

Transmissible Virus Causes Cattle Leukemia

Leukemia or Lymphocytoma in cattle may be caused by a transmissible virus, according to a report in the North American Veterinarian, a professional publication.

Veterinary authorities warn that the disease is hard to recognize in early stages because it causes symptoms similar to many more common diseases.

Frequent symptoms include general run down appearance, digestive disturbances, swollen abdomen, popping eyeballs followed by rupture and collapse of the organ, enlarged lymph glands, swollen muscles or genitals.

Progress of the disease varies and signs of infection depend on the organs or tissues which are af-

Milk Vending Machine Installation Started in State Capitol Buildings

Milk vending machines have begun arriving in Harrisburg for delivery to choice spots in the capitol group of buildings.

A Lancaster and Harrisburg milk distributor has entered into an agreement with Deputy Secretary of Property and Supplies Fred G. Klunk to place one-half pin vending machines in some 40 locations where state employees may have opportunity at all times to secure nature's most perfect

fect, veterinary authorities said.

Because the disease is transmissible, a veterinarian should be consulted and a blood count made to determine the disease causing the symptoms and permit proper treatment before the condition spreads to the rest of the herd.

food and beverage.

According to the agreement 8 per cent of the profits will go to the Pennsylvania Association for the Blind. The agreement, Klunk states, is in answer to Executive Directive No. 69, issued by Gov George M. Leader, directing that all state institutions be surveyed with the thought of having milk vending machines placed wherever other vending machines offer merchandise to state employees, students and guests of state colleges and institutions.

Reports of State Teachers Colleges indicate that many students are now patrons of these automatic merchandisers of milk where the proceeds are used to support students' activities funds. Other schools and colleges are scheduling contracts of a similar nature.

Greek Trade Mission Visiting U. S. To Learn About Wheat Availability

A Greek wheat trade mission is in the United States to learn more about the availability and quality of American wheat, according to the U S Department of Agriculture.

The mission was scheduled to arrive in New York Sunday and go directly to Omaha, Nebr, where it will begin a three-week study of the production, marketing and processing in the Hard Red Winter wheat-producing areas of Nebraska, Kansas, and Oklahoma.

The visit was arranged as part of the Department's continuing activity in promoting better foreign understanding of the qualities and type of United States farm products available for export. The Nebraska Wheat Commission is cooperating in the pro-

ject, assisted by the Wheat Growers Association in Kansas and Oklahoma.

The Greek wheat trade mission will make an extensive first-hand observation of wheat production, storage facilities, research laboratories, flour mills and bakeries. Mission members also confer with leaders in the grain and flour trades, and representatives of land-grant institutions. They later will confer with Department officials and grain and flour technologists in Washington.

The mission is composed of Panyotis Petropoulos, Panyotis annou of the Greek Ministry of Katsoulis, and Ippocrates Papaio-Commerce; and George Loulis, George Lianos, and Theodore Sarandopoulos of the Association of Flour Millers, Athens, Greece.

For every 1000 pullets you raise, save up to \$400

Follow the Ful-O-Pep Pullet Growing Plan

You can save as much as 40¢ per bird in feed cost on the famous Ful-O-Pep Pullet Growing Plan . . . yet grow big, husky, fully matured pullets that lay larger eggs right from the start. And pullets raised on Ful-O-Pep are likely to lay more eggs, too. Ask us about the Ful-O-Pep Pullet Growing Plan soon.
