knife. Sprinkle a topping over coffee cake batter. Bake in preheated oven (375 degrees) about 25 minutes. Makes 8 servings.

**COLD WATER DETERGENT
WORKS BETTER ON
DACRON**

Cold water detergents seem to be more suitable for use in laundering Dacron than wool. Effects of six cold water detergents on Dacron and wool were compared in recent tests. Dacron showed

less change than wool through six launderings.

More shrinking and matting was evident on wool. Dacron did not wrinkle or stretch as it often does when hot water laundry methods are used. The tests ranked the effects of the detergents on the whiteness and softness of both fibers as well as for shrinking, matting or stretching.

White scarves of 100 per cent wool and 100 per cent Dacron were used for the tests. The scarves were worn for two day periods by six

different people. They were rotated from person to person after each laundering.

Each scarf was laundered in 68 degree tap water—soaked, rinsed, rolled in a towel and fan dried. The same detergent in amounts specified in the directions was used on the same scarf through the six launderings. After each laundering the scarves were measured for shrinkage. Ten judges scored them at the end

of the experiment for loss. Today's farm population is 21.2 million in the United States compared with 15.3 million in 1950 and 11.3 million in 1940. Since 1950, the farm population has decreased by 3.9 million, or 25 per cent.
