From Where We Stand . . . Farmers Must Decide Who Sets Controls

Last week a group of Lancaster County farmers went on record as favoring a system of self-imposed controls on tobacco production.

We believe this is a step in the right direction

We think it is a step that should have been taken years ago.

Recently the Lancaster County topacco growers turned down the government control program for tobacco quotas

and marketing allotments We would not criticize any farmer tor voting his conviction If the Lancaster County farmers were opposed to the program, then they did the right

thing in voting it down

But it is well to remember what Secretary of Agriculture, Orville Freeman said at a press conference in the spring of 1961

He told newsmen that farmers had the privilege of voting down any proposed program, but if they did, they had better have a program to propose in place of it. Unless farmers come up with a workable program, they will get a program of some kind, he said.

This, we believe is logical pelieve farmers can no more go on producing commodities, giving no thought to the distribution and consumption of those products, than can general motors, or general electric, or any other manuacturing concern produce to the peak of their capacity without concerning hemselves with consumption

We believe farmers would do well to consider all phases of farm producion with the idea of planning producnon to meet the market, not only so far as quality is concerned, but taking into consideration potential of the quantity he market can absorb.

Any program that is self imposed has a better chance of keeping the effected persons happy than does a program mposed by some outside person or rgency

However, we believe the chances or success of the program are in a precarious position

Such experiments in the past have shown that farmers are reluctant to cooperate fully enough to make any voluntary program of production controls work

Read — And Heed —

Agriculture has recently released a Revised Handbook on Pesticide Recom-

There are those who would still have us believe the use of pesticides will put us all in an early grave

production of high quality foods in the United States, says Dr Dale Bray, University of Delaware entomologist They contribute to the most efficient agriculture in the world

They help to make Americans the healthiest and best fed people on earth

Pesticides can, and are, doing these things without endangering public heal-

We hope we are being too pessimistic, and that the farmers of the

county prove us wrong

We think the Lancaster County

Only with the cooperation of all tobacco growers can the program hope L

where we stand

Is Big Best?

We have heard it said time and again, "The big get bigger and the small get swallowed up"

The facts may seem to prove this but the implication is wrong

It is not bigness alone that guarantees the success of a venture, nor is it smallness alone that condemns a ven-

ness to prosper, and it is poor management and inefficiency that causes a business to close its doors forever

There is still, and in our opinion ets-in short, the entire Old Testa ion he gave the answer himself; always will be, a place for the small ment-in these two commands, in another, he got the answer out business that is run efficiently

And this includes the business of farming

When asked how many cows are needed for a profitable dairy operation tude." This is not quite fair, for if Deuteronomy or Leviticus? a Penn State University dairyman said love which is only an attitude, that chapter 6 in Deuteronomy recently, "It is not the number of cows that is important It is the number of pounds of milk each man can produce from his cows'

The specialist then asked three out- should be the atmosphere, the ble') there are some very pecustanding county dairymen about the size of their herds. These three men, tops in Dairy Herd Improvement Association records, normally milk 25 to 30 cows, and they do it with little or no outside labor

Wasted skills, wasted space, wasted macihnery, wasted time, or wasted production ability on the farm all result in wasted money, and wasted money need But God is never in need, for as yourself" does have force, results in failure of any operation.

At least that's how it looks from where we stand

That Pesticide Label

The United States Department of th, says Bray The important thing is to use them according to direction on the label There have been no cases of death or even illness traceable to pesticides used according to lable instruction, he says

There is really no problem with Pesticides play a vital role in the the pesticides on the market today Manufacturers are controlled too closely to put a harmful product on the mar-

It is simply a matter of reading the label and doing EXACTLY as it

At least that's how it looks from where we stand
