

Thousand Leggers—sprays are also moderately effective in reducing the millipedes outdoors. (From page 1)

by using a repellent an insecticide to greatly reduce their numbers. The effective repellents are things as naphthalene or dichloro-benzene flakes of these flakes should be raked into the soil for a distance of 6 inches to a foot from the foundation of the insecticide drenches or

Nicotine sulfate 40 percent (Black Leaf 40) used at the rate of 4 tablespoons per gallon, or lindane 25 percent wettable powder used at the rate of 6 tablespoons per gallon, are the most effective insecticides. These drenches can be most easily applied with a watering can. Two or more applications at 5 to 7-day intervals may be needed.

A combination of repellent plus insecticide drench will give the most satisfactory control of millipedes. However, control is slow and 3 to 6 days will be required before noticeable control can be observed, Lueck said.

ity and commercial bulls at 19.50-23. A few to 23.50. CALVES: 402. Compared to two weeks ago, Steady. Good and choice vealers at 27-32. Choice and prime 32-34.50. Odd head 36. Standard and low good 24-28. Utility 21-24.50. SHEEP: 76 Spring slaughter lambs 50 to 1 higher than two weeks ago. Few lots choice and prime. 60 to 95

lbs. Spring slaughter lambs 18.50-21.60. Good and choice 17-18.50.

County Jerseys Finish Records

A dairy cow does not have to be big to be efficient and profitable, says Edson W. Osborne, Peach Bottom Jersey Breeder.

Three cows at his Cornwall Farm have recently completed official production records giving them cow power index ratings. This rating indicates how many times her body weight the cow has produced during her recent lactation. The cows and their production are as follows: Gambo May Owl, 10,360 pounds of milk and 642 pounds (Turn to page 9)

Correct flowering stage to top and treat

TOBACCO GROWERS...

Eliminate Hand Labor, Stop Suckering Damage

- MH-30 when properly used will:
- Let you enjoy new freedom from suckering and hand labor
 - Let you produce tobacco at a lower cost
 - Increase the efficiency of the farm
 - Produce good tobacco

A fine mist spray of MH-30 on tobacco plants at full bloom stops sucker growth before it starts, reduces damage to plants from hand suckering and saves up to 30 man-hours of tedious labor per acre.

Why be old-fashioned... order your MH-30 from your farm dealer today and use it correctly:

- 1 Top and treat tobacco when it's in full bloom... or when 90% of the plants have begun to shed their first flowers
- 2 Use 1 pint per 1,000 plants
- 3 Use a fine-mist-type spray
- 4 Harvest only mature leaves

SEE YOU AT THE FISHING HOLE THIS SUMMER rather than in the tobacco field sweating over a back-breaking hand-suckering job
