MH-30

TOBACCO GROWERS...

Eliminate Hand Labor, Stop Suckering Damage

MH-30 when properly used will:

- Let you enjoy new freedom from suckering and hand labor
- Let you produce tobacco at a lower cost
- Increase the efficiency of the farm
- Produce good tobacco

A fine-mist spray of MH-30 on tobacco plants approximately 5 days after topping stops sucker growth before it starts, reduces damage to plants from suckering and saves up to 30 man-hours of tending labor per acre

Why be old-fashioned...order your MH-30 from your farm dealer today and use it correctly:

1. Top and treat tobacco when it's in full bloom or when 90% of the plants have begun to shed their first flowers
2. Use 1 pint per 1,000 plants
3. Use a fine-mist-type spray
4. Be sure to harvest your tobacco when it is ripe. Leaving an untreated row will help you in deciding when treated tobacco is ripe.

SEE YOU AT THE FISHING HOLE THIS SUMMER rather than in the tobacco field sweating over a back-breaking hand-suckering job.
