MINNESOTA EXP. Station researchers have advanced a new concept in pole-frame farm buildings. The concept involves a wall built by nailing treated two-inch tongue-and groove planks to the inside of the poles.

special members are needed to support the roof, and no nailing of girts or other framing is needed; (2) eliminates need for double construction near the ground level, and (3) completely smooth interior. Prospects include use as machine sheds, loafing sheds, farrowing houses and feeding buildings.

Advantages of this method include: (1) less construction time and work, since no
