

## Goddard Urges Trash Clean-Up

Forests and Waters Secretary Maurice K. Goddard today urged all state citizens "to clean up trash and debris along all our streams and rivers.

Secretary Goddard said "good housekeeping practices" would "go a long way" toward preventing a rash of woods blazes as the forest fire season ap-

## Forest Crews Fight Fires With Fertilizer

HARRISBURG — Strange as it may seem, the State Department of Forests and Waters has been very successful in using a liquid fertilizer as a fire retardant over the past several years.

R. M. Coy, a forester in the Forest Protection Division of the department has written an article for the Forest Service's publication, Fire Control Notes, in which he explains how the retardant is utilized.

A fire retardant, in its simplest action, renders a combustible just about non-combustible. Basically, the fertilizer used by the department is ammonium salts.

The retardant is mixed in varying quantities in the water—the mixture runs from five of water to one of retardant, to ten of water to one of retardant.

"Smokechaser" crews can pack five gallons of the mixture on their backs in pumper-tanks and head for a point at which they want to halt the spread of flames.

The mixture is also put into air attack planes that sweep over forests dropping the liquid at designated targets of fire. The department uses planes that can carry up to 1,600 gallons for smothering blazes.

A fleet of fire-fighting vehicles carrying large tanks can also transport the retarding mixture swiftly to appropriate fire control points.

Addition of retardant to water increases its effectiveness, since, once the water evaporates the fire will continue, but the retardant remains in the potential fuel until weathered or leached away.

proaches.

"The recent high water deposited quite a bit of trash and rubbish along the streams and rivers of the Commonwealth," Goddard said. "If this debris is removed and burned under adequate care and supervision, it will mean less chance for forest

fires to start, and less for the fires to feed upon."

Goddard also asked that, as the fire season does near, that all state residents be especially careful with fire. "As the water in our forests decreases from winter precipitation, the chances of fire increase," he said.

Goddard said that, in those cases where large amounts of

trash and rubbish are burned, extreme care be exercised in order that the fires "do not get out of hand."

"Fire does not differentiate between good intentions and human carelessness," he said. "Being careful with fire is the only way to work around lands. We have natural in our forests that are of many other states

## Complete automatic feeding for DAIRY COWS and CATTLE!

### VanDale SILO UNLOADERS

Double augers deliver more silage per minute even when silage is deeply frozen... and at a lower operating cost. Patented V-paddle impellers throw... not blow... silage down chute. Adjustable drive hubs give positive traction in all types of silage.

Three-point suspension keeps unloader level at all times.

### Plus a complete line of bunk feeders to meet your exact needs

#### Straight-out Auger Feeder

With VanDale units you can custom build the bunk feeding set-up to fit your needs. Drive section includes hopper, drive assembly and 10', high capacity 9" auger. Additional auger sections are in 10' units and are easily coupled.

#### Feed-R-Flo Bunk Feeder

The new, all-metal complete feeder. High capacity 9" auger rotates within tube. Gives all-weather protection, even feed distribution, and lower operating cost.

#### Conveyor Trough

An important link in automatic feeding. Positioned below silo chute, the VanDale conveyor trough carries the silage to the bunk feeder. Primary section includes hopper, drive assembly, and 10', 9" auger. Additional 10' auger sections may be added.

## GET RID OF FLEA BEETLES On Potatoes

Ask us about

### Phosphamidon

Phosphamidon actually hunts pests down on to plants. It kills them wherever they're hiding under the curl of a leaf — in the crevice stalk.

This is because Phosphamidon doesn't kill by contact alone. It's absorbed by the foliage and through the entire upper part of the plant system. That means it kills hidden insects other species miss. Phosphamidon gets rid of Colorado potato beetles, (even the resistant ones) — as well as leaf beetles, leaf hoppers and all four kinds of aphids that attack potatoes.

Phosphamidon is absorbed quickly, too, so workers can enter the fields just a few hours after spraying. Don't take chances on missing potato pests. See us now for ORTHO Phosphamidon.
