ing selling, etc
 "In spending, American farmers also lead all the nation with an outlay of \$25 to \$26 billion a year just to pay for the materials consumed in farm production—fertilizers, oils, etc—and another \$15 billion a year for food clothing and other consumer products
Food costs low

"If you've tagged the farmer inefficient, consider the facts. The farmer has quadrupled his output per hour

in the past 40 years — can industry say as much? He has increased his yield per acre by 58%—let industry try to match that.

"And in the past decade, when progress has been greatest, the farm worker's labor output has gained an average of 9% a year—industry's gain only 2½%

"Yet the metropolitan press, the U. S. Chamber of Commerce, the National Association of Manufacturers—they and thousands of others—have condemned the 'inefficiency' of the farmer,

the cost of farm programs, through farming is actually one of the least subsidized of all industries.

"And of all industries agriculture is the only one that has seen nothing but worsening depression ever since the end of World War II. Is that fair? And couldn't it be continued depression might have something to do with the more frequent recessions in our whole economy? Could be—in fact, we think it has."

Wildlife Book Is Available Through SCS

A new bulletin of value and interest to all farmers, sportsmen, shooting preserve operators and landowners is now available from the U. S.

Department of Agriculture. The bulletin is entitled "Making Land Produce Useful Wildlife", and was written by Wallace L. Anderson, a biologist for the U. S. Soil Conservation Service.

The new bulletin explains what is meant by a biologic balance and points out how good systems of farm and ranch management which employ sound soil and water conservation practices help to develop a favorable biologic balance.

A complete section of the bulletin deals with wildlife requirements. Another section deals with management of the land to meet these requirements and lists 30

sound conservation and land use practices which are helpful to wildlife on croplands, pasture lands, range lands, woodlands and wildlife lands.

There is a section of the bulletin devoted to the development and management of wetlands for the production of waterfowl and fur-bearers. Other sections illustrate how ditch banks, stream banks and odd areas may be wisely managed to conserve soil, water and wild life. Suggestions are made for the establishment of wild life borders, windbreaks, fence rows and hedges. Various species of grasses and legumes, shrubs and trees are discussed and recommended for use in different types of plantings. Planting arrangements, spacing and fertilization are also suggested.

The bulletin is well written and contains many photographs and drawings by Felix Summers. Copies of this publication may be secured by contacting your local office of the Soil Conservation Service at 439 North Duke Street, Lancaster. Ask for Farmers Bulletin Number 2035, U. S. Department of Agriculture.

Providence 4-H Hears Fireman

Many farms have fire ponds but very few have good roads to the ponds. New Providence 4-H members were told at their recent meeting.

Guest speaker, A. N. McConnell, president of the Willow Street fire company told club members most of the roads to farm fire ponds are not capable of holding the heavy fire fighting equipment, therefore, pumps are needed.

Miss C. Jane Henry, reporter for the club announces the next meeting of the club will be June 1 in the New Providence Elementary school.

CUT LABOR COSTS . . .

USE

WEEDONE LV4

(LOW VOLATILE ESTER)

- A more consistent weed killer under all conditions.
- More effective on perennial or harder-to-kill weeds.
- Excellent control of broadleaf weeds when used as pre-emergence on corn.

AMIZINE

A general weed killer for non-crop areas (CONTAINS NO ARSENIC)

Used around buildings, fence lines, driveways, outdoor storage areas.

- Effective almost anytime—does not need rain to activate it
- Easy to use—does not corrode spray equipment — odorless — does not stain metal, stone or concrete
