**(WISCONSIN) COMPARISONS OF DEKALB AND TEST AVERAGES**

|   | DeKalb 131 | Test Avg. (26 Entries) |
|---|------------|------------------------|
| Eggs (Hen-Day From Housing)                         | 278.4      | 255.0                  |
| % Large and Extra Large Eggs (Entire Laying Period) | 80.3%      | 76.3%                  |
| % Large and Extra Large Eggs—July 1961 (19 Days)    | 98.5%      | 94.3%                  |
| Feed Efficiency (lbs. Feed per doz. Eggs)           | 3.94 lbs.  | 4.29 lbs.              |
| Mortality (laying period)                           | 2.0%       | 12.6%                  |

**BREAK TEST RECORD**

DeKalb 131 Layers were at the top in the recently completed 6th Wisconsin Random Sample Test. Their total hen-day production from housing was 278.4 eggs . . . the highest record ever made in this test.

During the laying period of this 500 day test, 80.3% of the DeKalb 131 eggs were large or extra large; and in the final 19 days in July 1961, 98.5% were large or extra large. Mortality of DeKalb 131's at 2% was tied for the lowest in the test. Average of all 26 entries on mortality was 12.6%. Examination at the end of the test showed 47 of the 40 DeKalb birds to be in good laying condition. Comparisons of the DeKalb 131 Layers and the test average are shown on the left.

**New York Results Also Place DeKalb at Top**

Official Final Results of the 11th Central New York Random Sample Test which included 22 entries, are shown below.

|  | DEKALB            | TEST AVERAGE |
|--|-------------------|--------------|
| Best Income Over Feed & Chick Cost . . . . .     | \$2 952 . . . . . | \$2 317      |
| Greatest Hen Day Production . . . . .            | 249 8 . . . . .   | 222.8        |
| Most Eggs Per Pullet Housed . . . . .            | 242 6 . . . . .   | 213 3        |
| Less Pounds Feed Per Dozen 24 oz. Eggs . . . . . | 4.04 . . . . .    | 4.56         |
| No Broodiness . . . . .                          | 0 0 . . . . .     | 4 8          |
| Lowest Percentage of Blood Spots . . . . .       | 1.97 . . . . .    | 5.05         |

Results of 2nd North Carolina Random Sample Test (2 year-averages) show DeKalb produced the greatest number of eggs per pullet housed. Only one other entry showed better livability (6 500 days). And, only one other entry had better feed efficiency.
