

TYPICAL—Here's what you find at the main panel in many homes. If you have an obsolete "main," similar to the one at the left, you have enough "housepower" only for lights and a few small plug-in appliances. A minimum installation (center) will permit the addition of a couple major, 240-volt appliances, such as an electric range and a water heater—but that's all. A "main" like the one at the right will take care of almost any usual combination of electrical appliances, with the exception of central air conditioning and electric house heating.

Local Entries In Stock Show Are Announced

Pennsylvania Livestock Exposition officials today announced that local livestock breeders will show animals in the November 9 through 13 event in the Pennsylvania Farm Show Buildings, Harrisburg, Pa.

Exhibiting in the junior steer division are:

Fred Bernhard, Mount Joy one Angus; Warren Groff, Mt. Joy R1, one Hereford; Mary Jane Herr, Refton, one Angus and one Hereford; Edwin Espenshade, one Hereford; and Betty Jane Hess, one Angus; both of Elizabethtown R2.

Gary Kreiner, Elizabethtown R3, one Angus, John Frey, one Angus; Magda Frey, one Angus; and Maria Frey, one Angus; all of Quarryville R2.

John Henry Hess, Jr., one Angus and two Hereford; James Douglas Hess, one Angus and one Hereford, both of Manheim R1; Wilbur Hos-

ler, Manheim R3; one Angus Eugene Hosler, Manheim R3, will have one exhibit in the market wether division.

This is the third such open livestock show to be held in Harrisburg With beef cattle, swine and sheep being exhibited, it has become one of the major livestock events in the eastern United States. The sheep show is the largest indoor show in the nation.

Ben Morgan, show manager, estimates that more than 3,000 head of livestock will be shown.

Carcass classes — classes where market pigs, steers & lambs are judged on foot and then slaughtered and the carcass judged for quality—are being emphasized in the "Keystone International." In this type of competition, not only the animals are judged, but also the ability of a judge to place a live animal on the basis of its meat producing ability.

No admission is charged for attendance at the Pennsylvania Livestock Exposition which is held indoors in

Milk Pricing Hearings Set

The U. S. Department of Agriculture announced the scheduling of public hearings in Boston and Philadelphia to consider amending the minimum producer prices set for Class I (fluid) milk under several northeastern Federal milk marketing orders.

The Boston hearing, set to begin on Oct. 19 at the Hotel Essex, will be concerned

the 14-acre Pennsylvania Farm Show Building. The show is sponsored by the State Farm Show Commission in cooperation with the Pennsylvania Livestock and Allied Industries Assn., Inc., and the Pennsylvania Dept. of Agriculture.

To be held in conjunction with the "Keystone International" is world championship rodeo with a purse expected to top \$15,000.

with minimum Class I milk prices fixed under Federal marketing orders for the Greater Boston, Springfield, and Worcester, Mass., and the Southeastern New England and Connecticut marketing areas. The hearing in Philadelphia, scheduled for 9:30 a.m. on October 22 at the Sylvania Hotel, will be concerned with Class I prices for the Philadelphia and Wilmington (Del.) marketing areas.

Both of these hearings will afford opportunity for presentation of evidence on Class I prices established under the several marketing orders, particularly as to each other and to Class I prices in other markets and in relation to the value of milk for manufacturing uses. Proposed specific changes in the Class I price formula for Philadelphia and Wilmington also are scheduled.

The need for reviewing the Class I milk pricing provisions for other markets in the northeast was recognized, the Department said, at the time (May 1, 1959) of its recommended decision to amend the marketing order for the New York-New Jersey area to fix maximum margins by which the Class I price could exceed the level of midwestern condensery prices.

However, after the issuance of this recommended decision, producer organizations in the New York-New Jersey and other northeastern markets requested additional time for further study and presentation of proposals. Accordingly, the Department extended indefinitely the time for filing exceptions to the New York-New Jersey recommended decision and fixed Sept. 15 for filing additional or alternative proposals for further review of Class I prices in all north-

Hybrid Corn Strains Tested

Researchers at Pennsylvania's Agricultural Experiment Station are looking for "break-through" in more rapid development of improved hybrid corn. They hope to determine how corn plants build up resistance to borers a serious pest.

Something in the chemical make-up of resistant corn plants kills borers. If borers resistance can be determined in a laboratory breeding for resistance will be speeded up by doing testing procedures in the laboratory. Discovery of these factors also should help develop hybrids resistant to the corn leaf aphid another serious pest.

Penn State's researcher corn diseases, Dr. Clifford Wernham, says he is combining some exceptionally strong root stocks from South America with U S hybrids to develop resistance to stem rot and blight. Crossing tropical corn with U S corn produces "tremendous root systems," Dr. Wernham stated.

SLEEK, STRONG-BONED

on New FORMula Wayne Calf Starter

Here's an ideal creep feed! New FORM—new FORMULA! Special new texture and formulation gets calves on dry feed early. Fortified with an antibiotic, vitamins, minerals and proteins, new FORMula Wayne Calf Starter grows sleek, bright-eyed, strong-boned calves.

New FORMula Wayne Calf Starter

- Coarse, Uniform Texture Calves Like
- 10.6% Faster Gain—14% Less Feed*
- No Growth Lag After Weaning
- Antibiotic Fortification Helps Prevent Scours
- Tastier—Gets Calves On Dry Feed Earlier

*In Research Farm tests compared to previous feeds.

With Allis-Chalmers D-Series Tractors, Power Director teams with TRACTION BOOSTER system to create 42% more pull for your heavy work. The 4,100-lb. D-14 equals a 6,400-lb. tractor in pull; the 5,300-lb. D-17 equals a 7,500-lb. tractor in pull.

On the average, however, you will use your tractor for heavy work only 17% of the time. For the 83% of the time you are not doing heavy work, a D-Series Tractor will save you as much as 16% in fuel costs. D-Series Tractors use Power Director and TRACTION BOOSTER system to get more pull when needed . . . instead of carrying around excess, built-in weight. Let us show you.

TRACTION BOOSTER is an Allis-Chalmers trademark.
