 late July dry conditions. A
 few producers predict dig-
 ging will start about August
 20.
 Yield of the fall crop is
 estimated to be 170 cwt. per
 acre. This should produce a
 crop of 7,157,000 cwt. from
 the 42,100 acres for harvest

Care Now; Save \$ Later

Associate Chester County Agent Joseph H. Way urges all farmers to protect animals from injuries. How? He offers these few pointers:

Repair or remodel high door sills, short stalls with deep gutters, and low, loose fences that may tempt cattle to climb them. Many udder and teat injuries are caused in this way.

Dehorn cattle to keep them from injuring each other.

Ground wire fences every 200 feet to keep animals from being electrocuted while they are on pasture during summer electrical storms.

Check buildings and pens for protruding nails. They can puncture animal's skin and let disease germs in.

Don't leave machinery in pastures and lots.

Pick up old plowshares and points, cultivator shovels and broken parts of machinery, and sell them You

will get some spare cash and at the same time animals will be saved from possible injury.

Clean up after repair jobs. Small nails, bit of wire and other objects left lying around the pasture, lots or barnyard can easily be mixed with feed or picked up while grazing.

Once inside the animal, they can puncture its internal organs and cause painful injuries or even death.

Call the veterinarian if any cattle are off feed, breathe fast, and stand with arched backs and have a "tucked-up" appearance. They may have swallowed some metal object that penetrated into the heart region.

U.S. Commercial Feed Output Up

Chicago, Ill.—Livestock & poultry feed output of companies reporting to American Feed Manufacturers Association increased five per cent during the first six months of 1959, compared to the same period a year ago.

These firms account for nearly half of the total industry output.

Manufactured feed totaled approximately 20.8 million tons in the period January through June, 1959. It appears that total 1959 feed tonnage may rise above the 1958 record of 40 million tons. If so, it would be the ninth time in the last eleven years that annual commercial feed production exceeded the level of the preceding year.

Hog, beef and sheep feed had the largest increases, according to AFMA. Beef and sheep feed was up 20 per cent and hog feed production was up 18 per cent from a year ago.

Broiler and turkey feeds were both up three per cent while other types of poultry feed increased two per cent. The only decline was noted in dairy feed which dropped one per cent below year ago levels.

The sections of the country with largest total feed increases were mostly in the range area and provided increases of 18 per cent.

This included the states of Oklahoma, Texas, Arkansas, Colorado, New Mexico, Utah, Arizona, Nevada, Montana, Wyoming and Idaho.

Other areas of the country showed increases of from one to 13 per cent, with the exception of New England, New York, New Jersey, Kentucky, Pennsylvania, West Virginia, Virginia, Maryland and Delaware, where decreases of from one to three per cent were noticed.

NEW WIDER BITE FT GRASS HEADER

Chops 25% Faster

The new Model 50 Allis-Chalmers forage harvester steps up the width of cut by 25 percent so you can chop grass or hay one-fourth faster.

For row crops, the new Model 50 has a unique kind of loop-type distributor to feed corn, sorghums, etc., butt first across the entire width of the 36-inch cylinder.

Let us show you the many time-proven advantages of the Allis-Chalmers forage harvester, now improved better than ever. Call for a demonstration.

MORE PROOF...it pays to feed PURINA

Guy Tanger, York Springs, Pennsylvania

Purina-fed Adams County herd produces 300,000 lbs. milk per man!

Milk per man is a modern and realistic index of dairy profits, and Guy Tanger of York Springs, Pennsylvania, has built his per-man production to 300,000 lbs. milk... by increasing milk per cow!

Responding to Purina's new high-efficiency milking ration. Cow Chew "D," Mr. Tanger's 30 milkers have shown steady increases in per-cow production... moved to new highs last year. Home-raised replacements, fed the Purina Way as calves and heifers, are joining the milking string as early-freshening 2-year-olds that produce like grown cows... boosting the herd average and holding real promise for further growth in years ahead.

We can help you plan a sound feeding and management program, backed by Purina Research, for your herd. Call or visit us for details.

TOTAL PRODUCTION of

vegetables for processing doubled in the years between 1935-38 and 1955-58, according to the USDA. Acreage was up only 20 per cent, but yields increased almost 70 per cent.

Although all regions except the South Atlantic showed some gain in acreage, 90 per cent of the total increase resulted from a doubling of acreage in the Western Region.

The West also showed the highest average yield per acre, and experienced the sharpest increase in yield.

VanDale AUTOMATIC FEEDING

Fingertip silage feeding, from silo to feedlot, without ladder, bent back or pitchfork.

SAVE time and work by unloading, mixing and delivering silage in one push-button operation. Step up milk and beef production by installing a VanDale Combination Silo Unloader and Automatic Bunk Feeder. Handles any silage, packed or frozen—even grass—delivering it in more palatable form with greater feed value and less spoilage. VanDale Silo Unloaders are available in the Heavy Duty Model, with or without a Booster Unit. VanDale Bunk Feeders fit any shape bunk. Both are completely portable.
