

MECHANIZED FEEDING BY STARLINE

The STARLINE Silo Unloader features dual collector augers, Twin Drive drums and rotary impeller for positive feed unloading Winter and Summer.

Throws down grass or corn silage in any kind of weather.

Starline Unloaders fit all silo sizes from 12' to 20' diameter.

Add a Starline Auger Bunk Feeder and you'll have MECHANIZED FEEDING from your Starline Labor Savers. They're Time Savers, too!

● Have You Heard?

(continued from page 15) trition conscious when they shop for food. Last year, the average American shopper spent a dollar this way . . .

cents for vegetables and fruits; and poultry; twenty-three cents for dairy foods; sixteen cents for bread and cereals; and eight cents for miscellaneous products. Consumers usually spend about

one-fifth of the food dollar on dairy foods, one of the basic four food groups recognized as the foundation for a good diet.

Almost half the nation's milk supply is used as fluid milk and cream. The other half is used in the manufacture of ice cream, butter, cheese, nonfat dry milk, and many other dairy products.

The average American likes American cheese better than ever . . . he ate slightly more than five and a half pounds of it during 1961 — this was an all-time high figure. He also ate plenty of other kinds of cheese so that during the year his total use of cheese was eight and a half pounds.

Beautiful Layer Cakes

Use the pan size as directed in the recipe or on the cake mix package. If the pans are too small, the batter may run over the edge. If the pans are too large, the layers will be thin and have poor volume.

Layer cakes will have a more velvety, fine-grained texture if you bake them in pans with straight sides.

Points On Points For Tractor Mechanics

Although it's usually advisable to install new breaker points in the distributor when servicing a tractor engine you may sometimes find it necessary to clean and adjust the old ones due to an emergency.

Should emergency service become necessary, agriculture engineers offer the following advice on this subject.

When working on the points be sure to use crocus cloth as the buffing agent. Sandpaper or other abrasives may damage the contact surfaces and leave minute particles of abrasive in the distributor or magneto which can cause excessive wear.

After re installing the points, clean them thoroughly with a strip of lint-free tape moistened with ether or an equivalent solvent.

Pull the tape back and forth across the contact to remove foreign material then repeat the process with a dry cloth to remove all residue and moisture from the contact surfaces.

Taking the time to perform this operation will pay dividends in longer point life the engineers say, since one of the major causes of point oxidation is improper cleaning.

New points, too, should always be cleaned after installation. This is necessary because a fine film of oil left by the fingers can contact the point surfaces, causing rapid oxidation.

If contamination from oil or grease should present a chronic problem, the trouble could be a worn distributor drive shaft bushing. An excessively worn bushing may let oil fumes from the oil breather cap enter the distributor through the distributor cap vents.

Also, using the wrong type of lubricant on the cam may result in point contamination, especially if it melts at high temperature. Special lubricants, available for distributor cams, minimize this problem.

PEPPER UPPER

Best way to brighten up a drab yard is to install an interesting gazebo which will function as a sunshade for loungers. Build the gazebo out of light-weight western red cedar lumber.

1962 Special Cattle Sales

Abingdon Livestock Market, Inc.
