

**Pastry Mix**

(From page 10)

Lemon juice and lemon rind, whip until stiff. Add cheese mixture slowly, continue mixing until thoroughly blended. Fold in cut-up apricots. Pour into crust. Garnish top with apricot halves and whipped cream. Chill in refrigerator until firm. Make 6 to 8 servings.

**Silo Clinic**

(From page 11)

Farmer will have to figure out the economics of making silage on his own farm to know whether he should or should not go into a silage program; whether he should own the needed machinery

or hire custom operators to do the work.

Burton Horne, extension agriculture engineer compared various types of harvesting equipment. He listed some advantages of the flail type chopper, but pointed out that length of the chopped material can not be closely controlled with this type of machine. He showed pictures of a flail type machine with a corn head attachment, but said over ten percent of the material coming through the machine was six to ten inches in length. However, he said some refinements in this type of machine are being made

Dr. John Bratzler of the

Department of Animal science and Nutrition, said acid and flavorings for silage preservatives have just about passed out of the picture. He said research has shown antibiotics have been of very little value as preservatives for grass silage. Sodium Metabisulfite and kyllage have given best results in tests.

Bratzler recommended wilting grass for silage and storing at about 65 to 72 percent moisture. If unwilted grass or direct cut grass is stored in the silo, Bratzler recommends 300 pounds of corn and cob meal per ton of grass. "Too many farmers are kicking a bag or two of corn and cob meal around over a load and thinking they are doing a pretty good job. It takes a pretty good amount to do the job"

Bratzler said his research showed less silo loss of grass silage with corn and cob preservative than with any other treatment

He said five rules for good silage are: plant a crop with good feeding value; cut at the proper stage of maturity, wilt the crop or add preservative; chop the material fine and pack it well, and supplement the silage with a good grain ration

John Baylor said averages from 2 years of forage testing at the Penna. State University have shown that corn silage is highest in total digestible nutrients but grass silages are high in protein content.

He said several factors account for the wide variation in the quality of forages tested at the University. He listed species of crop, maturity, preservatives, moist-

ure content, harvesting machinery and storage conditions.

To bring out the idea that every farm situation demands different treatment, A. R. Carlson, Agriculture Engineer said, "Ideas are like children. No matter how much we admire someone else's we can't help liking our own better."

The average size of super markets increased from 8000 square feet in 1948 to 17,000 square feet in 1959.

**Farmers Plan**  
(From page 13)

above average. Two-thirds of the acreage is expected for canning and the remaining for freezing.

At 1,500 acres, the lima bean crop will be harvested from 100 fewer acres this year than last and will be slightly more than one-third of the average. All but 100 acres are intended for freezing.

You get a bigger yield of better quality potatoes when soil insects are controlled with aldrin.

**POTATOES:**

One application of aldrin can protect potatoes against all major soil insects for the growing season

Aldrin offers one shot, low-cost control of pests that reduce yield and make culls out of salable product.

Read how aldrin can help bring you bigger, healthier yields.

Several major soil insects attack potatoes in various stages of growth. All cause serious damage.

A single application of aldrin made as an over-all treatment before planting controls them all for an entire growing season.

Aldrin protected potatoes consistently average enough extra bushels per acre to pay for the application many times over. What is more important, they grade better.

Use aldrin this year to insure better potato yields, and improve tuber quality.

Aldrin is available from your insecticide dealer under well-known brand names. It comes in liquid, wettable powder and granules—and in fertilizer mixes.

Shell Chemical, Agricultural Chemicals Division, 2299 Vauxhall Rd., Union, New Jersey

Agricultural Chemicals Division

Potato Growers: Aldrin is available in liquid, wettable powder, granules or have it mixed in your fertilizer at our Ephrata, Pa. Plant. Save time, labor and money with one easy application.

It's New from Wayne Research

**32% DAIRY KRUMS**  
plus your grain for  
Top Dairy Nutrition

Whatever your dairy feeding program, you can use new Wayne 32% Dairy Krums to good advantage. Just balance this blend of high quality proteins, vitamins and minerals with the nutrients in your own farm grains. Select the protein level that is right for the roughage used. Each cow will produce milk at her full bred-in milking power. And, the texture of ground and mixed rations is improved. Ask us for details.
