Food Survey Is Begun By Agri. Dept.

HARRISBURG—The Pennsylvania Department of Agriculture scored two national "firsts" today with the publishing of a study of wholesale food handling in the Scranton and Wilkes-Barre Metropolitan Areas.

Agriculture Secretary W. L. Henning said the study was the first of its type to be completed by a state department of agriculture. It was also the first time that a study of food marketing facilities had been made on a regional rather than a single-city basis.

The 55-page pamphlet contains maps, photographs, statistical charts and text to describe the physical facilities, labor costs and business volume of the wholesalers along with recommendations for improving market efficiencies. Data was obtained through interviews of all known wholesalers and from railroad freight agents, governmental sources, the Scranton Redevelopment Authority and the Wilkes-Barre Redevelopment Authority.

The report recommended that new wholesale food handling facilities be developed in the two areas studied, and alternate choices were suggested for separate city facilities or a regional market center. The combined metropolitan areas include the entire counties of Lackawanna and Luzerne. Redevelopment plans in both Scranton and Wilkes-Barre call for relocation of major segments of the wholesale food trade.

Henning said that copies of

the report were scheduled to be presented formally today in Harrisburg to Victor C. Diehm of Hazleton, president of the Northeast Pennsylvania Industrial Development Commission, and Bernard B. Bher, executive director of the Scranton Redevelopment Authority. The two agencies had requested the survey.

"In addition to the immediate problem of urban redevelopment," Henning said, "we feel the data will be useful in planning long term economic growth of the region."

The author of the report was Maurice M. Martin, agricultural economist in the Bureau of Markets. Several marketing specialists assisted in the study which was financed with matching state and federal agricultural funds. Key recommendations of the survey were:

Facilities should be developed to accommodate about 28 Scranton wholesalers and 23 Wilkes-Barre and Hazleton wholesalers. To accommodate the volume of business done

by the 28 Scranton wholesalers it is estimated that a minimum of 11 acres of land would be required with adequate off-street parking space. Wilkes-Barre wholesalers would require about nine acres of land.

The location of new market facilities, whether on a se-

parate or regional basis, should take into account: (1) convenience for local buyers, (2) convenience for rail motor truck receipts, (3) the location that will avoid non-market traffic and (5) availability of land at a reasonable cost.

POWER PATTERN . . . Russian workmen erect a modernistic framework for a new open-hearth furnace steel mill being constructed somewhere in the Urals.

LAY-BITS

FLOW FREELY AND CUT YOUR FEED COST

EASTERN STATES LAY-BITS are an entirely new concept in layer feeding. Introduced in scattered test markets only this past winter, demand has spread so rapidly that they are now being made available everywhere.

EASTERN STATES LAY-BITS are free-flowing crumbles . . . best for bulk bins and automatic feeding. Layers scramble for their share of high energy LAY-BITS yet wastage is minimum.

Poultrymen are extremely pleased when they compare the very favorable LAY-BITS price with their excellent egg production and good layer health. They also like the way LAY-BITS handle so freely through bulk bins and automatic feeders . . . a mighty important point in this new concept of layer feeding.

Why don't you, too, become a LAY-BITS feeder and have the advantage of excellent production, fine layer health, and all the economies of completely automatic feed handling?

Complete automatic feeding for DAIRY COWS and CATTLE!

VanDale SILO UNLOADERS

Double augers deliver more silage per minute even when silage is deeply frozen . . . and at a lower operating cost. Patented V-paddle impellers throw . . . not blow . . . silage down chute. Adjustable drive hubs give positive traction in all types of silage.

Three-point suspension keeps unloader level at all times.

Plus a complete line of bunk feeders to meet your exact needs

Straight-out Auger Feeder

With VanDale units you can custom build the bunk feeding set-up to fit your needs. Drive section includes hopper, drive assembly and 10' high capacity 9" auger. Additional auger sections are in 10' units and are easily coupled.

Feed-R-Flo Bunk Feeder

The new, all-metal complete feeder. High capacity 9" auger rotates within tube. Gives all-weather protection, even feed distribution, and lower operating cost.

Conveyor Trough

An important link in automatic feeding. Positioned below allo chute, the VanDale conveyor trough carries the silage to the bunk feeder. Primary section includes hopper, drive assembly, and 10', 8" auger. Additional 10' auger sections may be added.
