Have You Heard?

(Continued from Page 7) four million were disabled in home accidents. This makes it all the more essential that each family check its house to see if it is a safe place to live.

Faulty facilities and furnishings often cause accidents. Light bulbs that need replacing, a fragile stepstool, slippery floors, or broken glass are all potential accident hazards.

Activities done in the kitchen make it the most dangerous room in the house. Kitchen utensils and tools are safe only when they are used and cared for properly. To prevent accidents, turn handles of cooking utensils away from edges of range. When using knives, cut away from the body. Sharp knives cut more easily and require less pressure than do dull knives.

Plan enough time for daily activities. By allotting enough time for a job a homemaker could eliminate the rush and disorder that may cause accidents. Homemakers should observe the activities of family members and encourage members to develop safety habits. The best way to prevent home accidents is to spot hazards and remove them before they cause trouble.
