Legal Notices

TO JOHN W. McKINNON, and his heirs, legal representatives and assigns, generally.

You and each of you are hereby notified that on November 6, 1959, Leo G. Smith filed a complaint in an action to quiet title against you as defendants in the Court of Common Pleas of Lancaster County, Pa., and to which complaint you are required to answer, setting forth the following: John W. McKinnon; by virtue of an assignment dated June 19, 1907 from the Pennsylvania State Building & Loan Association become the owner of a mortgage against premises in Conestoga Township, Lancaster County, Pa., and which premises are more fully described in said complaint; that said mortgage, recorded in the Recorder's Office at Lancaster, Pa. in Mortgage Book 94, Page 197, was given by Edward Peaco to said Pennsylvania State Building & Loan Association, and assigned as aforesaid to John W. McKinnon, said assignment being recorded in said Recorder's Office in Mortgage Book 118, Page 266; that no payments on account of or acknowledgment of said mortgage indebtedness, have been made and no action to enforce the same have been brought since January 1, 1908, and that a presumption of payment of said mortgage has arisen because of the lapse of 21 years.

You and each of you are hereby notified that on January 15, 1960, at 9:30 A. M., plaintiff will ask the Court of Common Pleas of Lancaster County, Pa., at the Court House in Lancaster, Pa., to determine that said mortgage has been paid in full because of said presumption, and to order the Recorder of Deeds of Lancaster County, Pa., to satisfy said mortgage of record.

Topping Corn Is Of No Value Research Shows

Although topping corn plants before harvest is widely practiced in some areas of the Corn Belt, and by a few Pennsylvania farmers, U. S. Department of Agriculture research indicates that the practice may be of little or no value.

Topping removes some of the leaves and the tassels above the ears. The practice is supposed to hasten the drying of corn ears in the field and improve mechanical picking reducing stalk lodging and the amount of rough material run through the pickers.

No beneficial effects were obtained in experiments conducted last fall at USDA's Agricultural Research Service, near Ames, Iowa.

For purposes of the experiment, the topping machine was set to cut the stalks just above the tips of the highest ears in the row. This setting cut about three feet off the tops of the plants, which is equivalent to taking the tassels and the first four or five leaves.

Corn topped 10 days after pollination gave a yield of 100 bushels per acre, 23 days after pollination gave 106 bushels; 42 days, 108 bushels and 59 days, 105 bushels. Plots that were not topped gave a yield of 112 bushels per acre.

Although the topping trials showed little change in field drying rates, shelling percentages, test weights, yields, lodging, pre-harvest losses, or harvest losses, the scientists said results were affected by weather conditions and research will be continued in order to test the practice under a variety of weather conditions.

You and each of you are hereby notified that on December 28, 1959 at 9:30 a.m., plaintiffs will ask the Court of Common Pleas of Lancaster County, Pennsylvania, at the Court House in Lancaster, Pennsylvania, to order that you be forever barred from asserting any right, lien, title or interest in said real estate inconsistent with the claim of plaintiffs to a full and sole fee simple title to the same unless you file an answer to said complaint, within, or appear in Court at said time, or take such action as the Court may direct within 30 days thereafter.
