FRIDAY TREND—Market position continued closely cleared and fully steady to firm. Somewhat heavier receipts generally expected next week.

Copyrighted 1958 By Urner-Barry Co.

Potato and Tomato Growers—
Du Pont MANZATE® gives
powerful disease protection...
helps produce higher yields,
more No. 1's

FOR POTATOES—"Manzate" gives outstanding control of blights... it's the "new standard of excellence"

In grower tests, "Manzate" has boosted yields of No. 1's an average of 21.4 hundredweights per acre over standard fungicide programs. Right in your own state, "Manzate" led all other fungicides tested. In fact, in these tests, "Manzate" stood out best because it consistently resulted in high yields. Last year, potato fields treated with "Manzate" stayed blight-free, although surrounded by infected areas in many instances.

FOR TOMATOES—"Manzate" is the most nearly perfect fungicide yet developed

Don't risk the severe disease damage that so many tomato growers suffered during 1958. Use "Manzate" for positive control of all major fungus diseases of tomatoes. "Manzate" controls defoliation and fruit rots with maximum efficiency, yet is mild on plants. And canning-house records show that spraying "Manzate" increased tomato yields an average of 75 per cent over untreated fields.

Remember these advantages from "MANZATE"...

- Outstanding Disease Control.
- Thoroughly Tested, Recommended.
- Flexible Spray Programs, "tailor-made" for your area and conditions.
- Easy to Use—No mixing or handling problems.
- Economical—The most disease control for your money.

For the most effective disease control, be sure you get Du Pont "Manzate" maneb fungicide. Order a supply of "Manzate" from your dealer now!

On all chemicals, always follow label instructions and warnings carefully.
