
SOCIAL COMMITTEE NEWS

On Tuesday, October 19, a meeting of the Social Committee was held in Room 207. A majority of the members attended and most of the business for this semester was discussed. It was decided to have a Halloween Party on Friday, October 29, in the Main Lounge. Plans were made to have a three-piece combo for this party. A schedule or calendar of events was drawn up for this semester. Dates were set for dancing classes and for the Thanksgiving and Christmas Semi-Formals. Committees were also set up to plan for the Halloween party.

With all the business at hand settled, the meeting was adjourned until next week.

SCIENCE AND ENGINEERING CLUB NEWS

The Science and Engineering Club held its regularly scheduled business meeting on October 18, at 7:30 p.m. A new planning committee was appointed whose members are Glenn Miller, John Kubiskin, and Mauro Walker.

A program was presented by Paul Fidishun and Tom Massage on the control of the gyroscopic effects confronted in rotary wing aircraft.

Since this is a new organization, the assistance of the Freshman students is very important if the club is to be successful in the future semesters.

The next meeting will be held November 2, at 7:30 p.m. in L-3.

ROVING REPORTER

It was suggested by Dave Drasher that I find out "How high up is up?"

Russ Morgan-"Well it's a good question anyhow."

Walter Seeley-"Huh! What's this for anyhow?"

Mike Ohl-"It's an infinite measure which if elongated enough will meet itself coming down."

(I guess that answers your question Dave)

C. Klosick-"It's in feet, the hyperbolic tangent of theta multiplied by the speed of light."

Joe Bielen-"Wait until I get out my slide rule."

Tom Zubach (Zoom Zoom)-"Wherever you're going."

John Kubiskin-"Not quite that far."
