Big Wheat Growers Must Comply To Receive Supports

The USDA has announced that any wheat producer who desires price support payments in excess of \$50,000 must reduce his total wheat acreage 20 per cent below his 1959 acreage and other wise be in compliance with price support regulations.

This action was taken under a provision of the 1960 Agr. Appropriation Act. Large growers of other fall-seeded crops in probable surplus, were warned that a similar production cut may be required of them if they wish to avoid the price support limitation.

The crops that may be affected are barley, oats, rye, sorghums and flaxseed.

PRINCIPAL FACTORS

- IN -

Economical Milk Production

Good Roughage — This is the greatest single factor in economical milk production.

Roughage of proper quality meets 75% of the total requirements for maintenance and milk production.

Note: This emphasizes the need for Dairymen to concentrate their efforts on production of good roughage.

Feed the individual cow to meet her requirements — Do not feed the herd as a unit.

For instance: A cow producing 35 lbs. of milk needs less 16% dairy feed than a 50 lb. producer.

If the herd is fed uniformly rather than on an individual basis the low producing animal will get too much feed and waste it, or the high producers will not eat enough to properly sustain production.

A practical program of weighing milk and feed is required to establish the proper quantity of feed for each individual cow.

Miller & Bushong's Green Pastures Dairy Feed

Complete { now available in economical
 14% or 16% } labor saving bulk

and 32% Concentrate in bags to be mixed with your grain. Will meet all of your herds requirements for

- MAINTENANCE
- MILK PRODUCTION
- GROWTH and REPRODUCTION
