Foot-and-mouth disease has been kept out of the United States since 1929, although it occurs in many countries of the world. This disease is highly contagious to livestock, and the Plum Island laboratory, off the northeastern coast of Long Island, is the only place in the United States where experiments with foot-and-mouth disease are permitted. The laboratory was established in 1954 to aid in USDA's efforts to keep foreign livestock diseases out of this country.
