

Avoid Sagging Hem — A hang 48 hours before marking the hemline, suggests Miss Thelma Baier, Penn State clothing extension specialist. With this method the weight of the dress stretches the fabric before you make them.

FINE-SHRED
BLANKET-SPREAD

Nothing handles manure like a new Allis-Chalmers No. 110 Manure Spreader. Don't buy any spreader until you've seen for yourself how easy it loads — from the rear or sides, with no arches or beaters to block the way. See what a good job of shredding and even spreading it does.

Stop at our store, or call us, for full information on this new spreader.

'Sprayer-Duster' Shows Promise in USDA Tests

A versatile sprayer-duster, developed cooperatively in USDA and State research holds promise for use on several low-growing row crops.

Used successfully against aphids on potatoes during the past three years in Oregon and Washington, the sprayer-duster will be tried for applying insecticides to lettuce and broccoli. Other row crops to which the machine may be adapted include string and lima beans, egg plant, cabbage, cauliflower, collards, and strawberries.

Tests have demonstrated the flexibility of this machine for either spraying or dusting. It can be adjusted for use on low-growing crops of different row spacings. Treating booms may be moved horizontally and vertically within rows.

This permits spray nozzles and dust outlets mounted on the booms to be operated at a uniform height above the ground for accurate placement of insecticides on upper and under parts of plants.

Why the combination of sprayer and duster in one machine? For low-volume spraying, a supplemental air blast was needed to further atomize the liquid as it leaves the nozzle. What better source of air blast than a duster? Hence, the decision to build spray nozzles onto a duster.

The double-purpose unit lets farmers apply chemicals wet or dry, depending on what the situation calls for.

With currently used insecticides, the researchers got almost complete control of the aphids without significant mechanical damage to vines.

The unit can be powered by a row-crop tractor or other suitable vehicle. A horizontal tubular drawbar is attached to the vehicle at right

rected to treat the leaves and near the level in adjacent rows. High-velocity air streaming around the picks up the spray, and up to some extent, carries it through and over the plants. Another nozzle treats the sides of the same plant.

Consider Use in Comparisons — When prices, go beyond the price and consider the use of the item, advise Helen E. Bell, Penn State home management specialist. A beef roast a small portion of the cost more than a veal one, but may actually cost for two meals instead. And buying a larger quantity of fabric than you need an extravagance even if the price per yard is

One set of nozzles mounted within the dust outlets is directed to the direction of travel.

Sprayer-duster booms are attached to the drawbar by universal joint and rest their weight at the other end on skid-like shoes that trail along the ground midway between rows. Thus, atomizing spray nozzles and dust outlets on the booms are at a constant height and distance from the plants.

One set of nozzles mounted within the dust outlets is directed to the direction of travel.

Farm Bureau SYNCHRO-BALANCED PROFITMAKER FEEDS

geared to build profitable pullets

SYNCHRO-BALANCED adds to your profit two ways...

1. Trims feed costs
2. Builds strong, productive layers

Farm Bureau Profitmaker Feeds are SYNCHRO-BALANCED to provide your pullets with the exact combination of proteins and calories they need.

SYNCHRO-BALANCED cuts your feed costs, raising replacements, builds strong frames, increased capacity, sustained, profitable production
