomit in grade schools everywhere. Though this has been a male-dominated industry, the school is encouraging females to become involved in this fast-paced, exciting field of study.

"I can't wait to get started on my classes," said one current Electrical Engineering major. "Electrical engineering is too

hard, but I think custodial might be right up my alley. I already bought my mop and bucket of sawdust so I can get a head start on my semester."

Several new clubs will form over the next few months at Behrend as well. These new clubs will attempt to reach out to students who are not yet involved in campus activities because they have not yet found something they can totally connect with.

The overall goal of the new clubs is to make the campus diverse enough that everyone can be involved in something.

The first new club will be called Polygon. According to the founder, this club has been formed because the current club Trigon is not inclusive enough. "Tri means three, and there are some students whose sexual interests and escapades involve more than the three sexual orientations included in Trigon," she said. "With Polygon, students who are into animals, Jell-O, masochism, play dough, or whatever else will be able to take part in discussions and activities promoting their sexual health and hi-jinks."

Another new club is the

Unicultural Council, or UCC. A great number of these clubs are forming, because, as one member stated, "I do not care to be multicultural. I am proud of being 100 percent Lebanese and I want my heritage to stand out." Another student said that he did not wish to share his ethnicity with other members of a different ethnic group. "I want to be part of a group of other people just like me. I don't go for that multicultural she-nanigans. One is good enough for me."

Always one to start new things on campus, Bacon writer Mike Butala started a group called "Men Today." He cited his reason for starting the club as an opportunity for men and women to be part of something that does not offer the same point of view as Women Today. "I just want everyone to hear both sides of the story," he said. "It's not that I don't like women. I just want to provide students with an opposing view of that offered by Women Today."

Within a week of the announcement of this club, it became the largest student-run organization on campus; virtually every male on campus joined.

So if you are planning on becoming involved with student life next semester, there are a number of options. Attend a meeting and see which clubs are right for you.
