...to kindle charcoal. Safest way to kindle charcoal is to use dry, crumpled paper, or a light substance like excelsior, under the pile of charcoal. Then simply lite the paper as in starting an ordinary wood fire. It may take a little fanning to get the charcoal kindled. When you see grey or whitish spots around the edge of charcoal, this means that it is kindled. In 20 minutes or so it will be hot enough to grill. The charcoal chef — and others who join in the cooking — should wear heavy, fire-proofed gloves both in building the fire and using it. A fireproof or fire-resistant apron is a safeguard, too. It would be well to have on hand a sprinkling can full of water — one with a long spout preferred — to douse the fire in an emergency or

when leaving the picnic site. Cooking will be done more conveniently with long-handled forks, tongs, skewers, skillets and saucepans. It is easier, too, if you have long-handled swabs or brushes for barbecue sauce.

Dairy Program
(From page 1)

completion of the cattle judging contest on the farm of Clarence Keener, Manheim R1, recommended a program of strict culling to upgrade the cows in the herd, and the purchase of outstanding brood cows for mating with proven sires to build the future herd. Great Brooks Farm last year had an average production per cow of just under 600 pounds of butterfat, but perhaps of more interest to Holstein breeders locally is that the farm was the breeder of two bulls currently in

the stud at Southern Pennsylvania Breeders Cooperative. Wimarjo Pabst Regal Lucifer, known as SH-49, Regal, and Langdonhurst Ormsby Burke Lad, SH-53, Lad, purchased from Farnham Smith of the Great Brooks Farm, are both rated Gold Medal sires by their breed associations.

Meanwhile Elam Bollinger of Manheim R1 was racking up a score of 146.7 of a possible 150 points to capture the men's division and the grandchampionship in the dairy cattle judging. The ladies were well represented in the contest when Mrs. Richard Hess, Strasburg R1, piled up 144.7 to take the women's division honors and reserve championship in the placing Gerald Kreider of Quarryville R1, saw the cows enough like official judge Howard Weiss of Lebanon saw them to amass a total

of 135.4 and capture the youth division title. Bollinger in winning the men's division, received a model Holstein cow. For his championship award he was presented a rotating trophy from J. W. Eshelman, Inc. and a permanent trophy from Wirthmore Feeds, Inc. A silver cream and sugar set was presented to Mrs. Hess for her win in her division and a trophy for her reserve championship was presented by Wolgemuth Brothers, Inc.

Other winners in order of their placing and the award they received were as follows. Men: 2, Nelson Kreider, Manheim R1, cow halter; 3, Donald Trimble, Quarryville R1, pipe wrench; 4, Isaac K. Eby, Ephrata R3; 5, Albert R. Frey, Manheim R2. Women: 2, Mrs. Carl L. Martin, Ephrata R1, cream

pitcher; 3, Mrs. H. Leroy Welk, Strasburg, butter dish; 4, Mrs. Kenneth Skiles, Narvon R1; 5, Geraldine Hershey, Manheim R1. Youth: 1, Gerald Kreider, Quarryville R1, model cow; 2, Donald Bollinger, Manheim R1, cow halter; 3, Paul H. Martin, Ephrata R1, cow halter; 4, Clarence Bauman, Lancaster R7; 5, Sterling Elmer, Lancaster R6.

S.P.A.B.C. Show
(From page 1)

calf class, will have over 40 contenders. The largest Guernsey class the show has ever seen will feature 21 two year olds. Entries break down as follows: Holstein - 170, Guernsey - 84, Jersey - 65, Ayrshire - 58, and Brown Swiss - 23. Total entries in the show last year was 333 head.

A BAKER'S DOZEN*
BAKED THIS CAKE

Talk about co-operation—the moment you set the oven control, not one! not two! not three! but a baker's dozen electric companies go to work for you. PP&L is one of thirteen power companies whose service facilities are interconnected to provide a giant electric power pool serving in Pennsylvania, New Jersey, Maryland, Delaware and Washington, D. C. This huge network of interconnecting lines assures adequate electric power to eighteen million people. One of the first power grids in the country, this interconnection is now one of the largest in the world and ties together over 8 percent of the power plant capacity in the nation. The important fact to you is that through this pooling the companies can swap and share their power plant energy toward making maximum electricity available at minimum expense—which, in the end, gives you the best possible service at the lowest practicable price.

***BAKER'S DOZEN** Thirteen: From an old-time custom of giving extra measure to assure satisfied customers. Your electric company still believes in this extra measure, supplying not only electricity but community development, citizenship and leadership wherever it serves.

220,000-VOLT MASTER GRID

This high tension network makes it possible to send high voltage power back and forth between the 13 companies in the power pool. Ties with other grids in New York and in the New England states make it possible, in emergencies, to send electric power to places as far away as Canada.

PP&L an investor-owned, business-managed electric company
