 Give a new and tasty addition to the diet of the calorie-conscious commercialization of the water will provide a new outlet for these important farm commodities.

These potato-dairy waters are made by whipping an into a mixture of mashed potatoes and, nonfat milk then adding salt and other flavoring agents. The whipped dough-like mixture is forced through a squeegee press onto a screen in the form of a ribbon which is then cut into water size dried and roasted to a light brown.

KEEP NON-FAT DRY MILK HANDY

Dry milk is one of the easiest items you can keep in your cupboard. If you don't use it every day keep it there for emergencies — times when the children have drunk up every last drop of fresh milk and are clamoring for more. Or for use in cooking—when there's no fresh milk in the house and no time to run to the store.

It's also marvelous for hunting and camping trips. It's easy to carry and easy to reconstitute. For a hearty cold-weather drink, boil water su-

per and cocoa then add the dry milk and serve. In the summertime, get a refreshing pick-up by adding cold spring water to adult dry milk.

About New Fibertill

Kodel polyester fibertill makes fluted washable coverlets, coverlets and pillows. This fibertill is soft yet springy and highly resistant to marring and crushing. Kodel fibertill is very lightweight but warm because of its built-in fluffiness.

Kodel polyester fibertill is washable, doesn't shrink, dries quickly and bounces back to its original fluffiness after washing. Also the fibertill is odorless, dust-free, non-allergenic and moth and mildew resistant.

Kodel polyester fibertill has been designed to give excellent performance in home furnishings products where it can be used. To identify such use-approved items, look for a label that states "This item certified to contain one hundred per cent virgin Kodel polyester fibertill."

This and That

The most accurate report of birth weights of babies was

published in 1815. But it wasn't until the middle of the last century that the weighing of infants was suggested. At this time weighing was suggested as a useful means of evaluating the nutritional and physical development of infants.

You can hasten reheating of frozen main dishes when you package the food in layers. Pour the mixture into quart containers in layers and separate each layer with a double thickness of cellophane or freezer paper.

This makes it easy to break the block apart and shortens reheating time. It's estimated that the nutritional elements in one quart of milk would cost more than forty cents if duplicated by other foods.

Nutrients in Milk

One reason milk is such an excellent food is that it contains many different nutrients in favorable proportions. Louise Hamilton, Penn State extension nutrition specialist points out. This enables milk nutrients to form efficient work teams with nutrients in other foods for the body's nutrition. Milk is outstanding for calcium, riboflavin and protein.

Farm production per man hour has increased 90 percent in the last 10 years.

potato pests can't hide from Phosphamidon

You've probably read about the insect-seeking Killer-ORTHO Phosphamidon. We have it. We've seen it work. We recommend it for eliminating potato pests. Here's why.

Wherever insects hide safe from other sprays (under the curl of a leaf, in crevice of a stalk) Phosphamidon hunts them down. And kills them. Phosphamidon kills on contact. But, it doesn't have to. It is absorbed by the foliage and penetrates the entire upper part of the plant system. Result: a "remote control" kill that gets the hidden insects other sprays miss.

The list of insects reads like an encyclopedia of potato pests: Colorado potato beetle (even the resistant one), all varieties of aphids, flea beetles, corn borers, leaf hoppers — just about every insect that chews or sucks. What's more, most insects that are resistant to other sprays find Phosphamidon irresistible.

Phosphamidon is absorbed so quickly that workers can enter the fields a few hours after spraying. And the natural predators that feed on harmful potato insects can safely return too.

Don't spray money away, hit or miss, with ordinary sprays — come in or phone us for your Phosphamidon requirements. With Phosphamidon you just can't miss.

GREATER YIELD FROM EVERY FIELD

WITH

FERTILIZERS

Every Miller-grown crop is a "money crop." Miller gets your crops off to a great growing start . . . grows 'em sturdy and strong. Miller crops give greater yield for every field . . . and you harvest the profits.

Miller products are produced locally by agricultural experts who know your growing needs. Call us at any time for free technical advice; ask about our low-cost spreader service.

- BULK LOADING FACILITIES ● SPREADER SERVICE
- FREE TECHNICAL ADVICE ● PROMPT DELIVERY
