WHAT POTATO GROWERS SAY

about controlling blight with

DITHANE M-22

30 barrels more per acre."

I used DITHANE M-22 on about 10 acres of potatoes during 1958 with very satisfactory results. During August, about 9 inches of rain fell, and late blight became a serious threat to Aroostook County potato growers. We feel that DITHANE M-22 passed the test by giving us better blight control than we had with the nabam fungicide for the balance of the crop. In addition to the excellent disease control, we had an increase in yield amounting to 30 barrels per acre.

J. Lausier, KVL FARMS, PRESQUE ISLE, MAINE

"... exceptional control of late blight."

I used DITHANE M-22 on my entire crop of certified seed potatoes during the 1958 season and I feel that the performance of the product was outstanding. During the month of August, we had an excessive amount of rain in Aroostook County and late blight rapidly developed in the area. Despite these severe disease conditions, DITHANE M-22 prevented any late blight development in my crop. Under the circumstances, I feel that DITHANE M-22 gave me exceptional control of late blight.

Athell Banks, MARS HILL, MAINE

"... prefer working with DITHANE M-22."

DITHANE M-22 helped us grow a good clean crop of potatoes last season. Weather conditions during 1958 were very favorable for blight and it was present in the area, but DITHANE M-22 kept our vines healthy until harvest. We would also prefer to work with DITHANE M-22 to other materials. It is convenient to handle and ready.

Rohm & Haas, R. D. #1, BATH, PA.

"... biggest crop I ever produced."

I used DITHANE M-22 on my potato crop exclusively during 1958 and harvested the biggest and best quality crop I ever produced. The crop was clean and free of blight in spite of favorable disease weather experienced during the growing season. I find its ease of handling and mixing a real advantage and certainly plan to use it again next season.

Ernest R. Ringer, R. D. #1, ALLENTOWN, PA.
