

## Grain Program Available To County Farmers

Producers who participate in the 1962 Feed Grain Program are entitled to payments for diverting acreage from production of corn and grain sorghum according to Fred. G. Seldemridge, Chairman of the Lancaster County Agricultural Stabilization and Conservation Committee. Up to half of the estimated payment to be earned may be paid in advance when the producer signs up under the program.

Chairman Seldemridge said this program provisions should be of substantial benefit to growers who can use some extra ready cash during the spring planting season. Signup for the program runs from February 5th through March 30th.

The program offers payments to producers for diversion of feed grain crop land to approved soil conserving uses. The program is voluntary, but farmers who cooperate must divert a minimum acreage in order to be eligible for price support on the normal product-

ion of their 1962-crop corn and grain sorghum acreage.

Payments under the program will be in the form of a cash advance. Each county will have two county average rates of payment per acre for corn and two for grain sorghum. One rate will be based on 50 per cent of the county normal yield per acre times \$1.32 per bu. or \$2.05 per cwt.—the county support rates respectively, for corn and grain sorghum. The second rate will be based on 60 per cent of the county normal yield per acre times the applicable county support rate.

Farm payment rates will vary according to the farm's productivity in relation to the county average productivity and the number of acres diverted.

The minimum acreage for diversion from corn or grain sorghum will be figured from the "farm base" which is determined from the average acreage on the farm used in producing the crop in 1959-60. The minimum reduction is 20 percent of the base. The maximum depends upon the size of the farm base.

Farmers who are interested in participating in the '62 feed grain program should get in touch with the county Agricultural Stabilization

those extra calories. Individual action and thought must again make its debut if our national vitality is to be a healthy one.

After the speakers were finished with their presentation they left the rest up to the public. The cameras were turned on the obese ones—the ones opening cans of diet supplements, men exercising furiously in gymnasiums, ladies stretching in count with Debby Drake. These "Fat Americans" did a superb job of proving the doctors' points.

## Greer

(From page 5)

These foolish people who try to lose weight suddenly are jumping from the pot into the fire.

Weight losing must be a slow process. These foolish reducers who lose more than two or three pounds a week are often left with common diseases. A diet must be made on the basis of the

and Conservation Service of office at their earliest convenience.

person's physical needs that he must fulfill.

Americans should realize when they eat that extra piece of pie or drink that double-thick milk shake that they are only endangering their own lives as well as

endangering the health and welfare of our great country.

Let's think of the less fortunate individuals in the world who could really utilize the extra food that we are feeding ourselves.

## BALE TWICE AS FAST WITH HALF THE LABOR!

Today there's a new way to bale—that lets one man bale and load faster than a 2- or 3-man team! The new system consists of a New Holland Hayliner plus a simple, foolproof mechanism that "arhfts" the bales into a trailing wagon.

It costs surprisingly little. In fact, the Super Hayliner 69 gives you money-saving features like Flow-Action feeding, Tractor-Seat Controls, bale counter, pickup, guide wheel and sealed bearings, throughout as standard equipment. See us today for a free demonstration of the one-man haying system.

## ONLY Badger OWNERS

### FEED SILAGE LIKE THIS

This 11-inch Badger Feed King slotted tube feeder discharges silage simultaneously along the entire bunk in quantity never before attainable in a fully-mechanized, push-button system. . . . And it, or the standard 9-inch tube, handles any silage grain or ground ration—alone or in any combination, without separation. It's the most efficient mechanical feeder you can own!

Let Us Show You How Badger Equipment Can Give You Field-to-Feedlot Feed Handling WITHOUT LIFTING A PITCHFORK!
