

Holstein had injured her udder. A shot in the hip and treatment in the teat canal with antibiotics were prescribed. A second cow had an inflamed udder and poor appetite. A test of the urine showed no symptoms of acetonemia and no problems could be heard in the chest cavity. The problem of blood in the milk was assumed to be connected with swelling which went along with calving. A shot in the hip to perk up the appetite and local udder treatment with antibiotics completed the treatment and we were ready to wash our boots again and be on our way.

Two stops to check and treat cows with breeding problems and, one cow with a crushed teat which had to have the end severed, brought us to lunch time.

We returned to Quarryville and ate our sandwiches along with delicious soup served by Mrs. Betty McMullen. Dr. Schmuck prepared some worm medicine for my pony, and we were on our way again.

At the Stoner farm, after we "rolled" the cow, Dr. McMullen dehorned four heifers and vaccinated two for Brucellosis Abortus. Dr. McMullen said he thinks this vaccination program, which is paid for by state funds, has done more for the health of the state dairy herds than any other one program. Practically every dairyman in the county now has his calves vaccinated between four and six months of age, he said.

(Continued on Page 8)

WE WASHED OUR BOOTS about a dozen times it seemed. After every call, boots were washed in a disinfectant solution to keep from carrying disease from one farm to another. This becomes almost a ritual and is never overlooked. Medicines, veterinary equipment and radiophone equipment almost fill the trunk of the car.

L. F. Photo.

ACETONEMIA IS DETECTED BY the presence of ketone bodies in the urine of the cow. Dr. McMullen tests a sample of urine to determine whether the cow is suffering from acetonemia. When he found no trace of the disease, he conducted other tests to determine the ailment.

there IS something new for you...  
and EHRlich's has it!

The Revolutionary New  
**PLASTIC GREENHOUSE**

Get Mature Plants and Ripe Fruit  
Weeks Ahead Of Unprotected Plants!

- ★ Portable ★ Durable ★ Low Cost
- ★ Easy To Erect

Ideal For Professional Growers—Nurserymen—  
Farmers and Home Gardeners.

It's a new idea—using time-tested principles—but eliminating the high cost and space factors which ordinarily limit the amount of plants which can be grown the "greenhouse" way. Consisting of lightweight curved plastic pipes with a plastic center-

stabilizer—plus tough plastic film—the Magic Circle plastic Greenhouse can be set up anywhere, in any size—and at wonderfully low cost. You owe it to yourself to check its advantages!

Available In Complete Kits  
25 - 50 - 100 Feet Long

Approximately 2 Feet High—6 Feet Wide

**Easy To Erect And Maintain**

The simple construction and pre-formed, lightweight framing makes the Magic Circle Plastic Greenhouse simple to use and virtually trouble-free.

**Can Be Irrigated And Ventilated**

All you need to irrigate is to tie standard sprinkler hose to center stabilizer. To ventilate—all you need to do is lift the ends for as long as necessary.

**Can Be Used Over And Over Again**

This is not a one-time use, throw-away product, but a sturdy piece of equipment made to be used year after year.

**Low Original Cost—Low Upkeep Cost**

Because it is simple in design and concept, the original cost is low. Because it is made of sturdy plastic there are no worries about rust or easy breakage.

**TWO MORE GROWING AIDS**

**RABBIT REPELLENT**

Effective  
Economical  
Safe  
Easy-To-Use  
Friendly

Protects trees, flowers, shrubs and vegetable gardens from rabbit damage.

**ANIMAL REPELLENT**

Chases  
Dogs—  
Cats, Deer  
Sheep, Skunks  
Raccoons

Keeps animals away from lawns, trees, shrubs, flowers and vegetable gardens.
