

Manor FFA On Vacation

Nine Future Farmers from the Manor chapter, along with their teacher of vocational agriculture, Garland Gingerich are spending the week at Wildwood, N.J., as a reward for group project work in high school.

The boys raised tobacco on the farm of Aaron Herr, Millersville R1, and corn on the farm of Henry Herr, Lancaster R6, to earn expense money. All travel expenses, food, and even pocket money was paid out of the group treasury.

The boys are staying in the trailer of Mrs. and Mrs. Henry Herr, and a motel — taking turns sleeping in the air conditioned motel. The boys are having a great time, Gingerich said, cooking some of their own meals and eating typical teenage meals of cheeseburgers, steak sandwiches, pizzas and ice cream the rest of the time.

The boys are Robert Best, son of Mr. and Mrs. Joseph Best, Holtwood R1; Harold Herr, son of Mr. and Mrs. Aaron Herr, Millersville R1; Larry Hess, son of Mr. and Mrs. David Hess, Lancaster R6; Jack and Jere Herr, sons

of Mr. and Mrs. Henry Herr, Lancaster R6; Jerry Breneman, son of Mr. and Mrs. Martin Breneman, Lancaster R2; Robert Harnish, son of Mr. and Mrs. Paul Harnish, Pequea R1; Richard Groff, son of Mr. and Mrs. Ira Groff, 1908 Blue Ridge Drive, Lancaster; and Raymond Souders, son of Mr. and Mrs. Henry Herr, Conestoga R1.

A simple moisture test for silage is to squeeze a handful. If it springs right back it's too dry. If it comes back gradually it's just right. If it remains in a compact mass it is too wet.

Lampeter YFA Tours Delaware

Fifty seven persons, including members of the West Lampeter Young Farmers Association and members of their families, toured spots of interest in Delaware and Chester County this week as part of the group's annual educational trip.

The tour stopped at Winterthur Farm and the Chrysler assembly plant near Wilmington, Delaware, and the Long-

wood Gardens in Chester County.

Next meeting of the association will be the annual summer picnic on August 22.

Appliance Gift

When selecting a small electric cooking appliance for a gift, consider versatility, suggests Helen Bell, Penn State extension home management specialist. An appliance that will do many different jobs may be a better choice for a newly married couple than an appliance that does only one job.

Automatic manure removal...frees you for other work

HARVESTORE® Orbital Cage Layer System saves labor, minimizes odors, practically eliminates fly problems

Removing manure from a cage-layer house is no longer an unpleasant job...or any job at all. That's because—with a HARVESTORE system—manure is removed both *automatically* and *frequently*.

Automatic removal frees you or your employees for more profitable work. You don't have to constantly check the manure operation as in other systems. In fact, you don't even have to push a button.

Frequent removal gets the manure out of the house before it can cause much odor or attract flies. And the power requirements are low. A single, 1/2 hp motor per bank handles the job.

In the HARVESTORE system, feeding, watering and egg gathering are also automatic. Feeders revolve or "orbit" around each 4-deck, 2,880-bird unit on a monorail, delivering feed to each cage for 2 1/2 out of each 14 minutes. The pay-off can be lower per-bird-building costs, increased egg production, better feeding efficiency, and minimum labor requirements.

See how you can gain these advantages in your operation. For more information, return the coupon.

Squeegees (attached to feed carriages) deposit droppings in sub-floor gutters at each end of the system. Gutters slope downward to outside storage pits for easy removal.
