

U.U.C. Radio Program

Mr. Taylor, Mr. Thorpe, and Dr. Pendell are on a committee which is planning a series of radio programs to be broadcast over the local radio station WAZL. The first program will be presented on Monday 16, at 8:15 P.M.

The broadcasts are being arranged so that they will appeal to people interested in either technical or non-technical subjects. Scientific data, geographical, historical, and mechanical aspects of the war, important facts concerning our relations with Asia, South America, and Europe will be presented by members of the faculty and prominent men and women of this region. Present plans call for the lecture and forum type of program.

The radio committee would appreciate student comments and suggestions. Especially would it be pleased if students would submit subjects of general interest and value.

SKETCH CLUB

Why don't you gather your pencils and erasers some Tuesday night and come to the Sketch Club? Yes, we have a meeting every Tuesday night, and those prospective "artists" seem to be developing some talent.

The work, or rather the recreation, participated in is very interesting. Already the members have sketched from still life, done some work in pastels, and sketched pictures. Now we have started to make book-plates. At the last meeting the members sketched the designs for their plates, and next week we plan to transfer them to linoleum blocks and begin cutting them.

Oh, you can't sketch? We couldn't either, but we learned, and even learning was fun. And now this club is one of the most active in the Center.

If you are interested in the Sketch Club, watch the bulletin board for the time of meeting.

E.S.M.D.T.

For the forth time in the last fifteen months the U.U.C. offers special defense courses to men and women in the Hazleton area. These courses sponsored by the U.S. Office of Education serve the two-fold purpose of increasing the efficiency of the employed worker and of training others to meet the ever increasing needs of the nation's war industries.

The new program will be more flexible than those of the past in that a more extensive range of subject matter will be covered in both elementary and advanced work dealing with engineering, applied science, and management.

In the field of engineering, Chemistry of Engineering Materials, Engineering Drafting, and Advanced Engineering Drafting are a few of the courses offered. In applied science, Metallurgical Inspection D, Physical Metallurgy II, and Fuels Analysis are but a few of the courses offered. In Management there are courses in Auditing, Advanced Corporation, Manufacturing Accounting, and Production Control.

Registration will be held February 16, 1942 Between the hours of 7:00 P.M. and 10:00 P.M. Classes, for which no college credit is given, will start Wednesday, February 23.

(con't. from page 3)

handsome, dashing, former student of Military School!

Nancy Yost has gone "Frenchy". I believe it was "Mademoiselle" that caused the return of pigtails.

Did you hear the latest name for "Pepsi Cola"? Our students call it "poison". Even "Doc", after an analysis of it, agrees as to the appropriateness of its new name. I wonder why Torrence still lives.

Kate here's your chance to do your part for the nation. Get defense bangs and save for defense guns.

I remain until the CENTER wins a basketball game,

Your own Sadie
