

**● Bomb Shelters**

(From Page 1)

cans could survive an all out nuclear attack if proper shelters are constructed and used, but without the aid of proper shelters, perhaps only a few hundred thousands could survive.

The Millersville meeting, the first of its kind in the county, paved the way, Meyers said, to similar meetings with other agricultural groups. Any group interested in such a meeting is urged to contact Sheriff Meyers, the Civil Defense Headquarters in the Lancaster public safety building or Howard Siglin, Millersville.

**● Cutworms**

(From page 1)

On alfalfa, if the spray was not applied immediately after harvest, wait until the alfalfa is four to six inches high, then apply 1½ quarts of 25% Methoxychlor emulsion using 40 to 100 gallons of water per acre. If aphids are also a problem, Sloat recommends using 1½ pints or four pounds of Malathion 25% wettable powder. This application should control weevil and leaf-hopper as well.

In addition to the insect pests, disease has been causing some problems. Late blight on potatoes was reported in the county this week. The moist conditions and cool nights have been favorable for the development and spread of this disease.

Sloat recommends the use of one of three fungicides along with the regular insecticide spray on potatoes. Maneb 80% wettable powder at the rate of three pounds per acre, or Nabam 19% liquid at four quarts per acre or fixed copper 50% wettable powder at the rate of eight pounds per acre should give good control.

To control early blight, which has been observed on tomatoes in the county, as well as pink aphid, green pea aphid, flea beetle and Colorado potato beetle larvae, Sloat recommends the use of a combination of Malathion, Methoxychlor and

Maneb.

The rate of application on tomatoes should be one pint of the 59% emulsion of Malathion plus two pounds of Methoxychlor 50% wettable powder plus three pounds of Maneb 80% wettable powder.

In home gardens Malathion ONLY should be used with the fungicide.

"Do not contaminate streams ponds or water supplies with spray material and always follow the manufacturers' directions." cautions Sloat.

**● Wheat Varieties**

(From page 1)

than Pennoll and slightly earlier than Seneca and Dual. Resistant to powdery mildew, leaf rust and stem rust Hessian fly resistant which permits early fall seeding for fall pasture as well as grain. More winter hardy than Pennoll or Seneca and equal to Dual. Developed by the Purdue University (Indiana) Agricultural Experiment Station and the United States Department of Agriculture.

Pennoll — High-yielding; heavy bushel weight; large soft red kernels; beardless, white chaff; yellow, stiff, tall straw. Matures 3 to 5 days later than other recommended varieties. Cross between Valprise and Nittany (Pennsylvania 44). Pennsylvania variety developed by the late Dr. C. F. Noll, named and released in 1951.

Seneca — High-yielding; good bushel weight; soft red kernels; beardless; brown chaff; purple, very stiff, medium-height straw. Similar to Thorne in appearance and breeding, but higher-yielding and better in bushel weight Selection from the same cross as Thorne (cross between Portage and Fulcaster). Ohio variety released in 1950.

Dual — High-yielding; one to two pounds lower bushel weight than Seneca or Pennoll; small, soft red kernels; beardless; white chaff; fairly stiff, medium height straw. Leaf rust-resistant. Hessian fly-resistant which permits early fall seeding for production of fall pasture as well as grain the following summer. Somewhat more winter-hardy than Pennoll or Seneca. Plant seed free from loose smut. Distribution by the Purdue University (Indiana) Agricultural Experiment Station in 1955.

**CHECK WAISTLINE**

Before buying children's clothes, check the waistline, suggests Thelma Baierl, Penn State extension clothing specialist. The waistline should be a little loose and longer than normal to allow for growth. Garments with partially elasticized waists are good buys. The elastic allows fullness to adjust to the growing body.

**BURLING'S CHICKS For Top Quality Eggs**

Last fall, at NEPPCO, our egg quality was highest among all entries. These were hen eggs—after they had been laying 12 to 14 months. That's when Quality Eggs pay best.

At Bill Burling's you can find just what you want.

You have eight top strains and crosses to choose from. Our Sexlinks are very popular with nearby farmers.

Then there are the "pick" of the best strains and crosses for Broilers, or meat-and-eggs.

One customer said our Carey Leghorns are: "Just wonderful birds to handle". That's important in high-powered Leghorns.

**Burling's Big 8**

Carey's Famous Random Sample Test-winning Leghorns. A customer made a 270-egg average on 1800 birds!

Ready - to - Lay Pullets Available At ALL Times

**BURLING'S HATCHERY**

Box F

Oxford, Penna

Merryknoll Sexlink (Red x Red)—Bred by electronic "brain" methods.

Golden Sexlinks — Hatched male x Andrews White Rock female. They're tough, and great layers.

Cobb's White Rocks — Broiler Test winners and good layers too.

Vantress x Cobb White Rocks — Popular for meat

Garrison Cornish Male x Cobb White Rock female. Super meat quality.

Gove's Barred Rocks — a favorite of many farmers

Burling's New Hampshire Carefully selected stock
