

# Control Sprays Milk Production

Little are bothered with methoxychlor or dairy species of flies animals producing milk. Mosquitoes Chester Methoxychlor applied dry is safe to use and gives effective control of horn flies and mosquitoes. Robert A. Powers warns these often reduce production in dairy control, Powers 50 per cent pyrethrin or three to five per cent organic thiocyanate are also widely used on the dairy cattle. Many commercial fly sprays also contain an insect repellent which increases its effectiveness. These formulations are commonly used as mist sprays at the rate of

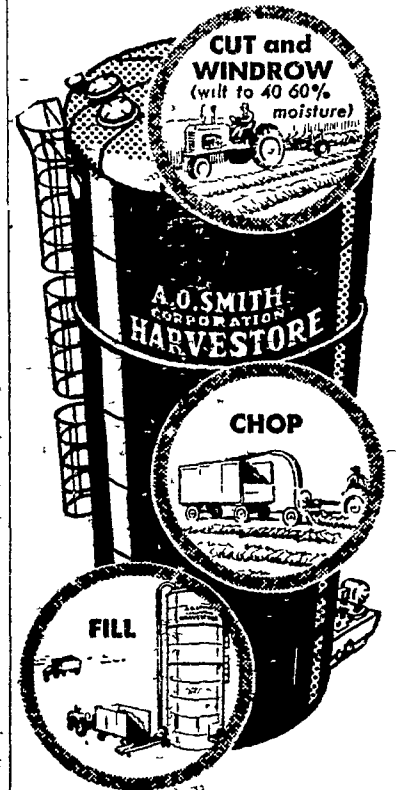

one to two ounces per animal in daily applications.

Aerosols and space sprays will also give satisfactory control of flies when properly used. Aerosols, containing at least 0.5 per cent pyrethrin plus five per cent synergist, are most satisfactory for killing flies. Spray concentrates containing one per cent pyrethrin and ten per cent synergist can also be used for both space spray and on animals. Such concentrate is usually diluted 1 to 19 with water for use in compressed air sprayers, and one to nine for use in small electric fog generators.

**WHY MAKE HAY?**

When HARVESTORE® HAYLAGE (the near-perfect forage feed) is yours in 3 Simple Steps

See us for details on High-Profit Haylage.

**DAIRY BUILDING WALLS OF GLAZED FACED BLOCK ARE HARD, STRONG AND NEVER NEED PAINTING**

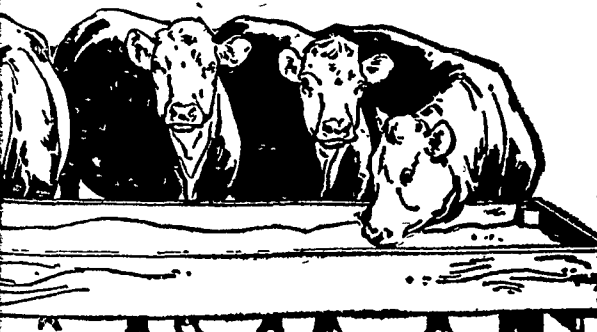

The ideal building material for milking parlors and barns — glazed faced concrete blocks. You get a finished wall with a hard, smooth inside surface that never needs painting and a sturdy concrete block in one block laying operation.

You can eliminate all the expensive maintenance, trouble required to keep your dairy barn walls clean. With glazed face block, you simply wash the walls and forget them. The hard, smooth, permanent — will last as long as the building itself! Progressive dairymen have already constructed barns using glazed faced block.

Send you, free of charge, information on how you can benefit from dairy buildings built with glazed faced

## OLIVER 60-T and 60-W Twine-Tie and Wire-Tie BALERS

All-Around Tonnage Champs  
with "Pivot-Balanced" Drive

Match a new Oliver—twine-tie or wire-tie—with any other machine in your small, rough, patch-pattern fields. There's where it gobbles up the windrows, bales up to ten tons per hour as easily as on the straightaway.

You get Oliver's exclusive "pivot-balanced" drive...and exceptionally short coupling. Just follow the windrow with the rear tractor wheel—even around the sharpest corner. Your Oliver gets the hay... saves hours of time when time counts most.

Here are balers with everything: new, leaf-saving pickup...swinging drawbar for safe transport...overrunning clutch (extra)...protective devices for all important units. You can adjust bale length in seconds—from 12 to 50 inches. Twine- and wire-tying units are easy to interchange, and an engine (extra) is easy to mount when desired.
