

DHIA RECORDS TELL SUCCESS STORY

MILK PRODUCTION UP 1441 lbs.

BUTTERFAT UP 82 lbs.

Reprinted From
"THE GOLDEN GUERNSEY NEWS"
July 1962 Issue

The Guernsey herd of Francis and Ethel Kirk, Peach Bottom, Pa., has certainly shown a tremendous amount of improvement the last two years. Last year, on DHIA test, the herd increased 1441 lbs. of milk and 82 lbs. of fat, and this year, in the first seven months, the herd average has increased another 40 lbs. of fat. Foregoing any change in the present production, the herd should finish with well over 10,000 lbs. of milk and over 500 lbs. of fat. Their young sire, Carroll's Rob, has been one of the big reasons for this tremendous improvement. He was bred by Lloyd Balderston III, Colona, Maryland.

FRANCIS and ETHEL KIRK say

. . . we're convinced that Farm Bureau's DARI-PAK PELLETS make more milk and they are economical, too. Our income over feed cost is UP \$46.00 per cow over last year. Our cows really go for those pellets. They clean them up quickly and completely — no feed waste or spoilage here. The Grain Exchange Program, which gives us FULL RETAIL PRICE for our home grown grain, is a great thing. In short, we're more than pleased with the Farm Bureau Dairy Feeding Program.

We at FARM BUREAU say

Francis and Ethel are milking a fine herd of "68" Guernseys. Their excellent breeding program and terrific management have played the key roles in their success. As mentioned in the Golden Guernsey News, they have an outstanding young sire, Carroll's Rob, who has proved to be a real asset. Of course, we're mighty proud that Farm Bureau's DARI-PAK PELLETS, carefully formulated and balanced with the proper milkmaking nutrients, helped the Kirk's accomplish their very excellent record.
