THEM ALL

In sizes from  
100 gallons to  
700 gallons capacity

\*DARI-KOOL CAN OPERATE  
ON LOW-COST "OFF-PEAK"  
ELECTRIC RATES

No other cooler can match Dari-Kools fast cooling and year-after-year low operating and maintenance costs

• Milk is cooled to 38° in only one hour—assuring a lower bacteria count and better milk. The milk cannot freeze because it is cooled with ice water.

• Dari-Kool's inner milk tank—with its moist, refrigerated side walls—retards the formation of milk stone. This makes Dari-Kool tanks much easier to clean.

• All Dari-Kool tanks are stainless steel—inside and out (not painted black iron). A rugged 10-gauge steel frame and pre-expanded milk tank assure accurate calibration and correct payment. Dari-Kools are electronically calibrated at the factory.

• Compare them all and you'll choose a farm-proven, guaranteed Dari-Kool—America's largest-selling bulk milk cooler.

# Eggs Belong *in everybody's breakfast*

Millions of people of all ages will enjoy this remarkable food tomorrow morning. Will you be one of them?

Eggs belong in your breakfast because they are practically perfect protein food to satisfy your hunger—build your energy—bring you to the mid-day meal without let-down. Eggs are quickly and easily prepared—as sizzling sunny-side-ups—as fluffy omelets—poached, boiled—in golden, nut-sweet scrambled form or any number of appetizing ways.

A marvelously complete natural food, eggs are pre-packed by Mother Nature with a wealth of balanced nutrition. Vitamins and minerals in abundance plus a special kind of protein so near to perfection

that scientists use it to measure the value of protein in other foods!

Remember, too, that if you're watching your weight, the egg's low calories are for you. Eggs "stick to your ribs" but are kind to your waist-line. What's more, they are so easily and completely digested.

If you're watching your budget, eggs mean unbeatable economy as the meal or in the meal. A main-dish serving costs only pennies, and eggs blend so well with all foods. Truly add appeal to any meal.

So be good to you and yours. Include extra eggs in your week. Enjoy them often, too, as you "eat out". You'll look better, feel better, work and play better. Eggs belong in your daily living!

## Poultry Profit Demands High Flock Efficiency

Efficiency of poultry production requires maximum return for effort expended with each flock, says Associate County Agent Harry S. Sloat. It means retaining for production only those layers which are performing profitably. It means marketing meat birds when they reach the maximum weight where they turn feed economically into food for human consumption. Sound management, then, makes best use of labor and equipment, and wisest use of feed ingredients and supplies.

Sloat suggests marketing those layers that have reached the end of their usefulness as egg producers. Delay may mean further expenditure of house room, labor and feed to recondition such fowls which may have molted or become too thin for marketing.

Pullets that are housed for egg production in 1957 should be carefully selected and graded on the basis of maturity, health and fleshing. House only the better pullets—the ones that have grown well and are equipped with a physique that can the rigors of sustained egg production. Cost of feed demands it be fed only to fowls that will make the best use of it. Probably 10 to 20 per cent of the pullet flock should never go into the laying house.

THIS IS A BLACK and white reproduction of the PENB advertisement to appear in color in the Saturday Evening Post March 23. The placing of such an advertisement breaks a precedent for PENB. The board heretofore has relied on public relations and publicity to promote the poultry and egg industry.
