## Students Critique

### Reader Article

From Page 1

racial relations are fairly good on this campus, and everyone should realize there is no way to avoid some hassles." (name withheld by request.)

"I feel a lot of incidents between blacks and whites, as reported in the paper, might not have been racial incidents but just differences of opinion. I think people base their racial disagreements on stereotypes instead of taking the time to see what the individuals are like and what type of personality they have." (name withheld by request.)

"I thought it was publicity seeking for a headline. They made a mountain out of a molehill. The basketball game wasn't relevant and shouldn't have been reported in that context. Each person, individually, must fight the racial problem, and this is the only way the racial problem can be solved." (Gordon Jackson, 8th term, psych-soc.)

"I found it (racial article) enlightening about a situation that I didn't know was occurring. It brought the issues out front." (Annelle Harris, 8th term, elementary education)

"I didn't think the article

## Singles Wanted

Are you a single and interested in meeting others?

Come and join Business and Professionals for Young Adults.

Meets Tuesday evenings at Market Square Presbyterian Church, Hbg.

Activities: square dancing, bowling, roller skating, etc.

For more information call 732-9802.

was forceful enough. It didn't reach the underlying symptoms of racism on campus. It should have been more deeply researched. I think an investigation should be made to determine why we have racism on campus. I think blacks and whites should be required to take the "race and racism" course offered here. It would be a step in the right direction." (Jimmy Perkins, 8th term, bus. adm..)

## More Engineers Needed

Unless colleges and universities graduate a lot more engineers than they do now, the United States can't become "energy independent," predicts the dean of the College of Engineering at The Pennsylvania State University.

"For example, to meet current demands, universities should be graduating 35 to 50 percent more nuclear engineers than they are," says Dr. Nunzio J. Palladino, who is himself a nuclear engineer.

Dean Palladino points to a recent study by the National Planning Association of the National Science Foundation which concludes that if the United States is to reduce its dependence on foreign energy sources at anticipated levels, the employment of engineers in the domestic energy industry may have to double within the next decade.

The biggest increase in demand for engineers by 1985, says Dean Palladino, will be in the fields of nuclear and mining engineering, followed by electrical, chemical and mechanical engineering.

The National Planning Association report says that 141,000 engineers and scientists were employed in the seven major energy-related industries in 1970, and by 1985 this total is expected to reach 307,000.
