### Aems of the Week.

#### GENERAL.

The English and American National Debts Compared.—England owes \$4,000,000,000. We owe \$2,500,000,000. Eugland pays \$120,000,000 a year interest. We pay \$150,000,000. England pays three per cent. We pay six. How about the credit of the two countries? England borrows all she wants at less than help the payers of interest. wants at less than half the percentage of interest the Government of the United States pays, and the reason why she does it is, that she holds the corhave been turned as severely as England's wealthy creditors will bear, and the total is \$270,000,000 per year. We have had to stand \$500,000,000. England has \$32,000,000,000 of wealth to tax. We have not half that sum. The back bone of this country was broken in 1866, when we raised that big load of \$560,000,000; and we have shown signs of increasing weakness since that period. At this moment, "our resources" do not permit us to raise rect idea on the subject of taxation. The screws moment, "our resources" do not permit us to raise much over half the sum above mentioned. With all our boasting, the English capitalists know exactly our national calibre. They know exactly our resources. They have a clearer conception of the limit of our credit, a more perfect comprehension of our property-increasing power, than we ourselves have, for it is their business to study these things, and we have been given a degree in the great na-tional mercantile agency books of the European capitalists, below that of half a dozen of the old dynasties, which we are pleased to denominate "rotten." It is quite likely that we could not borrow a dollar at six per cent. when Austria could obtain it at half that rate. Our six per cent, londs. are on the market to-day in Franklort, with no sales, while those of Austria, paying only four per
