

CHERRIES ARE RIPENING and harvest of the red fruit should be hitting its stride by the middle of next week. The State Department of Agriculture reports that yields are expected to be 50 per cent greater than last year. These cherries are in the orchards of Masonic Homes, Elizabethtown. (LF Photo)

Jamesway. SANI-KOOL BULK MILK COOLERS

LOWEST LINE IN THE INDUSTRY

Here's a great new line of coolers — direct expansion type — to meet every need. Seven models to choose from in self contained and remote control units. Many exclusive features.

- Low height . . . 32 inches . . . means easy effortless pouring.
- Fast cooling, low blend temperatures on subsequent milkings.
- Heavy, stainless steel inner and outer tank. Big radius round corners in inner tank. Recessed drain.
- Greaseless agitator motor. No drip or seepage. Dry gears.
- Remote control panel at eye height. Switches stay dry, even during wash-down of milk houses. Out of way of children.
- Made in 160 gallon to 500 gallon capacities.

See these new Jamesway Coolers before you buy. You'll be glad you did. They're designed right, built right . . . for years of service.

Free Plans For Shelter Available

PITTSBURGH, PA., June 28, 1957—Availability of free plans for a low-cost aluminum-roofed poultry shelter which can be moved from one location to another, was announced today by Aluminum Company of America.

Providing a space 12-feet long and 8-feet wide, the do-it-yourself poultry house is covered by a canopy roof of corrugated aluminum roofing sheet. It will accommodate from 60 to 90 fowl. The aluminum roof assures long life for the shelter with minimum maintenance the year around.

The shelter design provides for a base of two pressure-treated 4 by 4 wooden skids to facilitate its movement from one pasture area to another. A full, upright door allows easy access to the interior. Once inside, a 6-foot, 6-inch head clearance assures ample freedom of movement.

Under a blistering summer sun, the reflective Alcoa aluminum roofing has proven conclusively that it will reduce radiant heat, providing interior temperatures 15 degrees below that in shelters covered with other materials.

The self-supporting roof, made up of six lapping sheets of corrugated aluminum, is easily erected at nominal cost, and yet returns maximum performance. The sheets of Alcoa aluminum, 12 feet long and with a 1¼-inch corrugation, are placed on a flat surface and the ends nailed to the roof plates. The canopy is then simply folded over the shelter and the roof plates nailed to the sides—forming a natural and rigid curved roof that requires no additional support.

The aluminum roof, which repels heat during the summer, yet retains warmth through the winter, requires no painting and will not develop streaks of red rust to mar its original brightness.

Plans for this economical, portable shelter may be obtained by writing Aluminum Company of America, 1304 Alcoa Building, Pittsburgh 19, Pennsylvania.

Fire Safety Continuing Job On Modern Farm

LANCASTER — Fire, always a constant threat to the modern farmer, last year took 3,000 lives and destroyed \$152,000,000 worth of farm property.

County Agent Max M. Smith says combustible materials such as hay, straw and gasoline, plus heat-producing machinery, matches, smoking, sparks from motors, and lightning, all combine to increase the danger of fire on the farm.

Because of these dangers, Smith urges all farmers to take necessary safety precautions on all farm buildings, new as well as old. Precautions, he adds, are needed in all phases of the farm's operations.

He lists the following suggestions for greater protection.

Do each part of the daily work with the threat of fire in mind. Inspect the entire farm carefully for fire hazards.

Heat, sparks or flame, and combustibles such as hay, straw, gasoline or fuel oil, just don't mix. Keep plenty of space between them.

Keep first-aid and fire-fighting equipment available at all times. When fire strikes a farm, buildings are often completely destroyed because of comparative isolation from the local fire department, and from an adequate water supply.

A form of acute virus diarrhea of cattle resembles shipping fever and veterinary diagnosis is required to determine which disease is causing the illness.

May Milk, Egg Production Rises

Latest Crop Reporting Board figures show that milk production in May of this year reached a record high of 13,122 million pounds. This is two per cent above May of last year and six per cent above average for the month.

Production per cow also set a new record on June 1 of this year. The average in herds of crop reporters was 23.20 pounds, four per cent above last year's June 1 record and 12 per cent above average for that date.

For the first five months of 1957, milk production totaled 54.7 billion pounds compared with 54.3 billion for the same months of last year.

The rate of egg production in May is reported to be 19.2 eggs per layer, compared with 18.9 eggs last year and with an average of 18.2 eggs for the month. Farm flocks laid a total of 5,662 million eggs in May of this year, two per cent above May production in 1956.

Pleasant Valley Farm Elected to AGCC

PETERBOROUGH, N. H. — Samuel N. and Sara J. Myer of Pleasant Valley Farm in Elizabethtown have been elected to membership in the American Guernsey Cattle Club, non-profit agricultural organization serving over 40,000 purebred Guernsey breeders throughout the United States.

The Myers started with purebred Guernseys in 1954 and now own 40 head. The herd is doing DHIA testing. Milk is sold as Golden Guernsey by Mumpers Dairy.

The Myers are members of the Pennsylvania and Lancaster County Guernsey Breeders Associations.

Only ONE PIPELINE MILKER gives you these vital features...

✓ Insures uniform milking. Only the De Laval Combine gives you this essential uniformity because only De Laval has magnetic pulsation control.

✓ Insures gentle milking. No heavy tugging or jerking weight on the delicate udders.

✓ Insures perfect milking. De Laval made the first pipeline and the De Laval Combine has been perfected by more than a quarter century experience.

✓ Insures simple perfect washing. De Laval's In-Place washing system does a thorough job of sanitizing. Uses 23 less hot water and 90 per cent less detergent.

De Laval COMBINE — first since 1928.
