peaches, cut-up slow oven (300 degrees) for 30 minutes before serving.

cherries; a mix cream and the 5½ cup sugar.

g flavor through- es, after apply- dents with the op of the cakes, ost to the bot- an. Let rise only d for fine tex-

coffee cake af- if desired. To de- wrapped cake in

2 eggs (room temperature) ½ cup soft shortening

Add the yeast to the warm water. Let stand. Pour scalded milk over sugar, salt, & spices in large bowl. Stir until dissolved and slightly cooled.

Add half the sifted flour and beat until smooth. Beat in eggs and yeast-mixture. Blend in the shortening with the remaining flour. Beat until smooth.

Batter-Drop Doughnuts

2 packages active dry yeast
½ cup warm water (110-115 degrees)
¾ cup milk, scalded
¼ cup sugar
1 teaspoon salt
½ teaspoon mace
½ teaspoon nutmeg
¾ cups sifted all-purpose flour

Scrape down batter from sides of bowl. Cover and let rise in warm place until doubled, about 30 minutes. Stir down and let rest while fat is heating to 350-375 degrees (to test, a one-inch cube of bread browns in 60 seconds).

Drop batter from teaspoon into hot fat. Turn when edges show color. Frying until golden brown—about 1½ minutes on each side.

Batter-Whole-Wheat Bread and Rolls

2½ cups warm water (110-115 degrees)
2 packages active dry yeast
2 cups unsifted whole wheat flour
4 cups sifted all-purpose flour
4 tablespoons honey or brown sugar
¼ cup soft shortening
4 teaspoons salt

Pour the warm water into a mixing bowl and add the yeast. Let stand a few minutes. Stir to dissolve. Add about half the dry ingredients which have been mixed together, the shortening, and

the honey.

Start the mixer on medium speed, or beat by hand. Beat two minutes or until smooth. Beating in this recipe takes the place of kneading. Stop the mixer. Add the rest of the dry ingredients. Blend in with spoon until batter is smooth again, 1 to 1½ minutes.

Scrape down batter from sides of bowl. Cover bowl

with waxed paper. Let rise in warm place until doubled—about 30 minutes. Meanwhile, grease two 4½x8½x2¾ inch, two 9x5x3-inch bread loaf pans, or 24 large muffin cups.

Stir down batter by beating 20 to 25 strokes. This is a thick, somewhat sticky batter. Put into the pans. Batter will fill loaf pans or muffin

Contaminated Water Can Effect Your Farm Income

Lancaster, Pa. — Disinfecting water is of utmost importance because the removal of disease producing organisms from water is a prime prerequisite for its safe use.

And chlorination offers the most dependable method of disinfecting water, says the Joint Committee on Rural Sanitation, U. S. Dept. of Health, Education and Welfare.

It is feared that typhoid fever may stage a comeback in the U. S. and that amoebic dysentery, cholera, hookworm and infectious hepatitis, a disease of the liver, threatening human users of untreated well water; while livestock are imperiled by tuberculosis, hog cholera, anthrax, glanders and stomach and intestinal worms.

Crops irrigated by water containing sewage pollution may transmit disease. Waters carrying industrial pollution such as chemical wastes, can damage the crops they irrigate, says U.

S. Dept. of Health. The increase in use of supplemental irrigation in the East has raised questions of quality of water. Many natural streams formerly relied on to provide water for livestock have become so polluted that their continued use is unsafe.

Water can be sparkling, clear to the eye, and taste good, yet swarm with these deadly bacteria, nor is merely a deep well the answer.

Only the proper use of chlorination and dechlorination device according to Cliff Lehman, can provide constant and continuous protection against the menace of water borne diseases.

We will be glad to discuss any water problems you may have at Dairy Day next Wednesday.

For advice about water analysis, contact Cliff Lehman, Water Conditioning Consultant at Century Co., 15 W. Chestnut St., Lancaster, Pa. Phone EX 4-9365.
