

Meghan Rothschild  
didn't think  
indoor tanning  
would hurt her.

She was wrong.

UV light from indoor tanning,  
especially when exposed at an early age,  
can increase your risk of melanoma...  
the deadliest form of skin cancer.

That's what Meghan developed when she was 20  
after being a frequent indoor tanner  
since she was 17.

Current estimates show that 1 in 5 Americans  
will develop skin cancer.

Do you want to be the one... like Meghan?

Indoor tanning is out.
